

STORAGE DEVELOPER CONFERENCE

BY Developers FOR Developers

Windows Protocol Test Suites

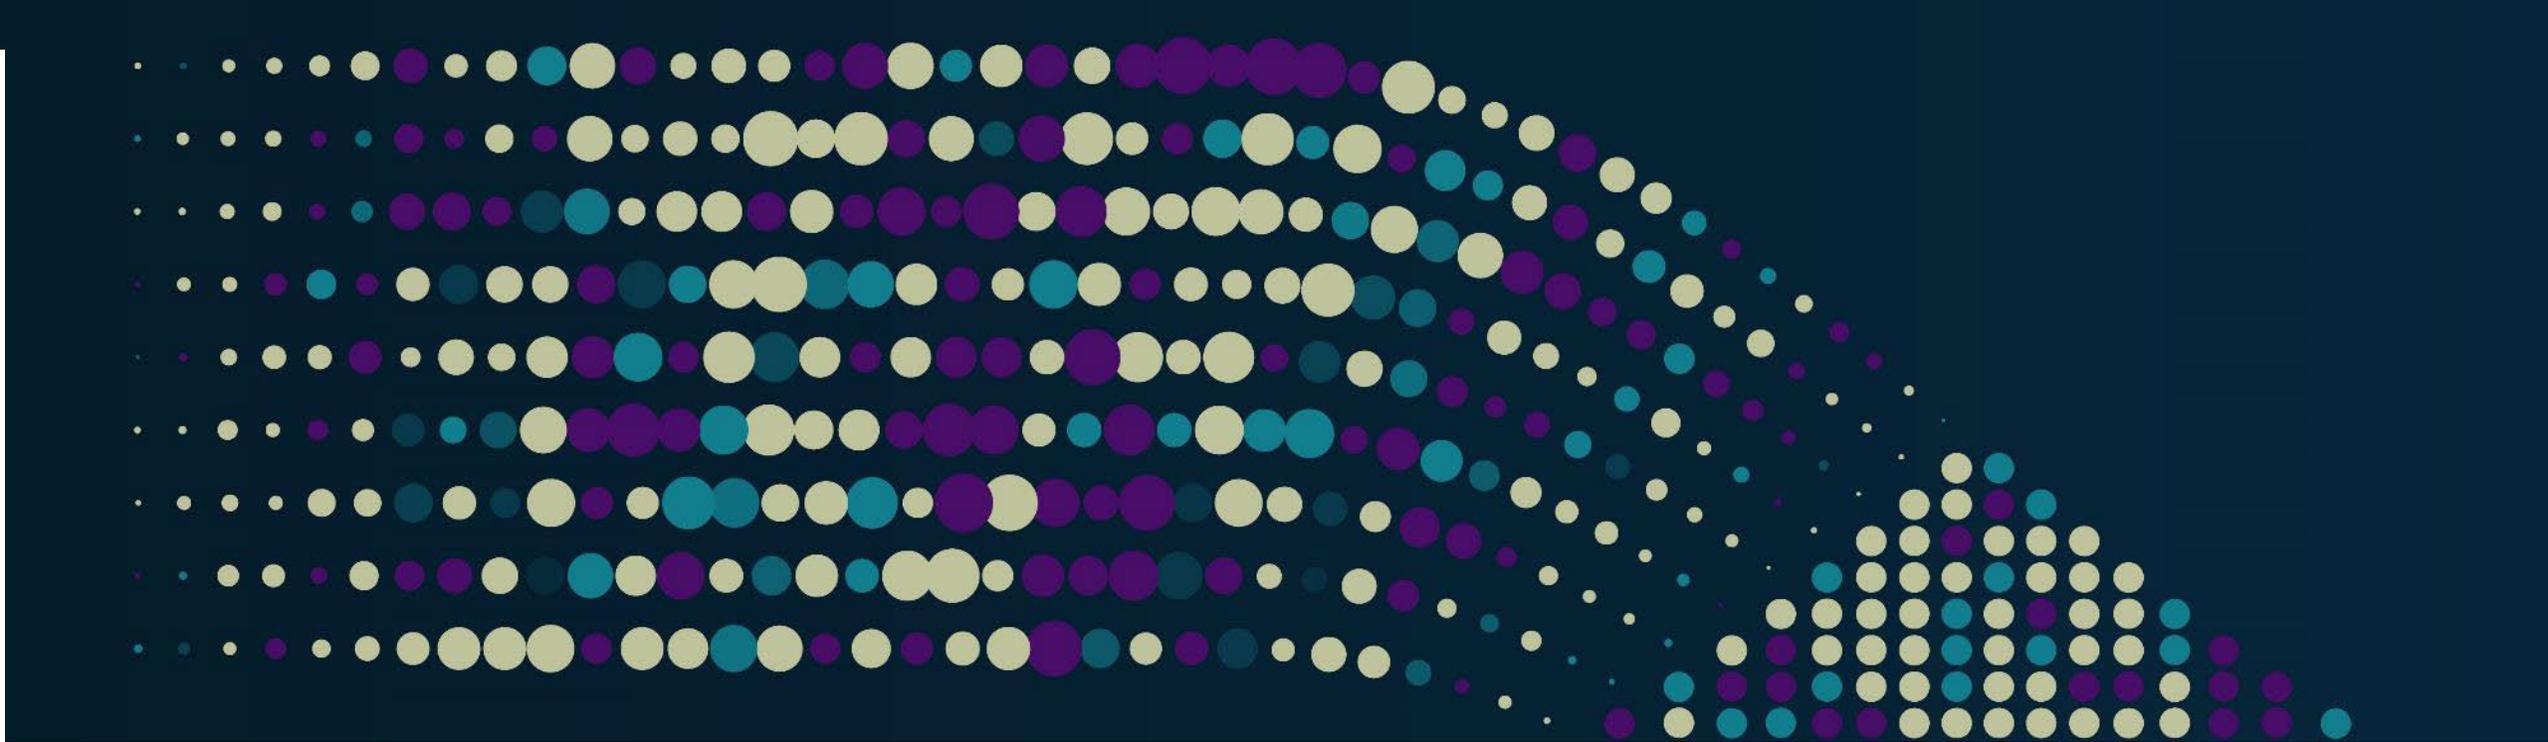

Architecture, design, and usage for testing protocol
implementations

Presented by

Obaro Ogbo
Senior Software Engineer
Microsoft

Agenda

- Background
- Test Suites Architecture
 - Application Design & Architecture
 - Test Case Design
 - SUT Control
- Usage
 - PTM Service
 - PTM Cli
 - Docker Image

Background

Windows Protocol Test Suites

Background – Interoperability

- Open connections to Microsoft products
 - Open protocols
 - Open APIs
 - Open Access
 - Open Source Compatibility
- Support for standards
- Data portability
- Open engagement

Background – Windows Protocols

Evaluates whether a protocol implementation meets certain interoperability requirements.

- Originally developed for in-house testing of Microsoft Open Specifications.
- Used to test/verify Windows behavior.
- Also used to test 3rd-party implementations.

