

Version: 1.2.4

Abstract: The Swordfish Scalable Storage Management API defines a RESTful interface and a standardized data model to provide a scalable, customer-centric interface for managing storage and related data services.

Working Draft

Publication of this Working Draft for review and comment has been approved by the Scalable Storage Management Technical Work Group. This draft represents a 'best effort' attempt by the Scalable Storage Management Technical Work Group to reach preliminary consensus, and it may be updated, replaced, or made obsolete at any time. This document should not be used as reference material or cited as other than a 'work in progress.' Suggestions for revision should be directed to http://www.snia.org/feedback.

Last Updated: 12 April 2022

DISCLAIMER

The information contained in this publication is subject to change without notice. The SNIA makes no warranty of any kind with regard to this publication, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The SNIA shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use.

Suggestions for revisions should be directed to http://www.snia.org/feedback/.

Current Revision

SNIA is actively engaged in expanding and refining the Swordfish documentation. The most current revision can be found on the SNIA web site at https://www.snia.org/tech_activities/standards/curr_standards/swordfish.

Contact SNIA

Current SNIA practice is to make updates and other information available through their web site at http://www.snia.org.

FEEDBACK AND INTERPRETATIONS

Requests for interpretation, suggestions for improvement and addenda, or defect reports are welcome. They should be sent via the SNIA Feedback Portal at

http://www.snia.org/feedback/ or by mail to the Storage Networking Industry Association, 4360 ArrowsWest Drive, Colorado Springs, Colorado 80907, U.S.A.

INTENDED AUDIENCE

This document is intended for use by individuals and companies engaged in storage management.

VERSIONING POLICY

This document is versioned material. Versioned material shall have a three-level revision identifier, comprised of a version number 'v', a release number 'r' and an errata number 'e'. Future publications of this document are subject to specific constraints on the scope of change that is permissible from one revision to the next and the degree of interoperability and backward compatibility that should be assumed between products designed to this standard. This versioning policy applies to all SNIA Swordfish versioned materials.

Version Number: Versioned material having version number 'v' shall be backwards compatible with all of revisions of that material that have the same version number 'v'. There is no assurance of interoperability or backward compatibility between revisions of a versioned material with different version numbers.

Release Number: Versioned material with a version number 'v' and release number 'r' shall be backwards compatible with previous revisions of the material with the same version number, and a lower release number. A minor revision represents a technical change to existing content or an adjustment to the scope of the versioned material. Each minor revision causes the release number to be increased by one.

Errata Number: Versioned material having version number 'v', a release number 'r', and an errata number 'e' should be backwards compatible with previous revisions of the material with the same version number and release number ("errata versions"). An errata revision of versioned material is limited to minor corrections or clarifications of existing versioned material. An errata revision may be backwards incompatible, if the incompatibility is necessary for correct operation of implementations of the versioned material.

Revision History

The evolution of this document is summarized in Table 1.

Table 1: Revision history

Date	Rev	Notes
19 September 2016	1.0.0	Initial Release
12 October 2016	1.0.1	Errata release for general clean up and formatting consistency
1 November 2016	1.0.2	Errata release to change multiple collections types from collections (arrays) to ResourceCollections to conform to Redfish usage guidelines
		Change multiple collections' types from collections (arrays) to ResourceCollections to conform to Redfish usage guidelines and move NavigationProperties from Links section.
24 January 2017	1.0.3	Errata release to move complex types and enum to versioned namespace
		Schedule schema: add property
		json schema fix (Swordfish to swordfish)
		Specification enhancements, multiple areas
		User's guide: multiple new use cases and new document section
25 April 2017	1.0.4	Errata release with minor updates to schema move FileShare collection, integrate DMTF and SNIA versions of Volume, fix incorrect property references and update descriptions Update mockups. User's guide: Update cross-references.
3 October 2017	1.0.5	Errata release to include schema simplifications and other lessons from initial implementations, as well as general cleanup of specification.

Date	Rev	Notes
13 February 2018	1.0.6	Updated Storage Systems model – added notion of Integrated Service Configuration i addition to (and named) Hosted Service Configuration
		Added ComplexType common definition section
		Added/updated common Redfish property definitions
		Updates to conform to new SNIA templates
12 October 2018	1.0.7	Enhanced Spare Capacity Management Model; Deprecated Remaining Capacity
		Added OpenAPI support: schema reference and OpenAPI YAML files
		Added iSCSI properties for CHAP
		Event usage enhancements and guidance
		Volume schema updates – RAID Type enum (deprecating VolumeType usage), add ReplicaTargets
		Schema updates: Annotations enhancemen Capabilities designations, owning entities, Redfish.Required usage
		Clarified and updated ClassOfService IsDefault property usage
		Updated Capabilities location in hierarchy
		Fix cardinality issue of StorageReplicaInfo usage in StorageGroups and Volume
		Consolidate Client and Server Endpoint Groups into single Endpoint Group entity (deprecate usage of separate Client Endpoin Group and Server Endpoint Group)
		Add MappedVolume construct to StorageGroup – adds LUN info and other properties

Date	Rev	Notes
		Clarified and updated ClassOfService IsDefault property usage
		Updated Capabilities location in hierarchy
		Fix cardinality issue of StorageReplicaInfo usage in StorageGroups and Volume
		Consolidate Client and Server Endpoint Groups into single Endpoint Group entity (deprecate usage of separate Client Endpoin Group and Server Endpoint Group)
		Add MappedVolume construct to StorageGroup – adds LUN info and other properties
8 November 2018	1.0.7a	Restored RAIDType property that was missin from 1.0.7
		Minor correction to schema versioning
22 August 2019	1.1.0	Restructured to add features and profiles
		Add description of SupportedFeatures usage and requirements
		Add requirements for subsets of Add language to clarify support for use with and without the class of service (now an optiona feature)
		Added descriptions of support for seamles extension of Redfish Storage model to Swordfish
		Add updated model diagrams to reflect new model permutations
		Added descriptions of new constructs (e.g., Consistency Groups)
		Cleaned up references to Redfish Specification based on latest version
		Add Status Codes clarification and constraint section

.0 .0a .0b	Released as Technical Position Released as Corrected Technical Position Formatting fixes – word wrap in pdf doc format to fix truncated lines Consistent object labeling in images (replace drive with disk) Editorial and grammar changes and cleanu to status code guidance section
	Formatting fixes – word wrap in pdf doc format to fix truncated lines Consistent object labeling in images (replace drive with disk) Editorial and grammar changes and cleanu

٥h	
.00	Released as Corrected Technical Position
	TLS requirements now based on both ISO an SNIA standards
	Redfish references now based on both ISO and SNIA standards
	Bibliography added
.0	Note: This release is done in conjunction with the DMTF's Redfish Forum Work-in-Progress June 2020 release of DSP-IS0014 (v0.95), which contains multiple schema to support this work. Both are released as Working Draf / work-in-progress for public review, and pla simultaneous releases in early fall 2020 to support full technical specification level capability and availability.
	Functionality availability in Swordfish includes:
	• Enhancements to Volume, StoragePools
	New schema: NVMeDomain
	Other supporting documentation released i conjunction with this specification and schema bundle:
	 Multiple mockups reflecting multiple implementation permutation options (available on swordfishmockups.com)
	.0

Date	Rev	Notes
		• Model overview documentation (NVMe to RF/SF Model Mapping Working Draft, dated May 2020)
18 August 2020	1.2.1	Note: This release is done in conjunction with the DMTF's Redfish Forum 2020.3 Release of the Redfish Specification, schema bundle and other supporting materials. Functionality availability in Swordfish
		includes:
		 NVMe Mapping Support, Enhancements to Volume, StoragePools
		Additional Enhancements in the Specificatior and schema:
		 Added InitializeMethod property to Volume.
		Made DedicateSpareDrives ReadWrite-able
		 Added enhanced Volume Access Capabilities and usage in StorageGroup.
		 Fix multiple URI issues across various schema.
		Updated formatting of tables to support automatic table numbering and ISO compatible table representation.
29 September 2020	1.2.1a	Added bibliography and updated TLS references
20 October 2020	1.2.1c	Updated with additional Redfish.URI annotations.
31 October 2020	1.2.1c	Released as SNIA Standard
2 March 2021	1.2.2	Added sections to document use of complex types.
		Updated common properties sections.
		Schema changes:

Date	Rev	Notes
		Add actions to Add and Remove drives directly from StoragePool.
		Split NVMeFirmwareImage and NVMeDomains schemas.
		Deprecate use of NetworkPort; replace with Port.
		Update Redfish.URI references.
		Corrected \$ref references in JSON schema files.
		Fix incorrect references in deprecated JSON files.
30 August 2021	1.2.3	Adds updates / corrections to Redfish.URI annotations
		Add IsBootCapable to Volume
		Add SupportedPoolTypes to StoragePool
5 December 2021	1.2.3	Release as SNIA Standard
12 April 2022	1.2.4	Release as Working Draft. Schema changes:
		 FeaturesRegistry: Errata fix – make Features property a collection.
		 IOStatistics: clarify intent regarding reset / wrap.
		• StoragePool: errata fixes for Actions.
		• Volume: errata fixes for Actions. Add:
		LBAFormatsSupported property to
		NVMeNamespaceProperties.

About SNIA

The Storage Networking Industry Association (SNIA) is a non-profit organization made up of member companies spanning information technology. A globally recognized and trusted authority, SNIA's mission is to lead the storage industry in developing and promoting vendor-neutral architectures, standards and educational services that facilitate the efficient management, movement and security of information.

1 Abstract

The Swordfish Scalable Storage Management API ("Swordfish") defines a RESTful interface and a standardized data model to provide a scalable, customer-centric interface for managing storage and related data services. It extends the Redfish Scalable Platforms Management API Specification (DSP0266) from the DMTF.

2 Scope

2.1 Document Goals

Swordfish extends the Redfish Scalable Platforms Management API Specification to define a comprehensive, RESTful API for storage management that addresses block storage, file systems, object storage, and storage network infrastructure. It is centered around common operational and business concerns of storage management, including:

- Configuration and provisioning
- Monitoring
- Event and log management
- Performance assessment
- Diagnostics
- Fault detection and remediation
- Security
- Accounting and resource consumption

Swordfish's storage model is built around well-defined classes of service, which provide a means to map high-level business goals and objectives to specific, storagebased actions and requirements, in a clear and consistent way that can be applied uniformly across a broad spectrum of storage configurations and storage types (e.g., block storage, file systems, object stores). Common storage management functionality covered by class of service includes snapshots, replication, mapping and masking, and provisioning.

The Redfish specification provides the protocols and a core set of data models and behaviors for the management of systems. It defines the elements and behaviors that are mandatory for all Redfish implementations. Additionally it defines additional elements and behaviors that can be chosen by system vendors or manufacturers. The specifications also defines points at which OEM (system vendor) extensions can be provided by a given implementation. The specifications specifies normative requirements for Redfish Services and associated materials, such as Redfish Schema files. The Redfish specifications does not set requirements for Redfish clients, but will indicate what a Redfish client should do in order to access and utilize a Redfish Service successfully and effectively.

The Swordfish specification defines additional data models and behaviors for the management of storage systems and storage infrastructure. A Swordfish implementation shall conform to all requirements specified in the Redfish specifications. Swordfish is suitable for a wide range of storage, from small-scale object drives, integrated RAID cards or RBODs providing storage services, to external disk arrays or file servers, to infrastructure providing storage services for converged, hyperscale and large scale cloud environments.

This document defines the Swordfish Scalable Storage Management API.

2.2 Audience Assumptions

As Swordfish is designed as an extension of the Redfish specification, this document is written with the presumption that the reader has a detailed understanding of the Redfish specification. This document cannot be fully understood without that context.

3 Normative References

3.1 Overview

The documents referenced in Table 3 are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3.2 Approved references

The approved references that contribute to this document are summarized in Table 3.

None defined in this document.

4 Terms and Definitions

4.1 Overview

In this document, some terms have a specific meaning beyond the normal English meaning. Those terms are defined in this clause. New terms, frequently used Redfish terms.

4.2 Swordfish-specific Terms

4.2.1 Definitions

The terms listed in Table 5 are used in this document.

Table 5: Swordfish terms

Term	Definition
Entity	An instance of a schema element.
Model	A set of entities and the relationships between them that define the semantics, behavior and state of that set.
OData service	A REST-based service that allows resources, identified using Uniform Resource Locators (URLs) and defined in a model, to be published and edited by Web clients using simple HTTP messages.
Resource	A central element in a model, which represents a physical construct or a logical service, and is further defined by other model entities.
Schema	A formal language representation of a model that conforms to a metamodel.
Service Document	A particular resource that is directly accessed via an OData service entry point. This resource serves as a starting point for locating and accessing the other resources and associated metadata that together make up an instance of a Swordfish service.

