March 19, 2009

IBM, in support of SNIA intellectual property policies, supports a full disclosure policy for published patent applications and issued patents with Essential Claims when developing SNIA specifications.

IBM's intellectual property disclosure is based upon the working knowledge of those individuals actively involved with the development of the DDF specification ver. 2.0 rev. 19 and does not represent the results of an IBM patent portfolio search.

IBM hereby identifies US5,258,994 “Method and Means for Distributed Sparing in DASD Arrays,” as a patent which along with its foreign counterparts may contain Essential Claims necessary to implement the DDF specification ver. 2.0 rev. 19, as currently defined and understood.

IBM will honor applicable license obligations as defined by the SNIA IP Policy with respect to Essential Claims, upon written request, if the DDF specification ver. 2.0 rev. 19 is designated as SNIA Architecture. This includes granting worldwide nonexclusive licenses, under reasonable, and non-discriminatory terms, for use of Essential Claims, in accordance with IBM's then current and usual licensing terms, for compliant implementations of the DDF SNIA Architecture specification.

A party wishing to request a license should contact:

IBM Director of Licensing
IBM Corporation
North Castle Drive, Armonk, N.Y., 10504

or should send a facsimile to:

IBM Director of Licensing
IBM Corporation
(914)-765-4420

Sincerely

Marcia Courtemanche
Program Director
Intellectual Property Standards and Licensing