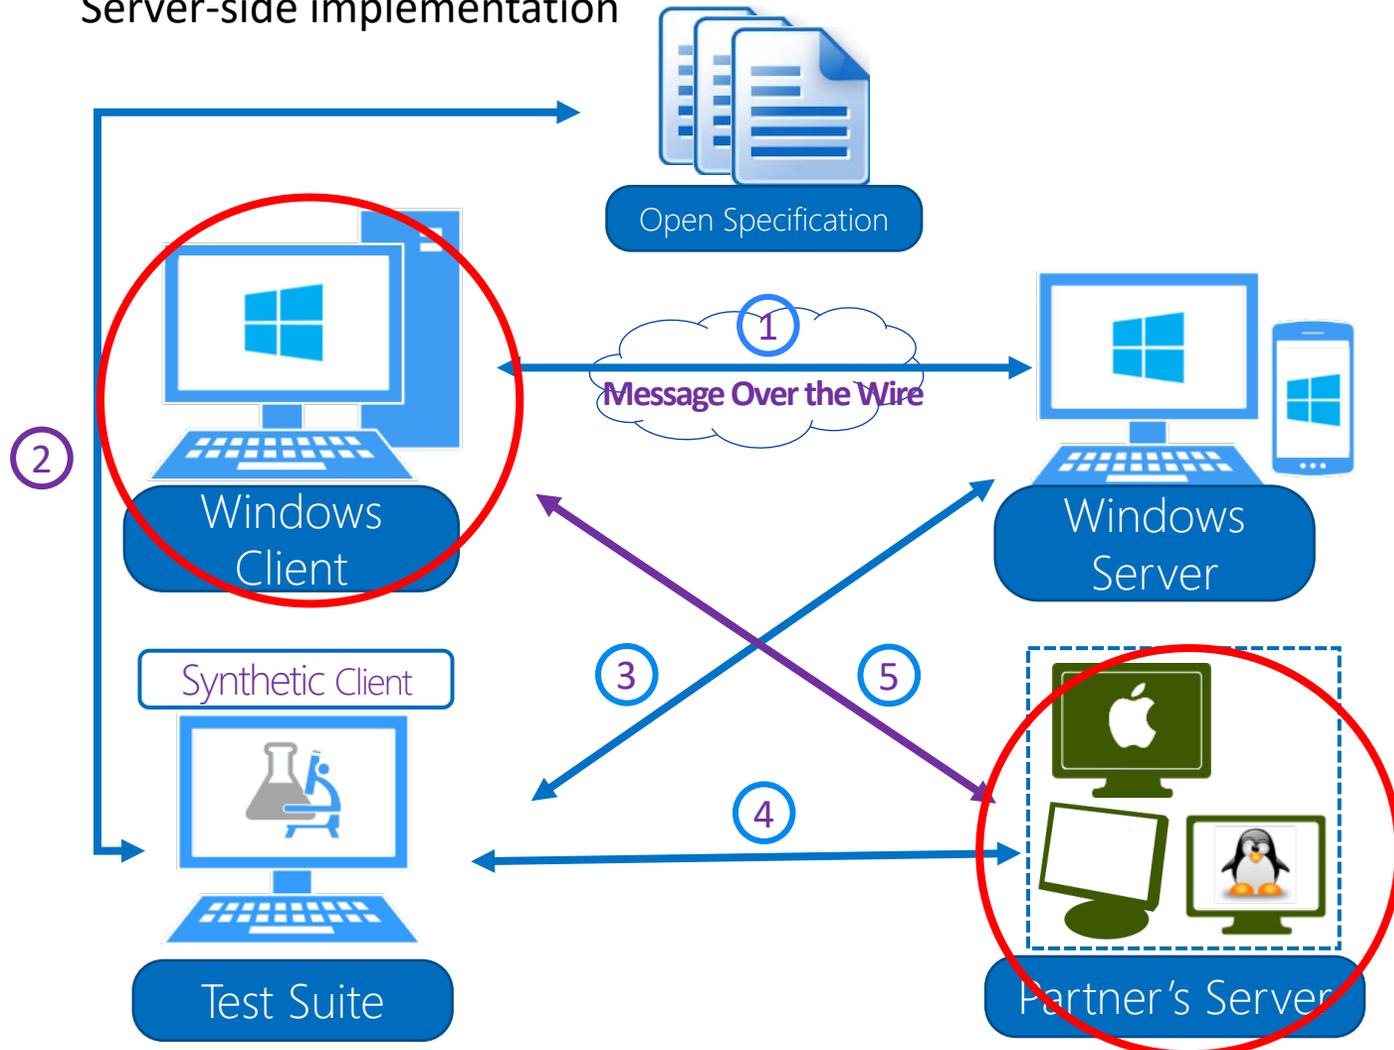

Do not cover every protocol requirement, and do not certify an implementation, but can be a useful indication of interoperability.

Background – Test Suite Goals

- Open Source – <https://github.com/microsoft/WindowsProtocolTestSuites>
- Cross platform
- Protocol features as tests
- Open spec docs – https://docs.microsoft.com/en-us/openspecs/windows_protocols
- Multiple protocols – RDP, SMB2, ADFamily, etc

