# About That Timing...

□ Timing is good because:

- DRAM is running out of speed
- NVDIMMs are catching on
- Some sysadmins understand how to use flash to reduce DRAM needs

□ Timing is bad because:

- Nobody can make it economically
- No software supports SCM
- New layers take time to establish

# What 3D XPoint Means To You

- ❑ Better cost/performance ratio
- ❑ Lower power consumption
  - ❑ Less DRAM
  - ❑ More performance per server
  - ❑ Lower OpEx
- ❑ In-memory databases start to make sense