Term	Definition
Swordfish service	An extension to the Redfish Service that conforms to the Swordfish specification, and provides REST-ful storage management functionality.

4.2.2 Symbols and abbreviated terms

None in this document.

4.3 Reference to Redfish terms

Many terms in this document were originally defined in the Redfish Specification. Some of the more common terms and definitions are reproduced in Table 6, as an aid to the reader.

Table 6: Redfish terms

Term	Definition (as of 16 August 2019)
OData	The Open Data Protocol, as defined in OData-Protocol.
OData Service Document	Resource that provides information about the service root for generic OData clients.
Redfish Schema	Defines Redfish Resources according to OData schema representation. You can directly translate a Redfish Schema to a JSON Schema representation.
Redfish service	Implementation of the protocols, resources, and functions that deliver the interface that this specification defines and its associated behaviors for one or more managed systems.
Request	A message from a client to a service.
Service Root	Resource that serves as the starting point for locating and accessing the other resources and associated metadata that together make up an instance of a Redfish Service.

4.4 Keywords (normative language terms)

This document conforms to ISO/IEC Directives, Part 2 for keyword usage. The most common terms and their intended meanings are summarized Table 7.

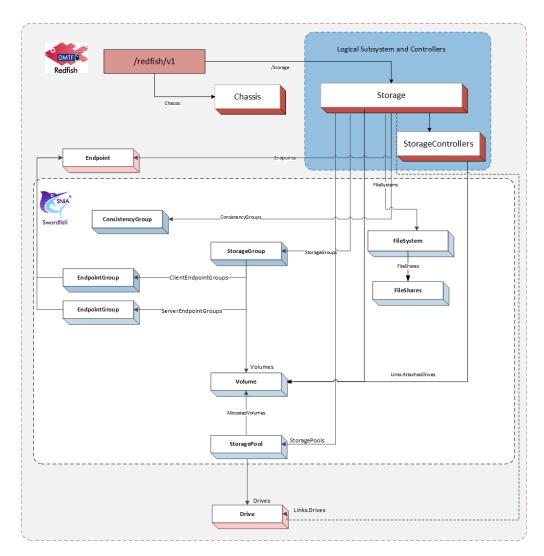

Term(s)	Meaning
shall / shall not	Used to identify objectively verifiable criteria to be fulfilled and from which no deviation is permitted if compliance with the document is to be claimed
should / should not	Used to identify a suggested possible choice or course of action deemed to be particularly suitable without necessarily mentioning or excluding others
may / need not	Used to convey consent or liberty (or opportunity) to do something
can / cannot	Expected or conceivable material, physical or causal outcome
must	Identifies a constraint or obligation on the user of the document, typically due to one or more legal requirements or laws of nature, that is not stated as a provision of the standard <i>NB</i> : "must" is not an alternative for "shall", and should only be used for constraints that arise from outside this standard

Table 7: Normative language terms

5 Swordfish Overview

5.1 Introduction

The Swordfish Scalable Storage Management API ("Swordfish") defines a RESTful interface and a standardized data model to provide a scalable, customer-centric interface for managing storage and related data services. It extends the Redfish Scalable Platforms Management API Specification (DSP0266) from the DMTF.

5.2 Relation to Redfish

Figure 1: Model Overview

The Swordfish service interface extends the Redfish service interface. As such, a Swordfish service is a Redfish service and includes all required elements of the Redfish model, as illustrated by Figure 1.

The storage systems shall be instantiated in one of two places in the hierarchy: directly in the Storage resource collection, or - attached to a ComputerSystems, with an associated reference link in the StorageSystems resource collection at the Service Root. In this case, there shall also be a reference link to the Storage resource in the Storage resource collection at the Service Root.

As a result, a Swordfish client is always to locate the storage systems managed by the Swordfish service in the ServiceRoot via the Storage resource collection; this may be a combination of references to instances and instantiated instances.

The physical infrastructure is modeled using Redfish Chassis.

As modeling for storage systems may cover both logical and physical constructs, Swordfish management clients that are focused on logical storage management use cases may choose to manage functionality entirely by way of logical resources.

Each Swordfish service is accessed via well known URLs on the system supporting the Swordfish Service. Since Swordfish is an extension of Redfish, these URLs are the same as for accessing the Redfish defined aspects of the service.

5.3 Storage System Models

Swordfish has been designed to support a broad range of configurations, requirements, size and complexity, as well as logical and physical architectures. As a result, there are two primary methods of modelling the storage system for a Swordfish implementation:

1. Swordfish Standalone Configuration

The standalone configuration instantiates the logical storage system instance representation in the Storage resource collection directly off the Service Root. The logical storage system is modeled using the Redfish Storage and StorageController resources, as shown in Figure 2. Managed resources are connected to the Storage resource, including Volumes and StoragePools.

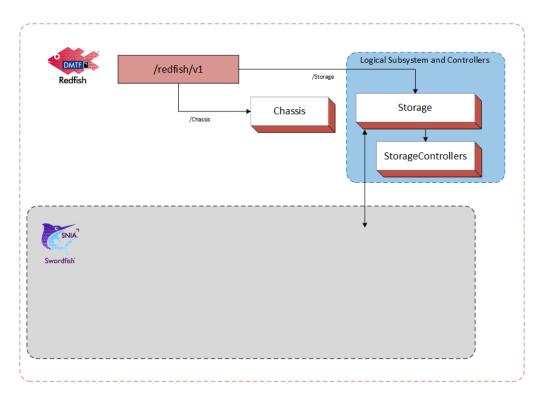

Figure 2: Logical Subsystem in Swordfish Standalone Configuration

This configuration works well for standalone devices or storage systems. An example of a Storage System for an standalone configuration is shown in Figure 3.

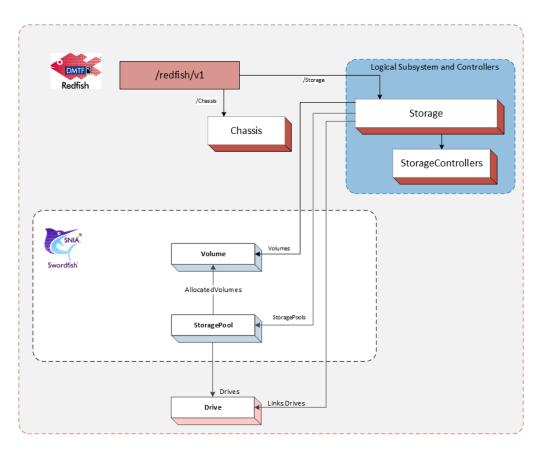

Figure 3: Swordfish Standalone Configuration Example

2. Swordfish Integrated Configuration

The integrated configuration attaches to the Storage collection within the same ComputerSystem model instantiation as the server where the physical element resides.

The logical storage system is modeled using the Redfish Storage and StorageController resources. The Storage resource is located in the Redfish hierarchy contained by ComputerSystems, typically running as ApplicationServers. The physical infrastructure is modeled using Redfish Chassis. Managed resources are connected to the Storage resource, including Volumes and StoragePools.

The integrated configuration is illustrated in Figure 4.

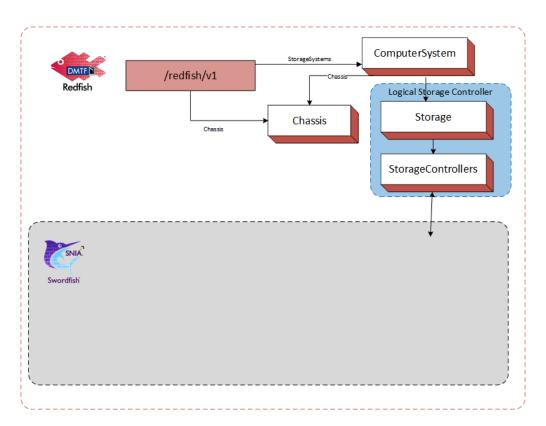

Figure 4: Logical Subsystem in Swordfish Integrated Configuration

This configuration works well when the storage system can be modeled by simply instantiating a new Storage object within an existing computer system. An example of a Storage System for an integrated configuration is shown in Figure ref{Figure_5}.

Swordfish Scalable Storage Management API Specification

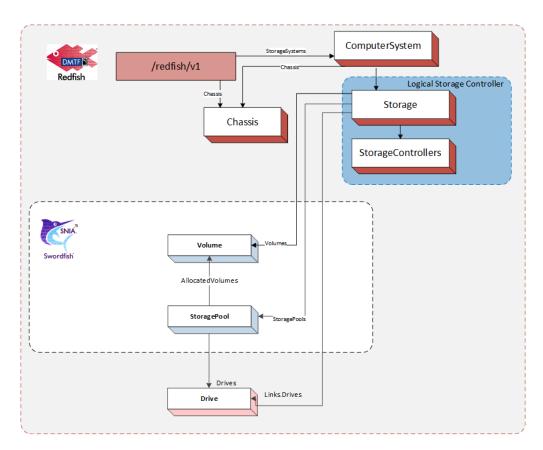

Figure 5: Swordfish Integrated Configuration Example

5.4 The ServiceRoot and ServiceContainer entities

5.4.1 Overview

A **GET** of /redfish/v1 will return the ServiceRoot entity. A **GET** of /redfish/v1/odata will return the ServiceContainer instances that represents the OData service document. Each of these instances provides links to the remainder of the system.

The following are the elements utilized for Swordfish management.

- Storage: A reference to the Storage resource collection. - Systems: A reference to a Systems resource collection; - Chassis: A reference to a Chassis resource collection; -StorageSystems: A reference to a StorageSystems resource collection.

5.4.2 The Storage resource collection

A resource collection that references a set of Storage resources that each represents a storage subsystem. This collection can contain either resources or references to instances of Storage resources. Each Storage resource represents an instance of a storage subsystem. For Swordfish subsystems, refer to the details in the Swordfish model overview for details on required elements.

5.4.3 The Systems resource collection

A resource collection that references a set of ComputerSystem resources that each represents a general purpose application server. Each ComputerSystem resource will have an entry with the value of "ApplicationServer" in its HostingRoles property. A particular ComputerSystem resource can be in both the StorageSystems collection and the Systems collection.

5.4.4 The Chassis resource collection

A resource collection that references a set of Chassis resources. Each Chassis resource represents physical containers, (i.e. sheet-metal confined spaces and logical zones like racks, enclosures, chassis and all other containers). Subsystems (like sensors), which operate outside of a system's data plane (meaning the resources are not accessible to software running on the system) are linked either directly or indirectly through this resource.

5.4.5 The StorageSystems resource collection

A reference to a ComputerSystemCollection with members of type ComputerSystem that support storage services. These ComputerSystem resources represent systems that support Swordfish storage management services. They will have an entry with the value of "StorageServer" in their HostingRoles property. This collection, then, is a resource collection that references a set of ComputerSystem resources that each represents a storage server. Each ComputerSystem resource will have an entry with the value of "StorageServer" in its HostingRoles property. A particular ComputerSystem resource can be a member of both the StorageSystems resource collection and the Systems resource collection.

5.5 Swordfish model overview

5.5.1 The Storage resource

The storage system exposes logical storage, associated resources and related functionality. Storage resources can be found in the service root or service container via the Storage resource collection, and are attached to the Storage object within the Storage resource collection.

The storage system typically provides the ability to create, manage and present block, file or object store from a set of back-end media, presented to one or more hosts. Storage controllers can work in coordinated sets of one or more to present value-add capabilities, such as failover, data protection, and data path management within the storage system, that are represented through the various resources within the storage system.

The following are the principal properties of Storage that point to resources managed or defined by the storage system:

- Controllers: A reference to a resource collection that collects StorageController resources.
- Drives: A reference to a collection that collects Drive resources used for storage.
- Enclosures: A reference to a resource collection that collects Chassis resources that contain storage related resources.
- Endpoints: A reference to a resource collection that collects Endpoint resources used to access storage.
- EndpointGroups: A reference to a resource collection that collects Endpoint-Groups resources.
- FileSystems: A reference to a resource collection that collects FileSystem resources.
- StorageGroups: A reference to a resource collection that collects StorageGroup resources.
- ConsistencyGroups: A reference to a resource collection that collects ConsistencyGroup resources.
- StoragePools: A reference to a resource collection that collects StorageGroup resources.
- Volumes: A reference to a resource collection that collects Volume resources.

5.5.1.1 The StorageController resource The storage controller presents the foundational resources used by the storage system. It generally contains connectivity

resources between the system and connected consumers.

5.5.1.2 The Endpoint resource Endpoints represent one end of a protocol specific connection that supports sending or receiving messages according to a particular protocol.

5.5.1.3 The Endpoint Collection resource The Endpoint Group is resource collection that references a set of Endpoint resources.

5.5.1.4 The ConsistencyGroup resource ConsistencyGroups represent a set of volumes that are managed consistently and collectively as a group, to allow system and application level activities to be performed on a set of data that spans volumes. This activities include device-level replication activities as well as system level functions, such as reset.