Background – Protocol Test Methodology

Server-side implementation

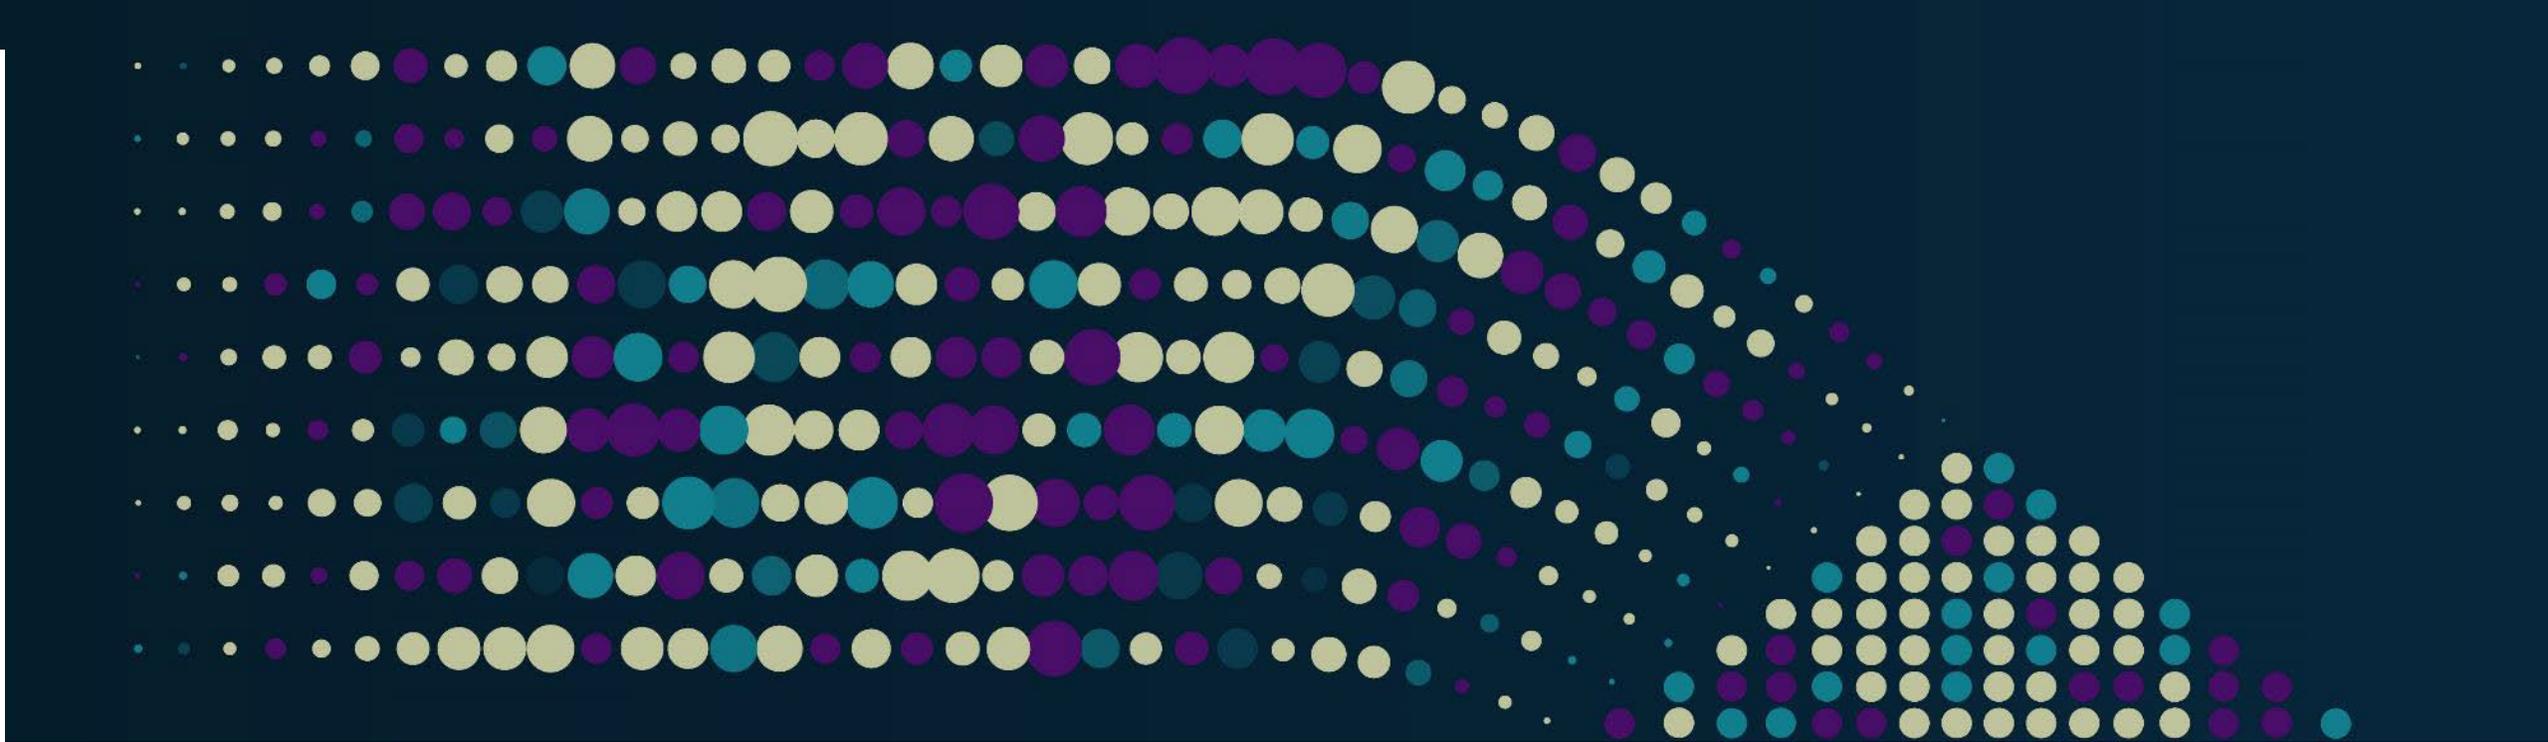

1. Open Specification defines messages, sequences, behaviors

2. Develop protocol test suite (synthetic client) according to Open Specification

3. Run against Windows to verify Open Specification

4. Run against 3rd-party implementation to help identify & debug issues

