

## Join the SNIA Cloud Storage Technologies Initiative

The SNIA Cloud Storage Technologies Initiative (CSTI) is committed to the adoption, growth and standardization of storage in cloud infrastructures, including its data services, orchestration and management, and the promotion of portability of data in multi-cloud environments.

### Member activities are designed to:

- Educate vendor and user communities on cloud storage, data services and orchestration
- Support and promote cloud business models and architectures such as OpenStack, Software Defined Storage (SDS), Kubernetes, and object storage
- Understand requirements (such as scale-out) from Hyperscalers and incorporate them into updated standards and programs
- Support and promote storage technologies for cloud infrastructure providers

### We undertake:

- Marketing, outreach and education via webcasts, white papers, published articles and blogs
- Support and advocate for the SNIA Cloud Storage TWG (Technical Work Group), the ISO CDMI standard, and promote SMI and SNIA Swordfish™ storage management standards
- Participate and run interoperability Plugfests and Open Source initiatives
- Collaborate with other industry associations

### Current Cloud Storage Initiative Member Companies (As of June 2018)