When ConsistencyGroups are implemented, they are attached to a Storage resource and its internal Volumes collection is constructed from a subset of the Volumes collection of the Storage resource.

5.5.1.5 The ConsistencyGroup Collection resource The ConsistencyGroupCollection is a resource collection that references a set of ConsistencyGroup resources.

5.5.1.6 The StorageGroup resource StorageGroups represent a set of volumes that are managed as a group in order to facilitate mapping and masking, in which the volumes of a storage group are collectively exposed or hidden to a set of clients.

The set of volumes is specified by the Mapped Volumes attribute. MappedVolumes is a resource collection of the Mapped Volume construct (a tuple of a pointer to a volume and a corresponding Logical Unit Number for that volume).

The set of client endpoints to which the volumes can be exposed is specified by the ClientEndpointGroupsattribute. The ClientEndpointGroup resource specifies a collection of EndpointGroup resources.

The set of server endpoints to which the volumes can be exposed is specified by the ServerEndpointGroupsattribute. The ServerEndpointGroup resource specifies a collection of EndpointGroup resources.

5.5.1.7 The StoragePool resource The StoragePool resource represents unassigned storage capacity that can be used to produce storage volumes or other storage pools.

The following are the principal properties of StoragePool that are used to create or identify resources provisioned or supported by the storage pool:

- AllocatedVolumes: A reference to a resource collection that collects Volume resources that have been provisioned from the storage pool.
- AllocatedPools: A reference to a resource collection that collects StoragePool resources that have been provisioned from the storage pool.
- CapacitySources: A reference to a resource collection that provides pointers to the capacity sources that are used to provide the underlying capacity for this storage pool.
- RAIDTypes[]: The set of RAIDTypes supported by this StoragePool. This may be set upon StoragePool creation, or may be a reflection of the implementation's ability to support different RAID types. Consumers may use this property to determine what RAID types are available from specific StoragePool instances for additional Volume creation requests, or what RAIDTypes have been applied to Volumes already allocated.

5.5.1.8 The Volume resource Volume resource represents a block-addressable container of storage, sometimes referred to as a "Logical Unit", "LU", "LUN", or "StorageVolume" in the storage industry.

5.5.1.9 The FileSystem resource This FileSystem resource represents a file system. Each FileSystem may contain a collection of FileShares that can be presented to hosts.

6 Features and Profiles

6.1 Overview

Features are high-level descriptions of functionality which an implementation uses to advertise what functionality it currently supports, and for some features, is capable of supporting.

The detailed definitions required to describe to implementers how to implement a feature are written in profile definition files. A feature is generally represented in one (but may be more) profile definition file, or profile.

Profiles are detailed descriptions that describe down to the individual property level what functionality is required in order to advertise features. Different profile definitions can exist for the same feature type but for various types of storage configurations: Swordfish.Block.Provisioning, Swordfish.File.Provisioning

The Swordfish Features Registry shall be used to advertise what standard and Oem Features an implementation supports.

6.2 Requirement for SupportedFeatures

SupportedFeatures entries in the Features registry represent the client's primary initial runtime view of the capabilities of a Swordfish implementation. Without properly formed entries in this registry, there is no visibility to an implementation's functionality.

Swordfish implementations shall implement the Features registry and advertise at least the SNIA.Swordfish.Discovery supported feature in order to be considered a Swordfish implementation.

Features define coarse-grained sets of functionality. In order to advertise a feature (using the SupportedFeature mechanism in the SupportedFeatures Registry), the implementation must support the complete set of functionality as defined in the corresponding profile.

The Swordfish Features Registry publishes the official list of supported SNIA Features, and provides a high-level description of their functionality. Many of those features are self-explanatory (e.g., local replication, remote replication), but there are some features where additional context is appropriate:

- Class of Service
- Energy Star for Storage

6.3 EnergyStar for Storage Feature

The EnergyStar for Storage Feature and profile has been created to formalize the requirements from the ENERGY STAR Data Center Storage Program Requirements on storage products. The profile indicates what properties Swordfish implementations need to support in order to properly instrument EnergyStar reporting capability. This functionality is intended to support EnergyStar data gathering requirements as part of the EnergyStar certification process.

6.4 Class of Service Feature

6.4.1 Overview

Swordfish supports a ClassOfService feature. The ClassOfService functionality supports systems that are capable of providing a greater level of management automation, where a higher-level set of goals is provided as direction rather than requiring parameterized inputs for all configuration actions.

The Class of Service feature uses a combination of device-defined capabilities to structure LinesOfService, which are sets of available functionality in a given system, that can then be grouped together to provide classes of service.

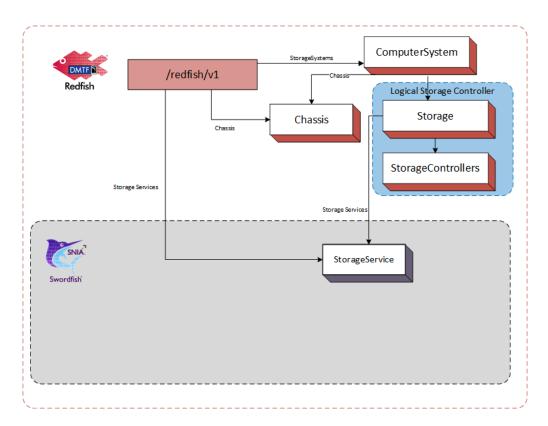

When Class of service functionality is implemented, the Swordfish functionality may be entirely exposed through the StorageService resource. Each Swordfish StorageService is located in the ServiceRoot (and ServiceContainer) via the StorageServices resource collection.

6.4.2 Class of Service Model

For Swordfish with a class of service interface, the following two models apply. Either model choice results in the same storage service, regardless of the storage system model.

1. Integrated Service Configuration

The storage systems managed by the Swordfish storage service are modeled using the Redfish Storage resource and StorageController resource collections. The Storage resource is located in the Redfish hierarchy contained by ComputerSystems, typically running as ApplicationServers. The physical infrastructure is modeled using Redfish Chassis, as shown in Figure 6.

This configuration works well when the storage service is hosted by a storage resource within a computer system. An example of a Storage Service for an integrated service configuration is shown in Figure 7.

Note: This diagram and the discussion of the configuration description have been simplified slightly to avoid confusion. A full implementation would likely include additional links to the logical storage controller resources.

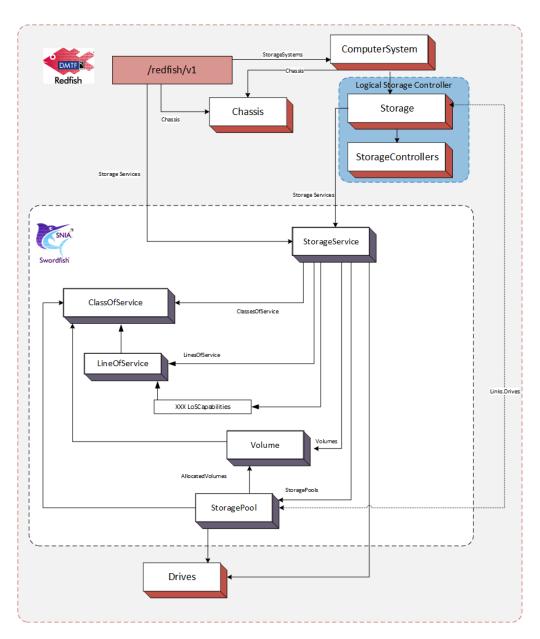

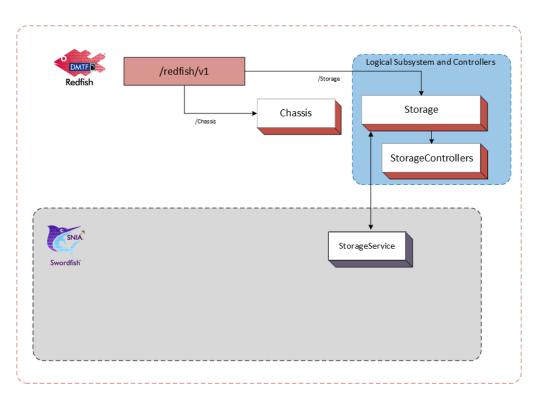

Figure 7: Integrated Service Configuration Example

2. Standalone Service Configuration

The storage systems managed by the Swordfish storage service are located in the ServiceRoot (and ServiceContainer) via the Storage resource collection. They model the logical storage system using Redfish Storage and 'StorageController' resources. The physical infrastructure is modeled using Redfish Chassis. This is shown in Figure 8.

This configuration works well when the standalone storage system directly hosts the storage service(s). An example of a Storage Service for a hosted service configuration is shown in Figure 9.

Note: This diagram and the discussion of the configuration description have been simplified slightly to avoid confusion. A full implementation would likely include additional links to the logical storage controller resources.

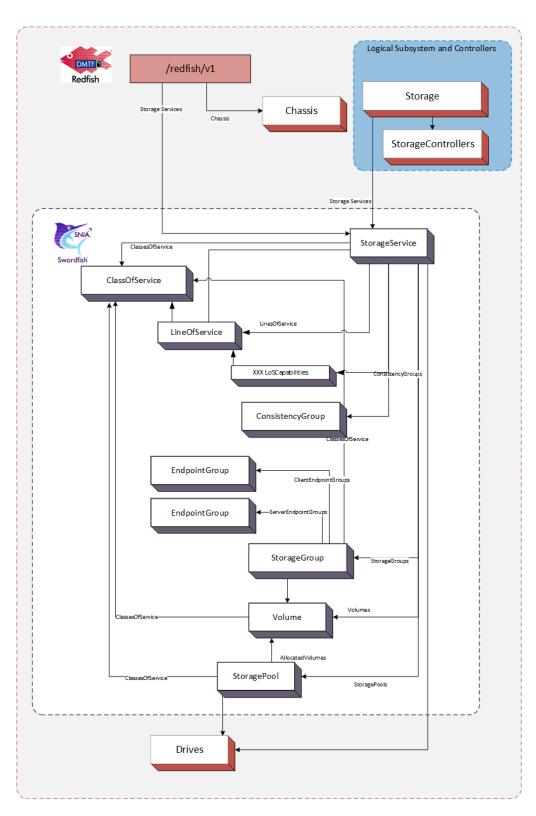

Figure 9: Standalone Service Configuration Example

6.4.3 ServiceRoot Additions

When the StorageService feature is implemented, the following is added to the ServiceRoot:

• StorageServices: A resource collection that references a set of StorageService resources. Each StorageService resource represents the resources and behaviors supported by that storage service.

6.4.4 The StorageService resource

6.4.4.1 Principal Properties The storage service is hosted on a storage system and exposes logical storage, associated resources and related functionality. Storage service resources can be found in the service root or service container via the StorageServices resource collection.

The following are the principal properties of StorageService that point to resources managed or defined by the storage service:

- ClassesOfService: A reference to a resource collection that specifies the supported ClassOfService resources.
- Drives: A reference to a resource collection that collects Drive resources used for storage.
- Enclosures: A reference to a resource collection that collects Chassis resources that contain storage related resources.
- Endpoints: A reference to a resource collection that collectsEndpoint resources used to access storage.
- FileSystems: A reference to a resource collection that collects FileSystem resources.
- EndpointGroups: A reference to a resource collection that collects Endpoint-Groups resources.
- StorageGroups: A reference to a resource collection that collects StorageGroup resources.
- StoragePools: A reference to a resource collection that collects StorageGroup resources.
- Volumes: A reference to a resource collection that collects Volume resources.
- HostingSystem: A reference to the ComputerSystem instance that hosts this StorageService.

6.4.4.2 Capabilities and Lines of ServiceRoot The following properties each define a set of attributes, which describe capabilities that the storage service may support:

- DataProtectionLoSCapabilities: Replicas that protects data from loss.
- DataSecurityLoSCapabilities: Data security service level requirements. The data security characteristics enable the storage system to be used in an environment where compliance with an externally-specified security standard or standards is required. Examples of such standards include FIPS-140, HIPAA and PCI.
- DataStorageLoSCapabilities: Provisioning and access characteristics for storage of the data.
- IOConnectivityLoSCapabilities: IO connectivity requirements for access to the data.
- IOPerformanceLoSCapabilities: IO performance requirements for access to the data.

In each of the above, not all combinations of attribute values defined within a capability are likely to be supported by the storage service.

Known, supported combinations of attribute values are used to construct entries in the LinesOfService array property. Not all attributes of a line of service entry need be specified (i.e. some may be Null). If an attribute has no value, the storage service may choose any supported values when provisioning for that entry. Otherwise, the line of service attribute values specifies the kind or level of service to be provided.

6.4.4.3 The ClassOfService resource A class of service represents a choice of utility or warranty offered to customers by a service. (ITIL uses the term service option. See the Normative References.)