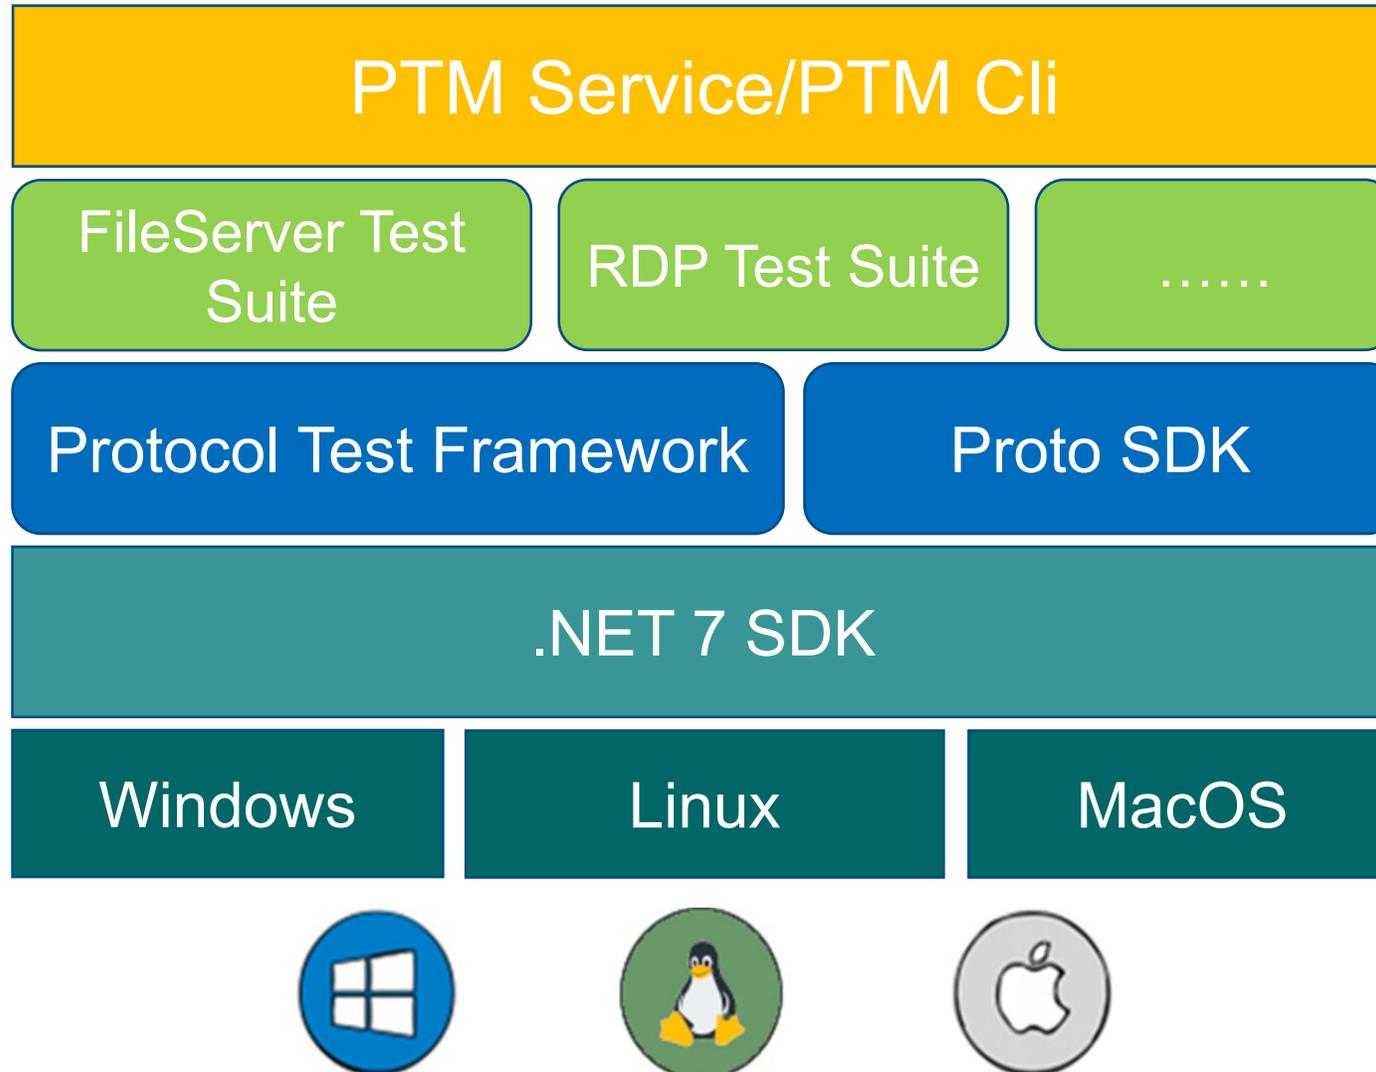

5. Interoperability between partner's server and Windows client

Architecture

Windows Protocol Test Suites

Architecture – Design

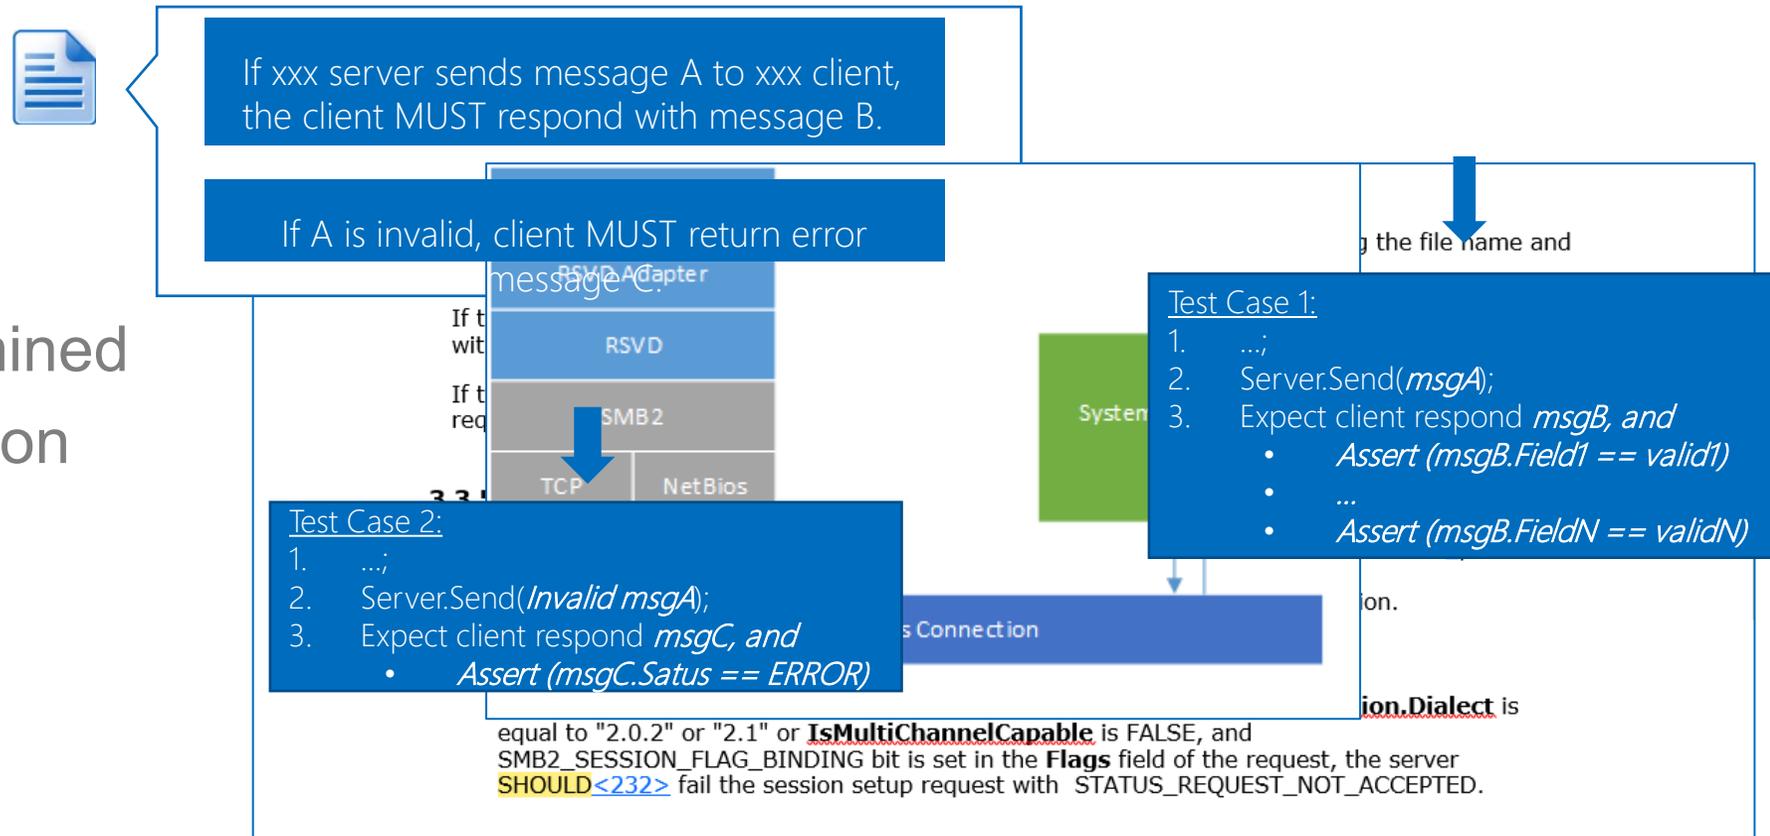

Architecture – Test Case Design

- Design

- Test cases
- Architecture
- Interfaces
- Consider undetermined partner implementation