Each ClassOfService resource is a uniquely named description of the characteristics of one choice of utility or warranty for a service. Each ClassOfService is a description of the kind and quality of service to provide and is not intended to describe how the service provides that service.

Each ClassOfService is defined by an aggregation of lines of service. Supported lines of service are listed in the corresponding capabilities attributes of the storage service, (see above).

Currently defined lines of service are:

• Data Protection: Describes the characteristics of a replica that protects data from loss.

- Data Security: Describe data security service level requirements. The data security characteristics enable the storage system to be used in an environment where compliance with an externally-specified security standard or standards is required. Examples of such standards include FIPS-140, HIPAA and PCI.
- Data Storage: Describes provisioning and access characteristics for storage of the data.
- IO Connectivity: Describes IO connectivity requirements for access to the data.
- IO Performance: Describes the IO performance requirements for access to the data under a particular workload.

Some advertised ClassOfService resources are created by the service implementation. These are generally not changeable and are intrinsic to the implementation.

A service may support creation or modification of ClassOfService resources. All must be consistent with the capabilities of the service.

6.4.4.4 The StoragePool resource When a Swordfish implementation advertises support for the Class of Service feature, the StoragePool resource now presents a new method to the client to allocate unassigned storage capacity. This is automated by the system as conformance to one or more classes of service. Requests to StoragePool shall automatically allocate capacity based on the constraints of the selected class of service and any other selected parameters, with priority given to the class of service constraints.

The following are the principal properties of StoragePool that are used to identify resources provisioned or supported by the storage pool related to Class of Storage:

- ClassesOfService: A reference to a resource collection that specifies the set ClassOfService resources that can be specified when provisioning resources from the storage pool.
- DefaultClassOfService: A reference to the default ClassOfService resources used for provisioning from the storage pool.

6.4.4.5 The Volume resource Volume resource represents a block-addressable container of storage, sometimes referred to as a "Logical Unit", "LU", "LUN", or "StorageVolume" in the storage industry. Volumes optionally adhere to a ClassOfService, which defines added functionality. Examples include:

- Access capabilities
- Capacity and capacity sources

- Consumption tracking (e.g., LowSpaceWarningThresholdPercents)
- Replication details
- StorageGroup Information

6.4.4.6 The FileSystem resource In a Swordfish implementation that advertises support for the Class of Service feature, File systems represent file-addressable capacity that are conformant to a ClassOfService.

7 Schema Considerations

7.1 Schema Introduction

7.1.1 Overview

A Swordfish implementation is a Redfish implementation, and as such it minimally includes support for some Redfish-defined schema, including ServiceRoot and ComputerSystem. Swordfish implementations include support for Swordfish-defined schema. The Swordfish model focuses primarily on the logical model of a storage system and does not require full representation of a physical instantiation. This is left to the implementer to complete from available Redfish schema models.

Swordfish schema is conformant with the rules used to define Redfish schema. Redfish schema is conformant with the Common Schema Definition Language, see CSDL. This section provides additional definition and context for the CSDL elements used to define Swordfish schema.

7.1.2 Swordfish Extension of the Redfish ServiceRoot

The Redfish ServiceRoot has properties that provide access to Swordfish resources.

The first is StorageSystems. This property references a collection of ComputerSystem resources that each support Swordfish functionality. Each such ComputerSystem shall have an entry in its HostingRoles property with the value of StorageServer.

For implementations that advertise support for the ClassOfService feature, the implementation shall instantiate a collection of StorageServicesat the ServiceRoot with at least one member. The collection provides the client an efficient means to search across all StorageService resources, regardless of which ComputerSystem is supporting the service.

7.2 Default values and NULLABLE attributes

The interaction of Nullable and DefaultValue needs to be clearly understood by both implementers and client developers. The possible combinations of are summarized in Table 8. The table contains:

- Nullable: True, if a given property may be NULL
- **DefaultValue**: True, if a default value is provided for a given property

- **Client**: True, if a client value is supplied for a given property in a query or response
- **Result**: The resultant value of the given property. One of:
 - C: The client-provided value
 - D: The default value
 - *Null*: Null
 - *I*: Implementation defined
 - Error: Error state

Table 8: Default and Nullable Interaction

Nullable	DefaultValue	Client	Value
т	Т	Т	С
Т	Т	F	D
Т	F	Т	С
Т	F	F	I or Null
F	Т	Т	С
F	Т	F	D
F	F	т	С
F	F	F	l or Error

7.3 Common schema annotations

Table 9 lists common annotation used in the definition of Swordfish, for details see OData Capabilities Vocabulary, OData Core Vocabulary, OData Measures Vocabulary, and Redfish Extensions.

Name	Applies to	Description
AllowableValues	Parameter	The set of allowable values for a
		parameter

Swordfish Scalable Storage Management API Specification

Name	Applies to	Description
AutoExpand	NavigationProperty	If true, return expand the target element
AutoExpandReferences	NavigationProperty	If true, return references to the target element
ConformanceLevel	EntityContainer	Specifies OData conformance level
Deprecated	All	Specifies that the element may be removed in future major revisions, but shall continue to be supported as specified in the current revision.
Description	All	A brief description of a model element
LongDescription	All	A normative description of a model element
Maximum	Parameter, Property	Maximum value that an integer property or parameter may have
Minimum	Parameter, Property	Minimum value that an integer property or parameter may have
Pattern	Parameter, Property	Specifies a pattern that the value shall match
Permissions	NavigationProperty, Property	Access permission for the property.
Required	NavigationProperty, Property	If true, property is required to be supported by the service. The default is optional. See <i>Required</i> <i>Properties</i>
RequiredOnCreate	NavigationProperty,	If true, property is required on
Unit	Property Property	creation. See <i>Required Properties</i> The unit of measure for the value.

7.4 Property implementation requirements

The client and the implementer should understand that, regardless of the schema declaration, an implementer may choose to not implement a property. If not implemented, a representation of the property will not be present in a reply. This should not be confused with a response that indicates that a property has been implemented, but has no value (i.e. *propertyName = null*).

There are several factors that could affect the implementation choice. Implementation requirements can be defined in many documents. At a minimum, a developer should review, in order: 1. the Redfish specification, 2. this document, and 3. associated profile specifications.

7.5 Schema repository

The primary online source for the Swordfish schema shall be co-located on the DMTF schema site with the Redfish schema: http://redfish.dmtf.org/schemas/swordfish Developers may also download the schema as part of the Swordfish bundle from snia.org (refer to snia.org/swordfish for pointers to the bundle locations).

Implementations should refer either to the versions available on the dmtf.org site or to locally provided instances of the schema.

7.6 Referencing other schemas

Swordfish directly references many Redfish schemas when functionality is already defined and can be leveraged. Other Redfish schema may be added by inference or directly to implementations. Examples are available in the Swordfish mockups.

8 Implementation requirements

8.1 Security

This document generally adheres to the security requirements defined in the Redfish Specification. It extends the Redfish security model in one important way:

• Swordfish implementations shall implement TLS as per the guidance in ISO/IEC 20648 and the TLS Specification for Storage Systems.

8.2 General constraints

8.2.1 Redfish elements

The Swordfish service interface extends the Redfish service interface. As such, a Swordfish service is a Redfish service and all required elements of the Redfish model shall be present in a Swordfish model.

Swordfish functionality shall not conflict with any previously defined Redfish functionality but it may add to or extend it, and it may add additional constraints on Redfish functionality.

Additionally, any functionality desired in a Swordfish implementation that is specified in Redfish shall follow the requirements as specified in the Redfish specification.

8.2.2 Storage Events

8.2.2.1 Overview A Swordfish implementation should implement an event service. Redfish defines the Event Service framework, client subscription model, event delivery mechanism, as well as standard message registries. Swordfish extends the standard message registries to provide additional message registries that correspond to Swordfish-specific services and properties.

The Redfish event service publishes a list of event types supported, and maintains a list of clients that have subscribed. Each subscription maps clients, subscribed events, and the resources that generate them.

8.2.2.2 Message Registry Selection and Management Swordfish constrains the existing event model to provide a more consistent handling of event notifications and the related messages, in order to assure that client systems can easily and consistently parse and respond to system-level events.

8.2.2.3 Required Usage

- The Resource Event Message Registry defines the underlying messaging model, and shall be used to map messages to resources for storage implementations.
- The Redfish Base Message Registry shall be used to support HTTP connection/error/protocol issues, and general errors.
- The Swordfish Message Registry shall be used as a supplement for the resource event message registry.
- If the Swordfish service implements Redfish tasks (i.e., long-running operations), the implementation shall use the messages defined in the Task Event Message Registry to report status.

8.2.2.4 Recommended Usage

- Standard Messages should be used, wherever possible.
- OEM messages should be avoided. Suggestions for clarification or expansion of the existing registries are encouraged. (submissions should be sent to the SNIA Feedback Portal)

8.3 Discovering Swordfish resources

Each Swordfish implementation supports the following well-known URLs, as defined in Redfish. Specifically:

- /Redfish, which contains one or more version properties for the integrated Swordfish and Redfish implementation, starting with v1.
- /Redfish/v1, which addresses a ServiceRoot instance, which defines the Redfish default principal starting information for version 1 implementation of an integrated Redfish and Swordfish service. A GET operation to it shall retrieve the value of an instance of a ServiceRoot EntityType as defined in the Service-Root_v1.xml file.
- /Redfish/v1/odata, which addresses a ServiceContainer instance, which defines OData conformant principal starting information for the same version 1 implementation of an integrated Redfish and Swordfish service. A GET operation shall retrieve the value of an instance of a ServiceContainer EntityContainer as defined in the ServiceRoot_v1.xml file.

Note: Since the ServiceContainer is required to return an @odata.context value

of /redfish/v1, all other elements accessed via it will be the same elements found via the ServiceRoot.

Note: A Swordfish service is a Redfish service with extensions to support storage management. No additional service entry-points are necessary.

Both the ServiceRoot and ServiceContainer contain a resource collection named Systems that lists ComputerSystem instances. A ComputerSystem instance that supports Swordfish defined services will have a value of "StorageServer" in an entry of its HostingRoles property.

The ServiceContainer additionally has a Service attribute that references the ServiceRoot resource.

Regardless of starting point, the property values of the ServiceRoot instance enable navigation to all other resources exposed by the Swordfish service.

8.4 ClassOfService requirements

Each ClassOfService shall include at least one line of service. The providing server shall assure that the line of service values of a ClassOfService collectively represent a supported choice of service.

8.5 StorageSystems requirements

For Hosted Service Configurations, this property of the ServiceRoot references a collection of ComputerSystem resources that each support Swordfish functionality. Each ComputerSystem included in the StorageSystems entry in the ServiceRoot shall have:

- an entry in its HostingRoles property with the value of StorageServer
- at least one entry in its StorageServices.Members property.

For Integrated Service Configurations, the StorageSystems concept is realized through the StorageController resource. Each StorageController instantiated as a Swordfish StorageSystem shall have:

• at least one entry in its StorageController.Links property StorageServices collection identifying related StorageServices

8.6 Entity Sets

The Swordfish model does not currently expose any explicitly defined entity sets. OData specifies that an entity set is defined for each NavigationProperty that is defined as a collection and that has the ContainsTarget attribute set to true. In all other cases, Swordfish assumes that an entity set is defined globally within the implementation for each entity type. This is effectively the same as if the entity sets were explicitly defined in the ServiceRoot entity container.

8.7 Addressing entities within a collection

An instance (entity) of an EntityType is uniquely identified within its entity set by its key. The URI for the reference may specify the key using one of two general strategies

- 1. OData recommends specifying the key value within parenthesis following the path segment that identifies the referencing entity set. (See clause "Canonical URL" in in OData)
- 2. Redfish common practice is to use an alternative form that adds a path segment having the value of the key following the path segment that identifies the referencing collection. (See clause "Alternate Key-as-Segment Syntax" in OData.)

A Swordfish implementation shall support both strategies.

8.8 Addressing members of a ResourceCollection

Redfish specifies that subclasses of ResourceCollection shall include a Members collection property (See clause "Collection resource response" in DSP0266)

Redfish allows a POST request to a ResourceCollection to be equivalent to the same POST request to the Members property of that ResourceCollection. For a particular ResourceCollection, if a Swordfish implementation supports either form, it shall support both.

It is common practice in Redfish to also eliminate the Members property from any request URI that navigates through a type hierarchy that includes a Member within a ResourceCollection. Care should be taken when defining and using a ResourceCollection subclass to not introduce ambiguities when an explicit reference to a Members property is dropped from a request URI.

8.9 HTTP status codes

8.9.1 Overview

Status codes are generally defined as part of the general HTTP protocol definition. In addition, the Redfish specification calls out general usage for HTTP status codes. This section provides additional usage guidance and constraints for Swordfish implementations.