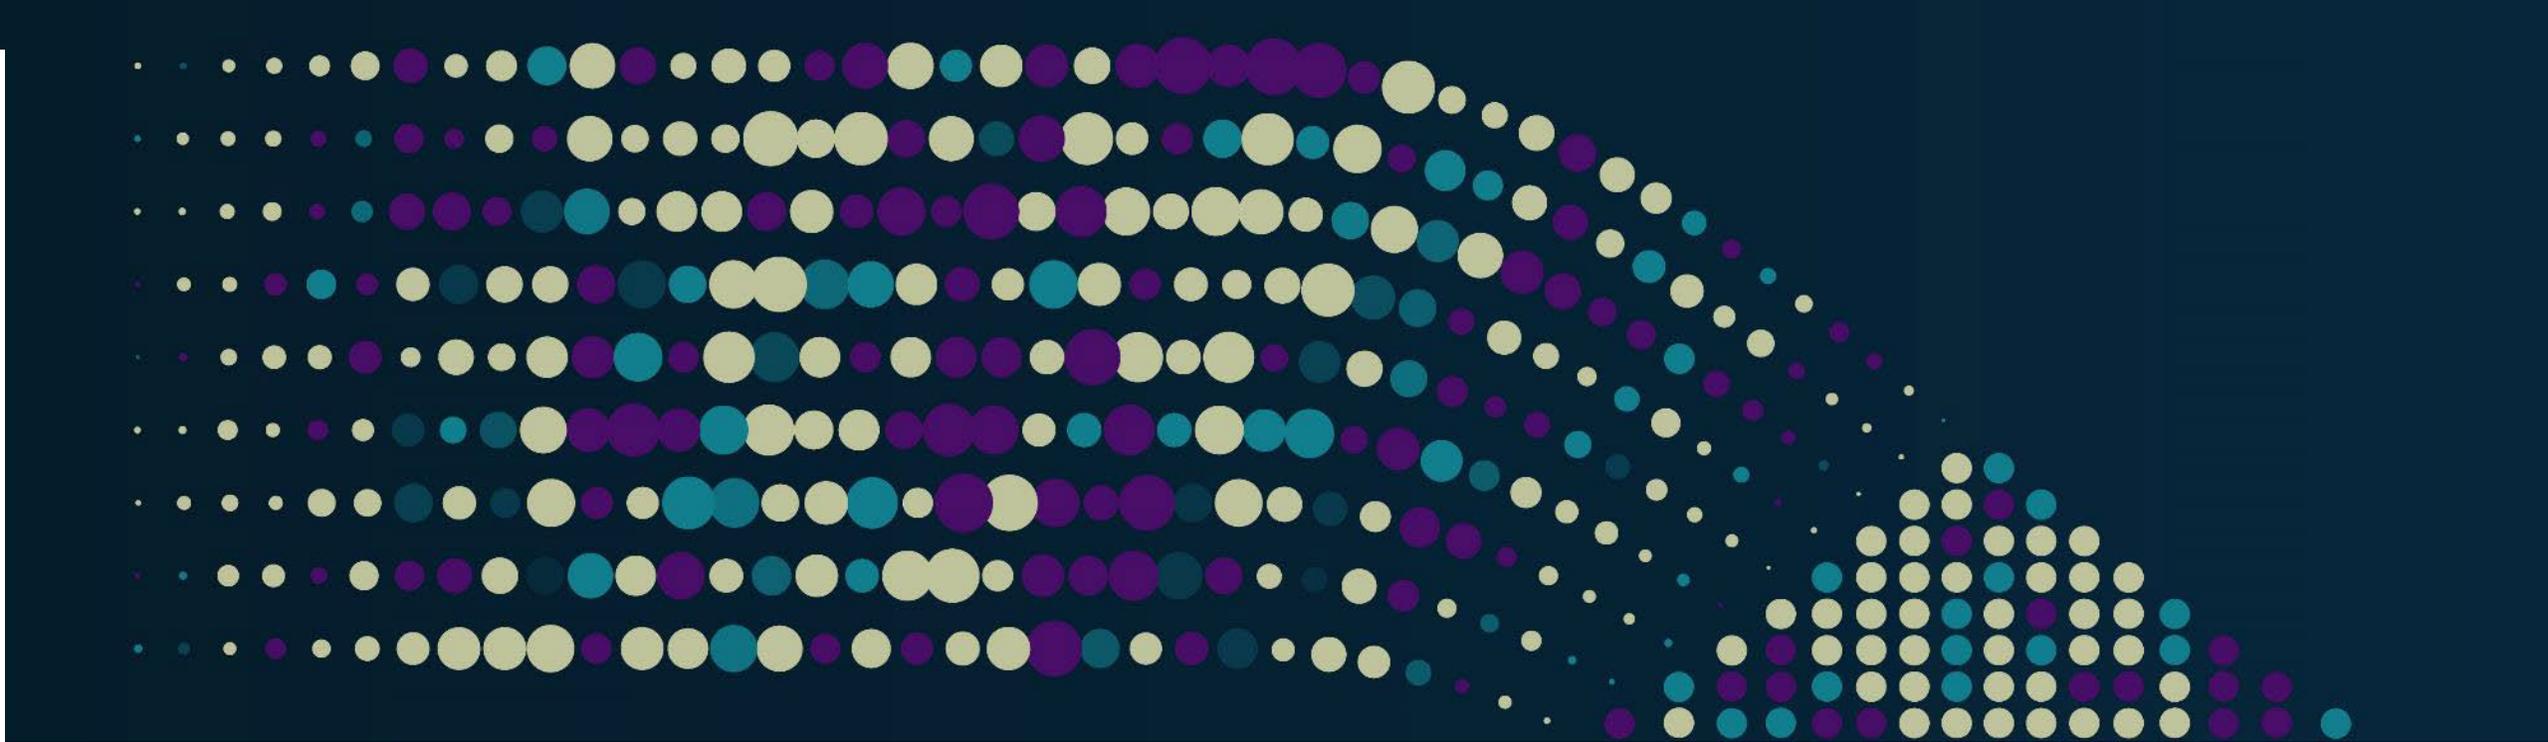

- Implementation

- SDK
- Test cases

Architecture – SUT Control

- SUT Remote Control Protocol
- Abstract control operations to SUT
 - PowerShell
 - Shell
 - Interactive
 - Managed
- SUT Control Agent (Managed) runs on SUT
 - C#
 - Java
 - C
 - Python

Usage

Windows Protocol Test Suites

Usage – Direct execution

- dotnet test
- Cross platform
- PowerShell & Shell batch scripts
 - RunAllTestCases
 - RunTestCasesByFilter
- Supports filtering
 - FullyQualifiedName
 - Name
 - TestCategory

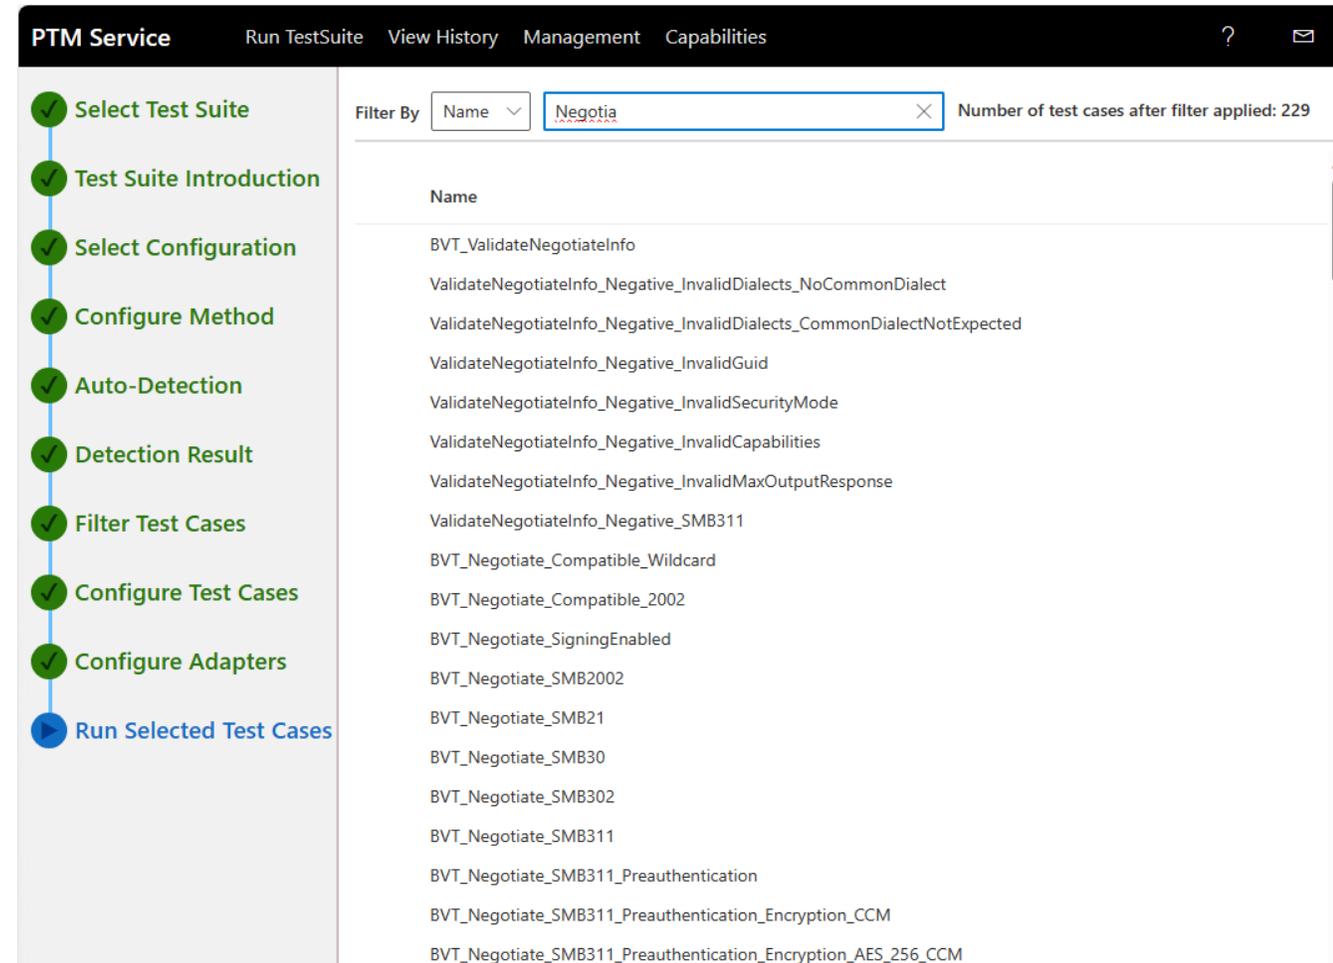

```
IOLab@FSA13-CLI:~$ cd FileServer-TestSuite-ServerEP/Batch/
IOLab@FSA13-CLI:~/FileServer-TestSuite-ServerEP/Batch$ ./RunTestCasesByFilter.sh "Name~Timestamp_Zero"

TIES.CipherCount MUST be set to 1
```

Usage – PTM Service

<https://github.com/microsoft/WindowsProtocolTestSuites/releases/tag/ptmservice@1.1.0>

- User Friendly
 - Auto detection
 - GUI
- Web service
- Cross platform
- Supports multiple Test Suite versions
- Create custom filter rules
- Export configuration

The screenshot displays the PTM Service web interface. The top navigation bar includes 'PTM Service', 'Run TestSuite', 'View History', 'Management', and 'Capabilities'. A sidebar on the left contains a vertical list of steps, each with a green checkmark, indicating completion: 'Select Test Suite', 'Test Suite Introduction', 'Select Configuration', 'Configure Method', 'Auto-Detection', 'Detection Result', 'Filter Test Cases', 'Configure Test Cases', and 'Configure Adapters'. The final step, 'Run Selected Test Cases', is highlighted with a blue play button icon. The main content area features a 'Filter By' dropdown set to 'Name' and a search input field containing 'Negotia'. Below the search field, a list of test case names is displayed, including 'BVT_ValidateNegotiateInfo', 'ValidateNegotiateInfo_Negative_InvalidDialects_NoCommonDialect', and 'BVT_Negotiate_SMB311_Preauthentication_Encryption_AES_256_CCM'. The interface also shows 'Number of test cases after filter applied: 229'.