In some instances, Redfish and Swordfish expand the standard use of HTTP status codes by associating additional system status with specific status codes. In addition, error response data may be included via standardized message registry entries. The specific messaging requirements will be defined in the following sections.

In cases where Swordfish adds additional constraints or expands on the Redfish handling of a given issue, this document will include both a clause reference (relative to the 1.7.0 version of the Redfish specification), and a small wording extract for additional context. For example:

Swordfish refines the requirements in **x.y.z** of the *Redfish Specification*: Redfish has no constraint on external storage functionality to require that all references to external storage functionality shall be compliant with the current release of Sword-fish.

8.9.2 Create

If a request to create a resource can be completed successfully without additional time, the Redfish service shall return a status code of 201, and the body of the response shall contain the JSON representation of the newly created resource.

If the create resource request has been accepted, but no information about the resource can be returned at this point, the Redfish service shall return a status code of 204. The payload of the response shall be empty, but the Location header shall contain the resource URI. The client will be required to poll the appropriate resource to determine both when and if the operation is complete.

Swordfish refines the requirements in clauses **7.5.1** and **12.2** of the *Redfish Specification.*

If a request to create a resource cannot be completed without additional time, the implementation shall:

- Populate an initial object. It shall contain, at a minimum, a valid URI, required properties (e.g., ID, name), and Status.State;
- Set Status.State of the partially populated resource to "Creating";
- Return the appropriate status code, based on the following guidance:
 - If a Task Service has been implemented, the Redfish service shall return a status code of 202, with the Location header set to the URI of the Task Monitor. Once the provider has returned a Task Monitor to the client, the Client can then query the provided task URI to track the task completion status. Upon task completion, a GET against the task monitor may return a status code of 201, and the body of the message shall contain the created resource, provided the task monitor URI remains valid. Refer to the Redfish Task Manager documentation for the lifecycle of the task monitor URI.
 - If a Task Service has not been implemented, the Redfish service shall return a status code of 201, and the body of the response shall contain the URI of the skeletal resource created as part of accepting the request. The client will be required to poll the URI provided to determine when the operation is complete.
- Update Status. State for the object, once the create operation completes.

8.9.3 Update, Replace, Delete

If a request to modify or delete a resource can be completed without additional time, the Redfish service shall return a status code of 200, and the body of the response shall contain the JSON representation of the modified (or deleted) resource.

If the resource modification or deletion request has been accepted, but no information about the resource can be returned at this point, the Redfish service shall return a status code of 204. The payload of the response shall be empty. The client will be required to poll the appropriate collection to determine both when and if the operation is complete.

If a request to modify a resource cannot be completed without additional time, the implementation shall:

- Set Status.State of the partially populated resource to "Updating" or "Deleting", as appropriate;
- Return the appropriate status code, based on the following guidance:

- If a Task Service has been implemented, the Redfish service shall return a status code of 202, with the Location header set to the URI of the Task Monitor. Once the provider has returned a Task Monitor to the client, the Client can then query the provided task URI to track the task completion status. Upon task completion, a GET against the task monitor may return a status code of 201, and the body of the message shall contain the created resource, provided the task monitor URI remains valid . Refer to the Redfish Task Manager documentation for the lifecycle of the task monitor URI.
- If a Task Service has not been implemented, the Redfish service shall return a status code of 200, and the body of the response shall contain the URI of the skeletal resource created as part of accepting the request. The client will be required to poll the URI provided to determine when the operation is complete.
- For an update or replace request, the implementation shall update Status.State for the resource, once the modify operation completes.

8.9.4 Actions

Swordfish supports the approach to Actions in **5.6.3** of the *Redfish Specification*: Actions are Redfish operations that do not easily map to RESTful interface semantics. These types of operations may not directly affect properties in the Redfish Resources.

Swordfish refines the requirements in **7.10** of the *Redfish Specification*: Services shall support the POST method to send actions to Resources.

If a Task Service has been implemented, the Redfish service shall return a status code of 202, with the Location header set to the URI of the Task Monitor. Once the provider has returned a Task Monitor to the client, the Client can then query the provided task URI to track the task completion status. Once the task has completed successfully, a GET against the task monitor shall return the created object.

If a Task Service has not been implemented, the Redfish service shall return a status code of 200, and the body of the response shall contain the URI of the skeletal resource created as part of accepting the request. The client will be required to poll the URI provided to determine when the operation is complete. When processing ACTIONS, the handling of HTTP status codes is slightly different than that seen when processing CREATE or MODIFY requests. The HTTP status code is used to reflect the acceptance and formatting of the request. The outcome of any requested processing is reflected in the body of the returned message and its associated Error response structure. For

example, a properly formatted request to execute a system reset may return an HTTP status code of 200 (OK), to reflect that the request has been received, was validly formatted, and has been accepted for processing, while the reset of the system may not complete successfully. The Error response structure would contain further detail of the success of failure of the system reset. The implementation must check both the HTTP status code and the underlying Error response message structure to confirm the successful execution of the ACTION.

9 Swordfish type definitions

9.1 Overview

The following sections define the schema and type definitions that make up a Swordfish implementation. Each data type or entity within the schema includes a description that defines its implementation requirements and their interaction.

9.1.0.1 Properties

Туре	Attributes	Notes
string (URI)	read-only	The value of this property shall be the context URL that describes the resource according to OData-Protocol and shall be of the form defined in the Redfish specification.
string	read-only	The value of this property shall be a string that is defined by the ETag HTTP header definition in RFC7232.
string (URI)	read-only required	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
	string (URI)	string (URI) read-only string read-only

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
@odata.type	string	read-only required	The value of this property shall be a URI fragment that specifies the type of the resource and it shall be of the form defined in the Redfish specification.
Description	string	read-write	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
d	string	read-write	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause or the Redfish Specification.
Name	string	read-write required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Oem {}	object		The manufacturer- or provider-specific extension moniker that divides the Oem object into sections.

9.2 Frequently used properties

In addition, the following properties are frequently defined in Redfish schemas. Their definition and usage is the same throughout the Redfish data model.

9.2.0.1 Properties

Property	Туре	Attributes	Notes
Actions {}	object		The Redfish actions available for this Resource.
Links {}	object		The links associated with the Resource, a defined by that Resource's schema definition. All associated reference properties defined fo a Resource are neste under the Links property. Find all directly referenced, o subordinate, Resource properties from the root of the Resource.

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
RelatedItem [{	array		An array of links. Each
			link points to a
			Resource or part of a
			Resource as defined
			by that Resource's
			schema. This
			representation is not
			intended to be a
			strong linking
			methodology like
			other references.
			Instead, it shows a
			relationship betweer
			elements or
			subelements in
			disparate parts of the
			service. For example
			fans might be in one
			area of the system
			and processors in
			another. The
			relationship betweer
			the two might not be
			obvious. This
			property can show
			that one is related to
			the other. In this
			example, it might
			indicate that a
			specific fan cools a
			specific processor.

Property	Туре	Attributes	Notes
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}]			·

9.3 Common Swordfish Objects

The following structures are included in multiple Swordfish schema, and therefore may be encountered in any Response payload. They are documented here to avoid repetition in the Swordfish Specification tables for each schema.

9.3.1 Capacity

9.3.1.1 Description This composition may be used to represent storage capacity. The sum of the values in Data, Metadata, and Snapshot shall be equal to the total capacity for the data store.

9.3.1.2 Properties The properties defined for the Capacity schema are summarized in Table 12.

Property	Туре	Attributes	Notes
Data {}	object		The value shall be capacity information relating to provisioned user data. For property details, see CapacityInfo.
IsThinProvisioned	boolean	read-only (null)	If the value is false, the capacity shall be fully allocated. The default value shall be false.
Metadata {}	object		The value shall be capacity information relating to provisioned system (non-user accessible data. For property details, see CapacityInfo.
Snapshot {}	object		The value shall be capacity information relating to provisioned snapshot or backup data. For property details, see CapacityInfo.

9.3.2 CapacityInfo

9.3.2.1 Description This composition may be used to represent the utilization of storage capacity.

9.3.2.2 Properties The properties defined for the CapacityInfo schema are summarized in Table 13.

Property	Туре	Attributes	Notes
AllocatedBytes	integer (By)	read-write(null)	The value shall be the number of bytes currently allocated by the storage system in this data store for this data type.
ConsumedBytes	integer (By)	read-only(null)	The value shall be the number of logical bytes currently consumed in this data store for this data type.
GuaranteedBytes	integer (By)	read-write(null)	The value shall be the number of bytes the storage system guarantees can be allocated ir this data store for this data type.
ProvisionedBytes	integer (By)	read-write(null)	The value shall be the maximum number of bytes that can be allocated in this data store for this data type.

Table 13:	CapacityInfo	properties
-----------	--------------	------------

9.3.3 Identifier

9.3.3.1 Description This type shall contain any additional identifiers for a resource.

9.3.3.2 Properties The properties defined for the Identifier schema are summarized in Table 14.

Table 14: Identifier properties

Property	Туре	Attributes	Notes
DurableName (v1.1+)	string	read-only (null)	This property shall contain the world-wide unique identifier for the resource. The string shall be in the Identi- fier.DurableNameForma property value format.
DurableNameForm (v1.1+)	at ring (enum)	read-only(null)	This property shall represent the format of the DurableName property. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>DurableNameFormat in</i> <i>Property details.</i>

9.3.3.3 Property details

9.3.3.1 DurableNameFormat: The defined property values are listed in Table 15. This property shall represent the format of the DurableName property.

Table 15: DurableNameFormat property values

string Description

- EUI This durable name shall contain the hexadecimal representation of the IEEE-defined 64-bit Extended Unique Identifier (EUI), as defined in the IEEE's Guidelines for 64-bit Global Identifier (EUI-64) Specification. The DurableName property shall follow the regular expression pattern '^([0-9A-Fa-f]{2}[:-]){7}([0-9A-Faf]{2})', where the most significant octet is first. ||FC_WWN|This durable name shall contain a hexad WideName(WWN) format, as defined in the T11F ibre Channel Physical and Signaling Inter fac 0.4 = E = f[2](-1)7([0-0.4 = E = f[2])) where the most significant of the significan
 - 9A Fa f]2[: -])7([0 9A Fa f]2)', where the most significant octet is first.
- iQN This durable name shall be in the iSCSI Qualified Name (iQN) format, as defined in RFC3720 and RFC3721.

MACAddhiesssurable name shall be a media access control address (MAC address),

(v1.14+) hich is a unique identifier assigned to a network interface controller (NIC)

for use as a network address. This value should not be used if a more

specific type of identifier is available. The DurableName property shall

follow the regular expression pattern `^([0-9A-Fa-f]{2}[:-]){5}([0-9A-Fa-

 $\label{eq:fight} f]\ensuremath{\{2\}}\ensuremath{)}', where the most significant octet is first. \\ ||NAA| This durable names hall contain a hexa decimed for the state of the$

 $3) specification. The Durable Name property shall follow the regular expression pattern'^{(}([0-1)] + [0,1])$

9A - Fa - f]2)8)1, 2, where the most significant octet is first.

NGUID This durable name shall be in the Namespace Globally Unique Identifier

(v1.10(NGUID), as defined in the NVN Express Specification. The DurableName property shall follow the regular expression pattern '^([0-9A-Fa-f]{2}){16}\$',

where the most significant octet is first.

NQN This durable name shall be in the NVMe Qualified Name (NQN) format, as (v1.6+)defined in the NVN Express over Fabric Specification.

NSID This durable name shall be in the NVM Namespace Identifier (NSID) format,

(v1.6+,as defined in the NVN Express Specification. Deprecated in v1.12 and later.

dep- This value has been deprecated due to its non-uniqueness and NGUID should re- be used.

cated

v1.12)

string Description

UUID This durable name shall contain the hexadecimal representation of the UUID, as defined by RFC4122. The DurableName property shall follow the regular expression pattern '([0-9a-fA-F]{8}-[0-9a-fA-F]{4}-[0-9a-fA-F]{4}-[0-9a-fA-F]{12})'.

9.3.4 IOStatistics

9.3.4.1 Description The properties of this type shall be used to represent the IO statistics of the requested object.

9.3.4.2 Properties The properties defined for the IOStatistics schema are summarized in Table 16.

Table 16: IOStatistics properties

Property	Туре	Attributes	Notes
NonIORequests	integer ({tot})	read-write(null)	The value shall represent the total count from the time of last reset or wrap of non IO requests.
NonIORequestTime	string	read-write (null)	The value shall be an ISO 8601 conformant duration describing the time that the resource is busy processing non IO requests from the time of last reset or wrap.

Property	Туре	Attributes	Notes
Read Hit I O Requests	integer ({tot})	read-write(null)	The value shall represent the total count from the time of last reset or wrap of read IO requests satisfied from memory.
ReadIOKiBytes	integer (KiBy)	read-write(null)	The value shall represent the total number of kibibytes read from the time of last reset or wrap
ReadIORequests	integer ({tot})	read-write(null)	The value shall represent the total count from the time of last reset or wrap of read IO requests satisfied from either media or memory (i.e. fror a storage device or from a cache)
ReadIORequestTime	e string	read-write (null)	The value shall b an ISO 8601 conformant duration describing the time that the resource is busy processing read requests from th time of last reset or wrap.

Property	Туре	Attributes	Notes
WriteHitIORequest	integer ({tot})	read-write(null)	The value shall represent the total count from the time of last reset or wrap of write IO requests coalesced into memory.
Writel OKi Bytes	integer (KiBy)	read-write(null)	The value shall represent the total number of kibibytes written from the time of last reset or wrap
WriteIORequests	integer ({tot})	read-write(null)	The value shall represent the total count from the time of last reset or wrap of write IO requests
WriteIORequestTim	e string	read-write (null)	The value shall be an ISO 8601 conformant duration describing the time that the resource is busy processing write requests from the time of last reset or wrap.

9.3.5 IOWorkload

9.3.5.1 Description This structure may be used to describe an IO Workload.

9.3.5.2 Properties The properties defined for the IOWorkload schema are summarized in Table 17.

Property	Туре	Attributes	Notes
Components [{ }]	array (object)	* (null)*	The value shall be an array of IO workload component descriptions. For property details, see IOWorkloadComponen
Name	string	read-write (null)	IOWorkloadComponer The value shall be a name of the workload It should be constructed as OrgID:WorkloadID. Examples: ACME:DSS, ACME:DSS-REP, ACME:CLTP, ACME:OLTP, ACME:OLTP, ACME:OLTP-REPA. An organization may define a set of well

Table 17: IOWorkload properties

9.3.6 IOWorkloadComponent

9.3.6.1 Description This structure may be used to describe a component of an IO workload.

9.3.6.2 Properties The properties defined for the IOWorkloadComponent schema are summarized in Table 18.

Property	Туре	Attributes	Notes
AveragelOBytes	integer (By)	read-write(null)	The value shall be the expected average I/O size.
Duration	string (s)	read-write(null)	The value of each entry shall be an ISO 8601 duration that shall specify the expected length of time tha this component is applied to the workload. This attribute shall be specified if a schedule is specified and otherwise shall not be specified.
IOAccessPattern	string (enum)	read-write(null)	The enumeration literal shall be the expected access pattern. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>IOAccessPattern ir</i> <i>Property details.</i>
PercentOfData	integer (%)	read-write(null)	The value shall be the expected percent of the data referenced by the workload that is covered by this component.

Property	Туре	Attributes	Notes
PercentOfIOPS	integer (%)	read-write(null)	The value shall be the expected percent of the total IOPS for this workload that is covered by this component.
Schedule {}	object		The value shall specifies when this workload component is applied to the overall workload. For property details, see Schedule v1.2.2).

9.3.6.3 Property details

9.3.6.3.1 IOAccessPattern: The defined property values are listed in Table 19. The enumeration literal shall be the expected access pattern.

Table 19: IOAccessPattern property values

string	Description
RandomReadAgain	Use of this enumeration literal shall indicate an access pattern of random reads of cached data.
RandomReadNew	Use of this enumeration literal shall indicate an access pattern of random reads of uncached data.
ReadWrite	Use of this enumeration literal shall indicate a Uniform distribution of reads and writes.
SequentialRead	Use of this enumeration literal shall indicate a sequential read pattern of access.

string	Description
SequentialWrite	Use of this enumeration literal shall indicate a sequential write pattern of access.

9.3.7 Location

9.3.7.1 Description This type shall describe the location of a resource.

9.3.7.2 Properties The properties defined for the Location schema are summarized in Table 20.

Table 20: Location properties

Property	Туре	Attributes	Notes
AltitudeMeters (v1.6+)	number (m)	read-write(null)	This property shall contain the altitude of the resource, in meters units, defined as the elevation above sea level.
Contacts (v1.7+) [{	array		This property shall contain an array of contact information for an individual or organization responsible for this resource.

Property	Туре	Attributes	Notes
ContactName (v1.7+)	string	read-write (null)	This property shall contain the name of a person or organization to contact for information about this resource.
EmailAddress (v1.7+)	string	read-write (null)	This property shall contain the email address for a person or organization to contact for information about this resource.
PhoneNumber (v1.7+)	string	read-write (null)	This property shall contain the phone number for a person or organization to contact for information about this resource.

}]

Property	Туре	Attributes	Notes
Info (v1.1+, deprecated v1.5	string	read-only (null)	This property shall represent the location of the resource. Deprecated in v1.5 and later. This property has been deprecated in favor of the PostalAddress, Placement, and PartLocation properties.
InfoFormat (v1.1+, deprecated v1.5	string	read-only (null)	This property shall represent the Info property format. Deprecated in v1.5 and later. This property has been deprecated in favor of the PostalAddress, Placement, and PartLocation properties.
Latitude (v1.6+)	number (deg)	read-write(null)	This property shall contain the latitude of the resource specified in degrees using a decimal format and not minutes or seconds.

Property	Туре	Attributes	Notes
Longitude (v1.6+)	number (deg)	read-write(null)	This property shall contain the longitude of the resource specified in degrees using a decimal format and not minutes or seconds.
Oem (v1.1+) {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem
PartLocation (v1.5+) {	object		This property shall contain the part location for resource within an enclosure. This representation shall indicate the location of a par within a location specified by the Placement property.

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
LocationOrdinal- /alue (v1.5+)	integer	read-only (null)	This property shall contain the number that represents the location of the part based on the LocationType. LocationOrdinal- Value shall be measured based on the Orientation value starting with 0.
LocationType (v1.5+)	string (enum)	read-only(null)	This property shall contain the type of location of the part. For the possible property values, see LocationType in Property details.
Orientation (v1.5+)	string (enum)	read-only(null)	This property shall contain the orientation for the ordering used by the Loca- tionOrdinalValue property. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>Orientation in</i> <i>Property details.</i>

Property	Туре	Attributes	Notes
Reference (v1.5+)	string (enum)	read-only(null)	This property shall contain the general location within the unit of the part. For the possible property values, see Reference in Property details.
ServiceLabel (v1.5+)	string	read-only (null)	This property shall contain the label assigned fo service at the part location.
Placement (v1.3+) {	object		This property shall contain a place within the addressed location.
AdditionalInfo (v1.7+)	string	read-write (null)	This property shall contain additional information, such as Tile, Column (Post), Wall, or other designation that describes a location that cannot be conveyed with other properties defined for the Placement object.

Property	Туре	Attributes	Notes
Rack (v1.3+)	string	read-write (null)	This property shall contain the name of the rack within a row.
RackOffset (v1.3+)	integer	read-write (null)	The vertical location of the item in the rack. Rack offset units shall be measured from bottom to top, starting with 0.
RackOffsetUnits (v1.3+)	string (enum)	read-write(null)	This property shall contain a RackUnit enumeration literal that indicates the type of rack units in use. For the possible property values, see RackOffsetUnits in Property details.
Row (v1.3+)	string	read-write (null)	This property shall contain the name of the row.
} PostalAddress (v1.3+) {	object		This property shall contain a postal address of the resource.

Property	Туре	Attributes	Notes
AdditionalCode (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the ADDCODE field.
AdditionalInfo (v1.7+)	string	read-write (null)	The value shall conform to the requirements of the LOC field as defined in RFC5139. Provides additional information.
Building (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the BLD field. Names the building.
City (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A3 field. Names a city, township, or shi (JP).

Property	Туре	Attributes	Notes
Community (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the PCN field. A postal community name.
Country (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the Country field
District (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A2 field. Names a county parish, gun (JP), or district (IN).
Division (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A4 field. Names a city division, boroug city district, ward or chou (JP).

Property	Туре	Attributes	Notes
Floor (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the FLR field. Provides a floor designation.

Property	Туре	Attributes	Notes
HouseNumber (v1.3+)	integer	read-write (null)	The value shall conform to the RFC5139-defined requirements of the HNO field. The numeric portion of the house number.
HouseNumberSuffix (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the HNS field. Provides a suffix to a house number, (F, B, or 1/2).
Landmark (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the LMK field. Identifies a landmark or vanity address.
LeadingStreetDi- rection (v1.3+)	string	read-write (null)	The value shall conform to the requirements of the PRD field as defined in RFC5139. Names a leading street direction, (N, W, or SE).

Property	Туре	Attributes	Notes
Location (v1.3+, deprecated v1.7	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the LOC field. Provides additional information. Deprecated in v1.7 and later. This property has been deprecated in favor of the AdditionalInfo property.
Name (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the NAM field. Names the occupant.
Neighborhood (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A5 field. Names a neighborhood or block.

Property	Туре	Attributes	Notes
PlaceType (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the PLC field. Examples include office and residence.
POBox (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the POBOX field. A post office box (PO box).
PostalCode (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the PC field. A postal code (or zip code).
Road (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the RD field. Designates a primary road or street.

Property	Туре	Attributes	Notes
RoadBranch (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the RDBR field. Shall contain a post office box (PO box) road branch.
RoadPostModifier (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the POM field. For example, Extended.
RoadPreModifier (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the PRM field. For example, Old or New.
RoadSection (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the RDSEC field. <i>A</i> road section.
RoadSubBranch (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the RDSUBBR field.

Property	Туре	Attributes	Notes
Room (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the ROOM field. <i>A</i> name or number of a room to locate the resource within the unit.
Seat (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the SEAT field. A name or number of a seat, such as the desk, cubicle or workstation.
Street (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A6 field. Names a street.
StreetSuffix (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the STS field. Names a street suffix.

Swordfish Scalable	Storage Management	API Specification
Sworumshi Scalabic	Storage management	An opeen cation

Property	Туре	Attributes	Notes
Territory (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the A1 field when it names a territory, state, region, province, or prefecture within a country.
TrailingStreetSuffix (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the POD field. Names a trailing street suffix.
Unit (v1.3+)	string	read-write (null)	The value shall conform to the RFC5139-defined requirements of the UNIT field. The name or number of a unit such as the apartment or suite, to locate the resource.

9.3.7.3 Property details

9.3.7.3.1 LocationType: The defined property values are listed in Table 21. This property shall contain the type of location of the part.

string	Description
Backplane (v1.12+)	This value shall indicate the part is a backplane in an enclosure.
Вау	This value shall indicate the part is located in a bay.
Connector	This value shall indicate the part is located in a connector or port.
Embedded <i>(v1.13+)</i>	This value shall indicate the part is embedded or otherwise permanently incorporated into a larger part or device. This value shall not be used for parts that can be removed by a user or are considered field-replaceable.
Slot	This value shall indicate the part is located in a slot.
Socket	This value shall indicate the part is located in a socket.

Table 21: LocationType property values ##### Orientation:

The defined property values are listed in Table 22. This property shall contain the orientation for the ordering used by the LocationOrdinalValue property.

string	Description
BackToFront	This value shall indicate the ordering for LocationOrdinalValue is back to front.
BottomToTop	This value shall indicate the ordering for LocationOrdinalValue is bottom to top.
FrontToBack	This value shall indicate the ordering for LocationOrdinalValue is front to back.
LeftToRight	This value shall indicate the ordering for LocationOrdinalValue is left to right.
RightToLeft	This value shall indicate the ordering for LocationOrdinalValue is right to left.
TopToBottom	This value shall indicate the ordering for LocationOrdinalValue is top to bottom.

Table 22: Orientation property values ##### RackOffsetUnits:

The defined property values are listed in Table 23. This property shall contain a Rack-Unit enumeration literal that indicates the type of rack units in use.

string	Description
EIA_310	Rack units shall conform to the EIA-310 standard.
OpenU	Rack units shall be specified in terms of the Open Compute Open Rack Specification.

Table 23: RackOffsetUnits property values ##### Reference:

The defined property values are listed in Table 24. This property shall contain the general location within the unit of the part.

string	Description
Bottom	This value shall indicate the part is in the bottom of the unit.
Front	This value shall indicate the part is in the front of the unit.
Left	This value shall indicate the part is on the left side of of the unit.
Middle	This value shall indicate the part is in the middle of the unit.
Rear	This value shall indicate the part is in the rear of the unit.
Right	This value shall indicate the part is on the right side of the unit.
Тор	This value shall indicate the part is in the top of the unit.

9.3.8 Oem

9.3.8.1 Description This object represents the OEM properties. The resource values shall comply with the Redfish Specification-described requirements.

9.3.8.2 Properties The properties defined for the Oem schema are summarized in Table 25.

Table 25: Oem properties

Property	Туре	Attributes	Notes
(pattern) {}	object		Property names follow regular expression pattern "^[A-Za-z0-9_]+\$"

9.3.9 ReplicaInfo

9.3.9.1 Description The value shall define the characteristics of a replica.

9.3.9.2 Properties The properties defined for the ReplicaInfo schema are summarized in Table 26.

Table 26: ReplicaInfo properties

Property	Туре	Attributes	Notes
ConsistencyEnabled	boolean	read-only (null)	If true, consistency shall be enabled across the source and its associated target replica(s). The default value for this property is false.
ConsistencyState	string (enum)	read-only(null)	The ConsistencyState enumeration literal shall indicate the current state of consistency. For the possible property values, see ConsistencyState in Property details.