Usage – PTM Cli

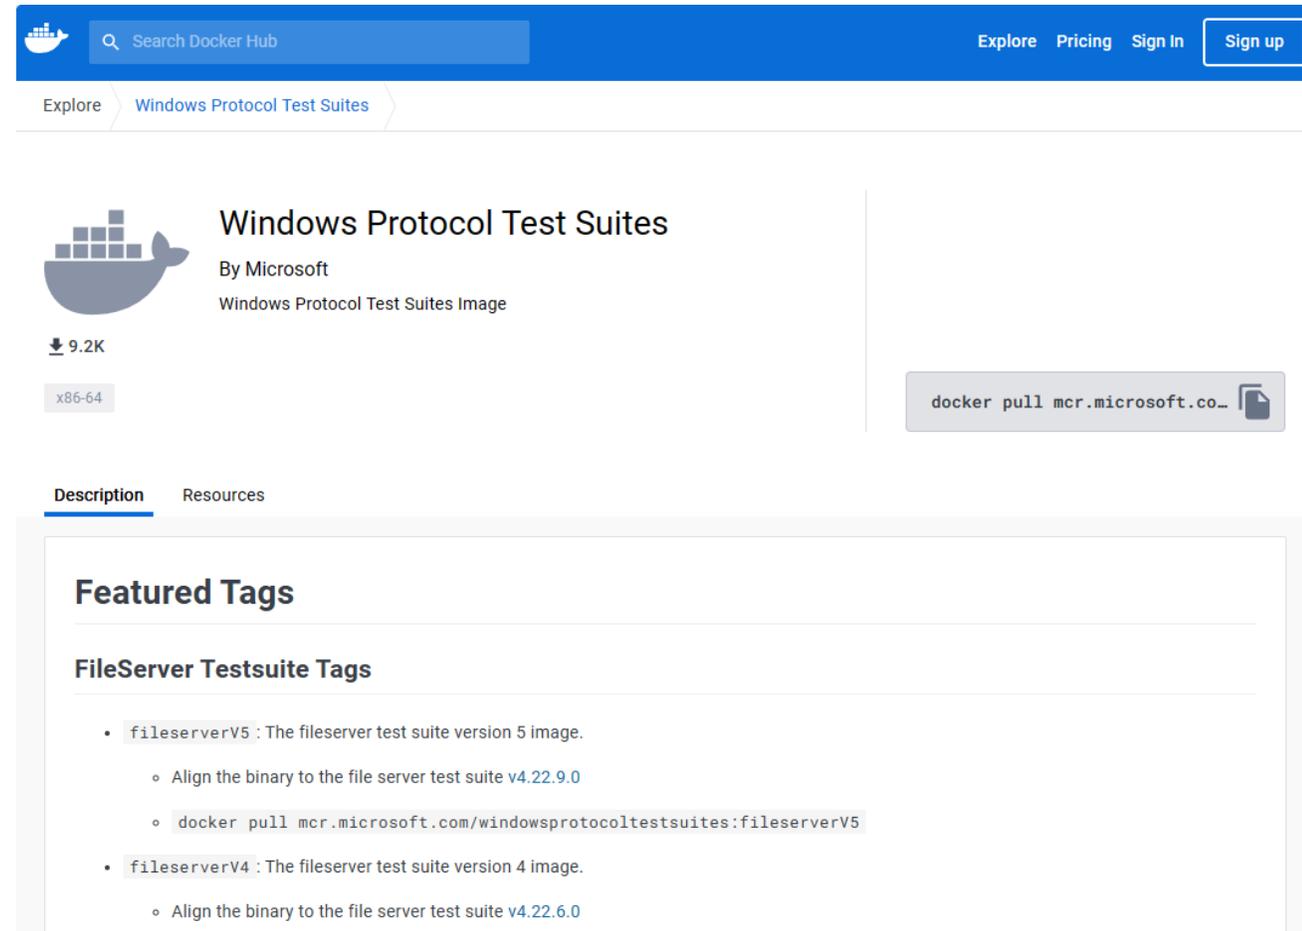

- Integrates with CI/CD
- Imports configuration
- Can be used with custom filter rules
- Automation friendly
- Cross platform

```
IOLab@FSA13-CLI:~/PTMcli$ dotnet PTMcli.dll -p ../Downloads/ProfileExported16943630990372.ptm -t ../FileServer-TestSuite-ServerEP

Usage – Docker Image

https://hub.docker.com/_/microsoft-windowsprotocoltestsuites

- Debian 11 base
- Supports PTM Service
- Supports Direct execution
- Supported Test Suites
 - File Server
 - RDP Server
 - RDP Client

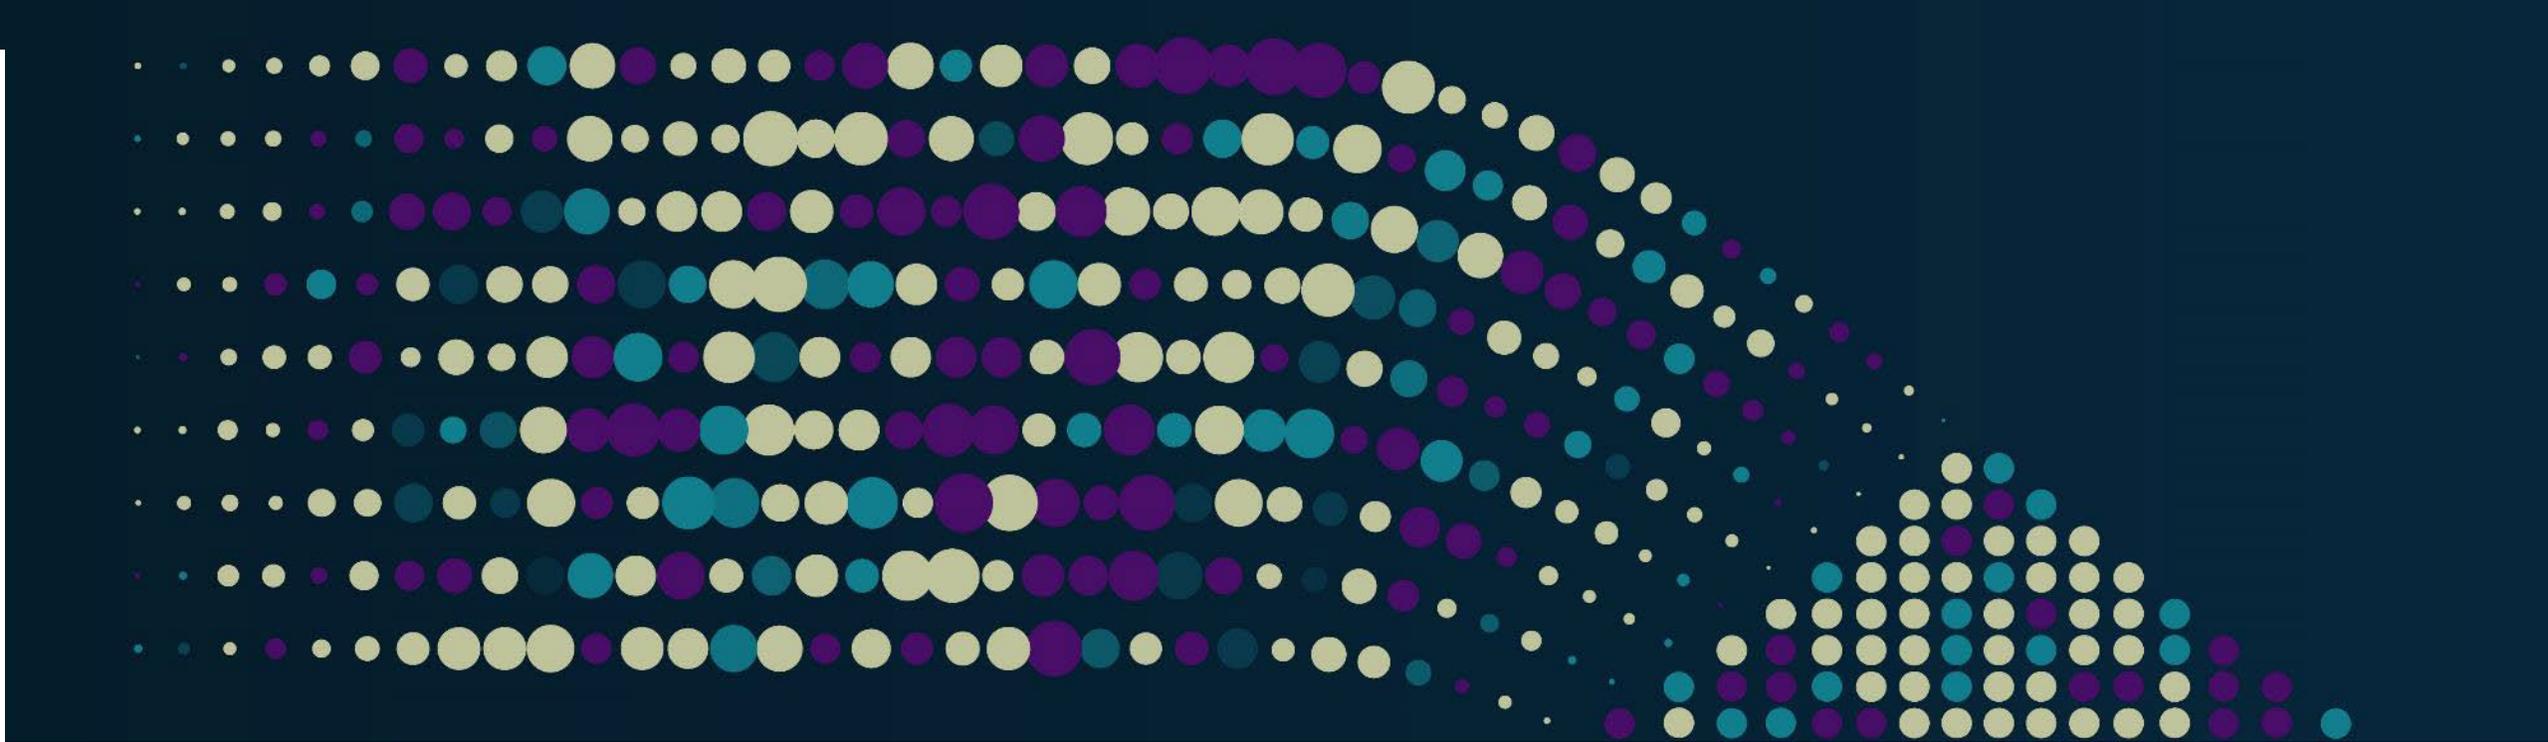

The screenshot shows the Docker Hub page for the 'Windows Protocol Test Suites' image. The page header includes a search bar and navigation links for 'Explore', 'Pricing', 'Sign In', and 'Sign up'. The main content area displays the image name, 'By Microsoft', and 'Windows Protocol Test Suites Image'. It also shows a download count of '9.2K' and an architecture tag of 'x86-64'. A 'docker pull mcr.microsoft.co...' button is visible. Below the image information, there are tabs for 'Description' and 'Resources'. The 'Description' tab is active, showing 'Featured Tags' and 'FileServer Testsuite Tags'. The 'FileServer Testsuite Tags' section lists two tags: 'fileserverV5' and 'fileserverV4', each with a description and a command to align the binary to the file server test suite.

```
docker pull mcr.microsoft.co...
```

Featured Tags

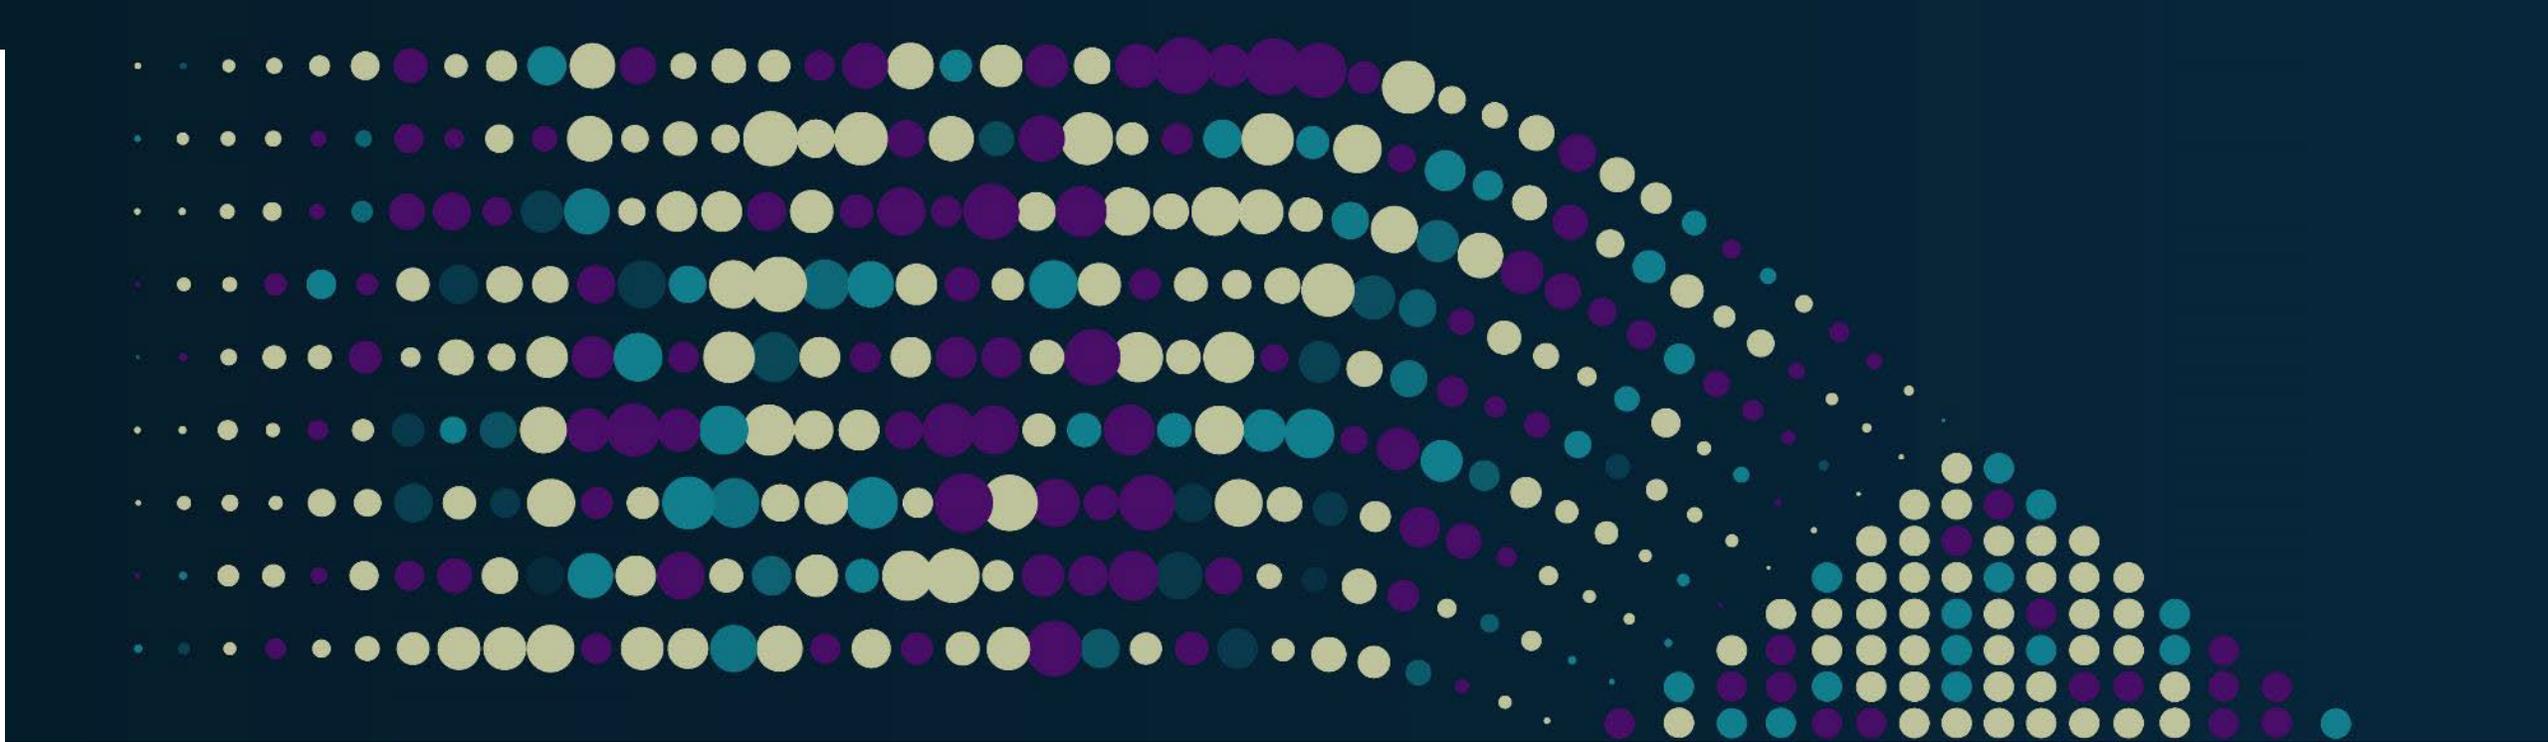

FileServer Testsuite Tags

- `fileserverV5` : The fileserver test suite version 5 image.
 - Align the binary to the file server test suite v4.22.9.0
 - `docker pull mcr.microsoft.com/windowsprotocoltestsuites:fileserverV5`
- `fileserverV4` : The fileserver test suite version 4 image.
 - Align the binary to the file server test suite v4.22.6.0