Property	Туре	Attributes	Notes
ConsistencyStatus	string (enum)	read-only(null)	The ConsistencyStatus enumeration literal shall specify the current status of consistency. Consistency may have been disabled or is experiencing an error condition. For the possible property values, see ConsistencyStatus in Property details.
ConsistencyType	string (enum)	read-only(null)	The ConsistencyType enumeration literal shall indicate the consistency type used by the source and its associated target group. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ConsistencyType in</i> <i>Property details.</i>
DataProtectionLineOfSenhyizzet (v1.1+) {			The value shall be a pointer to the data protection line of service that describes this replica. See the <i>DataProtectionLine-</i> <i>OfService</i> schema for details on this property.

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a DataProtec- tionLineOfService resource. See the Links section and the <i>DataProtectionLine-</i> <i>OfService</i> schema for details.
FailedCopyStopsHost	IO boolean	read-only (null)	If true, the storage array shall stop receiving data to the source element if copying to a remote element fails. The default value for this property is false.
PercentSynced	integer (%)	read-only(null)	Specifies the percent of the work completed to reach synchronization. Shall not be instantiated if implementation is no capable of providing this information. If related to a group, then PercentSynced shall be an average of the PercentSynced across all members of the group.

Property	Туре	Attributes	Notes
Replica {	object		Deprecated - Use Source Replica. The value shall reference the resource that is the source of this replica.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfis specification.
} ReplicaFaultDomain (v1.3+)	string (enum)	read-only(null)	The ReplicaFaultDomain enumeration literal shall describe the fault domain (local o remote) of the replica relationship. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReplicaFaultDomain</i> <i>in Property details.</i>

Property Type	Attributes	Notes
ReplicaPriority string (enum)	read-only(null)	The enumeration literal shall specify the priority of background copy engine I/O to be managed relative to host I/O operations during a sequential background copy operation. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReplicaPriority in</i> <i>Property details.</i>
ReplicaProgressStatus string (enum)	read-only(null)	The ReplicaPro- gressStatus enumeration literal shall specify the status of the session with respect to Replication activity. For the possible property values, see ReplicaProgressSta- tus in Property details
ReplicaReadOnlyAccess string (enum)	read-only(null)	The enumeration literal shall specify whether the source, the target, or both elements are read only to the host. For the possible property values, see Repli- caReadOnlyAccess in Property details.

Property	Туре	Attributes	Notes
ReplicaRecoveryMode		read-only(null)	The enumeration literal shall specify whether the copy operation continues after a broken link is restored. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReplicaRecoveryMode</i> <i>in Property details.</i>
ReplicaRole	string (enum)	read-only(null)	The ReplicaRole enumeration literal shall represent the source or target role of this replica as known to the containing resource. <i>For the possible</i> <i>property values, see</i> <i>ReplicaRole in</i> <i>Property details.</i>
ReplicaSkewBytes	integer (By)	read-only(null)	Applies to Adaptive mode and it describe maximum number of bytes the SyncedElement (target) can be out of sync. If the number of out-of-sync bytes exceeds the skew value, ReplicaUpdateMode shall be switched to synchronous.

Property	Туре	Attributes	Notes
ReplicaState	string (enum)	read-only(null)	The ReplicaState enumeration literal shall specify the state of the relationship with respect to Replication activity. For the possible property values, see ReplicaState in Property details.
ReplicaType	string (enum)	read-only(null)	The ReplicaType enumeration literal shall describe the intended outcome of the replication. <i>For</i> <i>the possible property</i> <i>values, see</i> <i>ReplicaType in</i> <i>Property details.</i>
ReplicaUpdateMode	string (enum)	read-only(null)	The enumeration literal shall specify whether the target elements will be updated synchronously or asynchronously. For the possible property values, see ReplicaUpdateMode in Property details.

Property	Туре	Attributes	Notes
RequestedReplicaStat	e string (enum)	read-only(null)	The last requested or desired state for the relationship. The actual state of the relationship shall be represented by ReplicaState. When RequestedState reaches the requested state, this property shall be null. For the possible property values, see Requeste- dReplicaState in Property details.
SourceReplica (v1.2+) {	object		The value shall reference the resource that is the source of this replica.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
} SyncMaintained	boolean	read-only (null)	If true, Synchronization shal be maintained. The default value for this property is false.

Property	Туре	Attributes	Notes
UndiscoveredElement	string (enum)	read-only(null)	The enumeration literal shall specify whether the source, the target, or both elements involved in a copy operation are undiscovered. An element is considered undiscovered if its object model is not known to the service performing the copy operation. For the possible property values, see UndiscoveredElement in Property details.
WhenActivated	string (%)	read-only(null)	The value shall be an ISO 8601 conformant time of day that specifies when the point-in-time copy was taken or when the replication relationship is activated, reactivated resumed or re-established. This property shall be nul if the implementatio is not capable of providing this information.

Due a cutu i	T e	Attu:	Notos
Property	Туре	Attributes	Notes
WhenDeactivated	string (%)	read-only(null)	The value shall be an ISO 8601 conformant time of day that specifies when the replication relationship is deactivated. Do not instantiate this property if implementation is no capable of providing this information.
WhenEstablished	string (%)	read-only(null)	The value shall be an ISO 8601 conformant time of day that specifies when the replication relationship is established. Do not instantiate this property if implementation is not capable of providing this information.
WhenSuspended	string (%)	read-only(null)	The value shall be an ISO 8601 conformant time of day that specifies when the replication relationship is suspended. Do not instantiate this property if implementation is no capable of providing this information.

Property	Туре	Attributes	Notes
WhenSynced	string	read-only (null)	The value shall be an ISO 8601 conformant time of day that specifies when the elements were synchronized.
WhenSynchronized	string (%)	read-only(null)	The value shall be an ISO 8601 conformant time of day that specifies when the replication relationship is synchronized. Do not instantiate this property if implementation is no capable of providing this information.

9.3.9.3 Property details

9.3.9.3.1 ConsistencyState: The defined property values are listed in Table 27. The ConsistencyState enumeration literal shall indicate the current state of consistency.

string	Description
Consistent	This enumeration literal shall indicate that the source and target shall be consistent.
Inconsistent	This enumeration literal shall indicate that the source and target are not required to be consistent.

The defined property values are listed in Table 28. The ConsistencyStatus enumeration

literal shall specify the current status of consistency. Consistency may have been disabled or is experiencing an error condition.

string	Description
Consistent	This enumeration literal shall indicate that the source and target are consistent.
Disabled	This enumeration literal shall indicate that the source and target have consistency disabled.
InError	This enumeration literal shall indicate that the source and target are not consistent.
InProgress	This enumeration literal shall indicate that the source and target are becoming consistent.

Table 28: ConsistencyStatus property values ##### ConsistencyType:

The defined property values are listed in Table 29. The ConsistencyType enumeration literal shall indicate the consistency type used by the source and its associated target group.

Table 29: ConsistencyType property values ##### ReplicaFaultDomain:

string	Description	
SequentiallyConsistent	This enumeration literal shall indicate that the source and target shall be sequentially consistent.	

The defined property values are listed in Table 30. The ReplicaFaultDomain enumeration literal shall describe the fault domain (local or remote) of the replica relationship.

Table 30: ReplicaFaultDomain property values ##### ReplicaPriority:

string	Description
Local	This enumeration literal shall indicate that the source and target replicas are contained within a single fault domain.

string	Description
Remote	This enumeration literal shall indicate that the source and target replicas are in separate fault domains.

The defined property values are listed in Table 31. The enumeration literal shall specify the priority of background copy engine I/O to be managed relative to host I/O operations during a sequential background copy operation.

Table 31: ReplicaPriority property values ##### ReplicaProgressStatus:	

string	Description
High	Copy engine I/O shall have a higher priority than host I/O.
Low	Copy engine I/O shall have a lower priority than host I/O.
Same	Copy engine I/O shall have the same priority as host I/O.
Urgent	Regardless of the host I/O requests, the Copy operation shall be performed as soon as possible.

The defined property values are listed in Table 32. The ReplicaProgressStatus enumeration literal shall specify the status of the session with respect to Replication activity.

 Table 32:
 ReplicaProgressStatus property values ##### ReplicaReadOnlyAccess:

string	Description
Aborting	This enumeration literal shall indicate that replication has an abort in progress.
Completed	This enumeration literal shall indicate that the request is completed. Data flow is idle.
Detaching	This enumeration literal shall indicate that replication has a detach in progress.
Dormant	This enumeration literal shall indicate that the data flow is inactive, suspended or quiesced.

string	Description
FailingBack	This enumeration literal shall indicate that replication is undoing the result of failover.
FailingOver	This enumeration literal shall indicate that replication is ir the process of switching source and target.
Fracturing	This enumeration literal shall indicate that replication has a fracture in progress.
Initializing	This enumeration literal shall indicate that replication is ir the process of establishing source/replica relationship and the data flow has not started.
Mixed	This enumeration literal shall indicate that replication status is mixed across element pairs in a replication group Generally, the individual statuses need to be examined.
Pending	This enumeration literal shall indicate that the flow of data has stopped momentarily due to limited bandwidth or a busy system.
Preparing	This enumeration literal shall indicate that replication has preparation in progress.
RequiresActivate	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be activated before further copy operations can be issued.
RequiresDetach	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be detached before further copy operations can be issued.
RequiresFracture	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be fractured before further copy operations can be issued.
RequiresResume	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be resumed before further copy operations can be issued.

string	Description
RequiresResync	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be resynced before further copy operations can be issued.
RequiresSplit	This enumeration literal shall indicate that the requested operation has completed, however, the synchronization relationship needs to be split before further copy operations can be issued.
Restoring	This enumeration literal shall indicate that replication has a restore in progress.
Resyncing	This enumeration literal shall indicate that replication has resynchronization in progress.
Splitting	This enumeration literal shall indicate that replication has a split in progress.
Suspending	This enumeration literal shall indicate that replication has a copy operation in the process of being suspended.
Synchronizing	This enumeration literal shall indicate that replication has synchronization in progress.
Terminating	This enumeration literal shall indicate that the replication relationship is in the process of terminating.

The defined property values are listed in Table 33. The enumeration literal shall specify whether the source, the target, or both elements are read only to the host.

string	Description
Both	Both the source and the target elements shall be read only to the host.
ReplicaElement	The replica element shall be read-only to the host.
SourceElement	The source element shall be read-only to the host.

 Table 33:
 ReplicaReadOnlyAccess
 property values
 #####
 ReplicaRecoveryMode:

The defined property values are listed in Table 34. The enumeration literal shall specify

whether the copy operation continues after a broken link is restored.

Table 34: ReplicaRecoveryMode property values ##### ReplicaRole:

string	Description
Automatic	The copy operation shall resume automatically.
Manual	The ReplicaState shall be set to Suspended after the link is restored. It is required to issue the Resume operation to continue.

The defined property values are listed in Table 35. The ReplicaRole enumeration literal shall represent the source or target role of this replica as known to the containing resource.

Table 35: ReplicaRole property values ##### ReplicaState:

string	Description
Source	This enumeration literal shall indicate a source element.
Target	This enumeration literal shall indicate target element.

The defined property values are listed in Table 36. The ReplicaState enumeration literal shall specify the state of the relationship with respect to Replication activity.

Table 36: ReplicaState property values ##### ReplicaType:

string	Description
Aborted	This enumeration literal shall indicate that the copy operation is aborted with the Abort operation. The Resync Replica operation can be used to restart the copy operation.
Broken	This enumeration literal shall indicate that the relationship is non-functional due to errors in the source, the target, the path between the two or space constraints.

string	Description
Failedover	This enumeration literal shall indicate that the reads and writes are sent to the target element. The source element may not be reachable.
Fractured	This enumeration literal shall indicate that the Target is split from the source. The target may not be consistent.
Inactive	This enumeration literal shall indicate that data flow has stopped, writes to source element shall not be sent to target element.
Initialized	This enumeration literal shall indicate that the link to enable replication is established and source/replica elements are associated, but the data flow has not started.
Invalid	This enumeration literal shall indicate that the storage server is unable to determine the state of the replication relationship, for example, after the connection is restored; however, either source or target elements have an unknown status.
Mixed	This enumeration literal shall indicate the ReplicaState of GroupSynchronized. The value indicates the StorageSynchronized relationships of the elements in the group have different ReplicaState values.
Partitioned	This enumeration literal shall indicate that the state of replication relationship can not be determined, for example due to a connection problem.
Prepared	This enumeration literal shall indicate that initialization is completed, however, the data flow has not started.
Restored	This enumeration literal shall indicate that the source element was restored from the target element.
Skewed	This enumeration literal shall indicate that the target has been modified and is no longer synchronized with the source element or the point-in-time view.
Split	This enumeration literal shall indicate that the target element was gracefully (or systematically) split from its source element – consistency shall be guaranteed.

string	Description
Suspended	This enumeration literal shall indicate that the data flow between the source and target elements has stopped. Writes to source element shall be held until the relationship is Resumed.
Synchronized	This enumeration literal shall indicate that for Mirror, Snapshot, or Clone replication, the target represents a copy of the source.
Unsynchronized	This enumeration literal shall indicate that not all the source element data has been copied to the target element.

The defined property values are listed in Table 37. The ReplicaType enumeration literal shall describe the intended outcome of the replication.

Table 37: ReplicaType property values ##### ReplicaUpdateMode:

string	Description
Clone	This enumeration literal shall indicate that replication shall create a point in time, full copy the source.
Mirror	This enumeration literal shall indicate that replication shall create and maintain a copy of the source.
Snapshot	This enumeration literal shall indicate that replication shall create a point in time, virtual copy of the source.
TokenizedClone	This enumeration literal shall indicate that replication shall create a token based clone.

The defined property values are listed in Table 38. The enumeration literal shall specify whether the target elements will be updated synchronously or asynchronously.

string	Description
Active	This enumeration literal shall indicate Active-Active (i.e. bidirectional) synchronous updates.
Adaptive	This enumeration literal shall indicate that an implementation may switch between synchronous and asynchronous modes.
Asynchronous	This enumeration literal shall indicate Asynchronous updates.
Synchronous	This enumeration literal shall indicate Synchronous updates.

Table 38: ReplicaUpdateMode property values ##### RequestedReplicaState:

The defined property values are listed in Table 39. The last requested or desired state for the relationship. The actual state of the relationship shall be represented by ReplicaState. When RequestedState reaches the requested state, this property shall be null.

string	Description
Aborted	This enumeration literal shall indicate that the copy operation is aborted with the Abort operation. The Resync Replica operation can be used to restart the copy operation.
Broken	This enumeration literal shall indicate that the relationship is non-functional due to errors in the source, the target, the path between the two or space constraints.
Failedover	This enumeration literal shall indicate that the reads and writes are sent to the target element. The source element may not be reachable.
Fractured	This enumeration literal shall indicate that the Target is split from the source. The target may not be consistent.

Table 39: Requested Replica State property values ##### Undiscovered Element:

string	Description
Inactive	This enumeration literal shall indicate that data flow has stopped, writes to source element shall not be sent to target element.
Initialized	This enumeration literal shall indicate that the link to enable replication is established and source/replica elements are associated, but the data flow has not started
Invalid	This enumeration literal shall indicate that the storage server is unable to determine the state of the replication relationship, for example, after the connection is restored; however, either source or target elements have an unknowr status.
Mixed	This enumeration literal shall indicate the ReplicaState of GroupSynchronized. The value indicates the StorageSynchronized relationships of the elements in the group have different ReplicaState values.
Partitioned	This enumeration literal shall indicate that the state of replication relationship can not be determined, for example due to a connection problem.
Prepared	This enumeration literal shall indicate that initialization is completed, however, the data flow has not started.
Restored	This enumeration literal shall indicate that the source element was restored from the target element.
Skewed	This enumeration literal shall indicate that the target has been modified and is no longer synchronized with the source element or the point-in-time view.
Split	This enumeration literal shall indicate that the target element was gracefully (or systematically) split from its source element – consistency shall be guaranteed.
Suspended	This enumeration literal shall indicate that the data flow between the source and target elements has stopped. Writes to source element shall be held until the relationship is Resumed.

string	Description
Synchronized	This enumeration literal shall indicate that for Mirror, Snapshot, or Clone replication, the target represents a copy of the source.
Unsynchronized	This enumeration literal shall indicate that not all the source element data has been copied to the target element.

The defined property values are listed in Table 40. The enumeration literal shall specify whether the source, the target, or both elements involved in a copy operation are undiscovered. An element is considered undiscovered if its object model is not known to the service performing the copy operation.

 Table 40: UndiscoveredElement property values

string	Description
ReplicaElement	This enumeration literal shall indicate that the replica element is undiscovered.
SourceElement	This enumeration literal shall indicate that the source element is undiscovered.

9.3.10 ReplicaRequest

9.3.10.1 Description A ReplicaRequest shall contain information about the ReplicaSource and the ReplicaName.

9.3.10.2 Properties The properties defined for the ReplicaRequest schema are summarized in Table 41.

Table 41: ReplicaRequest properties

Property	Туре	Attributes	Notes
ReplicaName (v1.1+)	string	read-write (null)	The value shall be the names of the replica.

unique identifier for the resource and it shall be of the form defined in the Redfis	Property	Туре	Attributes	Notes
property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish	-	object		reference a resource
	@odata.id	string (URI)	read-only	property shall be the unique identifier for the resource and it

9.3.11 Schedule

9.3.11.1 Description The properties of this type shall schedule a series of occurrences.

9.3.11.2 Properties The properties defined for the Schedule schema are summarized in Table 42.

Table 42: Schedule properties

Property	Туре	Attributes	Notes
EnabledDa	ysQaffMaoynt	h read-write	This property shall contain the days of
[]	(inte-		the month when scheduled occurrences
	ger,		are enabled, for enabled days of week
	null)		and months of year. If the array
			contains a single value of 0, or if the
			property is not present, all days of the
			month shall be enabled.

Property	Туре	Attributes	Notes
EnabledDay	ys QifWigek (string (enum))	read-write(null)	Days of the week when scheduled occurrences are enabled. If not present all days of the week shall be enabled. For the possible property values, see EnabledDaysOfWeek in Property details.
EnabledInt((v1.1+) []	ervæts ay (string, null)	read-write	Each value shall be an ISO 8601 conformant interval specifying when occurrences are enabled.
EnabledMo	ntlasOfyYea (string (enum))	r read-write(null)	This property shall contain the months of the year when scheduled occurrences are enabled, for enabled days of week and days of month. If not present, all months of the year shall be enabled. For the possible property values, see EnabledMonthsOfYear in Property details.
InitialStart	Time ring (date- time)	read-write(null)	This property shall contain the date and time when the initial occurrence is scheduled to occur.
Lifetime	string	read-write (null)	This property shall contain a Redfish Duration that describes the time after provisioning when the schedule expires. Pattern: -?P(+D)?(T(+H)?(+M)?(+(.+)?S)?)?
MaxOccurro	endeseger	read-write (null)	This property shall contain the maximum number of scheduled occurrences.
Name	string	read-write (null)	The name of the schedule, which is constructed as OrgID:ScheduleName. Examples include ACME:Daily, ACME:Weekly, and ACME:FirstTuesday.

Property	Туре	Attributes	Notes
Recurrence	Intstrivag	read-write (null)	This property shall contain a Redfish Duration that describes the time until the next occurrence. Pattern: -?P(+D)?(T(+H)?(+M)?(+(.+)?S)?)?

9.3.11.3 Property details

9.3.11.3.1 EnabledDaysOfWeek: The defined property values are listed in Table 43. Days of the week when scheduled occurrences are enabled. If not present, all days of the week shall be enabled.

string	Description
Every	This value indicates that every day of the week has been selected. When used in array properties, such as for enabling a function on certain days, it shall be the only member in the array.
Friday	
Monday	
Saturday	
Sunday	
Thursday	
Tuesday	
Wednesday	

 Table 43:
 EnabledDaysOfWeek property values ##### EnabledMonthsOfYear:

The defined property values are listed in Table 44. This property shall contain the months of the year when scheduled occurrences are enabled, for enabled days of week and days of month. If not present, all months of the year shall be enabled.

string	Description
April	
August	
December	
Every	This value indicates that every month of the year has been selected. When used in array properties, such as for enabling a function for certain months, it shall be the only member in the array.
February	
January	
July	
June	
March	
Мау	
November	
October

Table 44: EnabledMonthsOfYear property values

9.3.12 Status

9.3.12.1 Description This type shall contain any status or health properties of a resource.

9.3.12.2 Properties The properties defined for the Status schema are summarized in Table 45.

Table 45: Status properties

Property	Туре	Attributes	Notes
Conditions (v1.11+)	array		This property shall represent the active conditions requiring attention in this or a related resource that affects the Health or HealthRollup of this resource. The service may roll up multiple conditions originating from a resource, using the ConditionInRe- latedResource message from Base Message Registry.
LogEntry {	object		This property shall contain a link to a resource of type LogEntry that represents the log entry created for this condition.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

Property	Туре	Attributes	Notes
Message	string	read-only	This property shall contain a human-readable message describing this condition.
MessageArgs []	array (string)	read-only	This property shall contain an array of message arguments that are substituted for the arguments in the message when looked up in the message registry. It has the same semantics as the MessageArgs property in the Redfish MessageRegistry schema.
MessageId	string	read-only required	This property shall contain a Messageld, as defined in the 'Messageld format' clause of the Redfish Specification.
OriginOfCondi- tion {	object		This property shall contain a link to the resource or object that originated the condition. This property shall not be present if the condition was caused by this resource.

Property	Туре	Attributes	Notes
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
Resolution (v1.14+)	string	read-only	This property shall contain the resolution of the condition. Services should replace the resolution defined in the message registry with a more specific resolution.
Severity	string (enum)	read-only	This property shall contain the severity of the condition. Services can replace the value defined in the message registry with a value more applicable to the implementation. For the possible property values, see Severity in Property details.
Timestamp	string (date- time)	read-only	This property shall indicate the time the condition occurred.

}]

Property	Туре	Attributes	Notes
Health	string (enum)	read-only(null)	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification For the possible property values, see Health in Property details.
HealthRollup	string (enum)	read-only(null)	This property shall represent the health state of the resource and its dependent resources. The value shall conform to those defined in the Redfish Specification For the possible property values, see HealthRollup in Property details.
0em {	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements.

Property	Туре	Attributes	Notes
(pattern) {}	object		Property names follow regular expression pattern "^[A-Za-z0-9_]+\$"
State	string (enum)	read-only(null)	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it car be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable. For the possible property values, see State in Property details.

9.3.12.3 Property details

9.3.12.3.1 Health: The defined property values are listed in Table 46. This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.

Table 46: Health property values ##### HealthRollup:

string	Description
Critical	A critical condition requires immediate attention.
ОК	Normal.
Warning	A condition requires attention.

The defined property values are listed in Table 47. This property shall represent the health state of the resource and its dependent resources. The values shall conform to those defined in the Redfish Specification.

Table 47: HealthRollup property values ##### Severity:

string	Description
Critical	A critical condition requires immediate attention.
ОК	Normal.
Warning	A condition requires attention.

The defined property values are listed in Table 48. This property shall contain the severity of the condition. Services can replace the value defined in the message registry with a value more applicable to the implementation.

 Table 48: Severity property values ##### State:

string	Description
Critical	A critical condition requires immediate attention.
ОК	Normal.
Warning	A condition requires attention.

The defined property values are listed in Table 49. This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.

string	Description
Absent	This function or resource is either not present or detected.
Deferring (v1.2+)	The element does not process any commands but queues new requests.
Disabled	This function or resource is disabled.
Enabled	This function or resource is enabled.
InTest	This function or resource is undergoing testing, or is in the process of capturing information for debugging.
Qualified (v1.9+)	The element quality is within the acceptable range of operation.
Quiesced (v1.2+)	The element is enabled but only processes a restricted set of commands.
StandbyOffline	This function or resource is enabled but awaits an external action to activate it.
StandbySpare	This function or resource is part of a redundancy set and awaits a failover or other external action to activate it.
Starting	This function or resource is starting.
UnavailableOffline (v1.1+)	This function or resource is present but cannot be used.
Updating (v1.2+)	The element is updating and might be unavailable or degraded.

Table 49: State property values

9.4 Swordfish Schema Types

9.4.1 CapacitySource 1.2.0

9.4.1.1 Description This composition may be used to represent the source and type of storage capacity. At most one of the ProvidingDrives, ProvidingVolumes, ProvidingMemoryChunks, ProvidingMemory or ProvidingPools properties may have a value. If any of ProvidingDrives, ProvidingVolumes, ProvidingMemory or Providing-Pools reference more than one resource, allocation of capacity across those resources is implementation dependent.

9.4.1.2 URIS /redfish/v1/Storage/{*Storageld*}/FileSystems/{*FileSystemId*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/Storage/{*StoragePools*/ {*StoragePoolId*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/Storage/{*StorageServiceld*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageServices/{*StorageServiceld*}/FileSystems/{*FileSystemId*}/CapacitySources/ {*CapacitySourceld*} /redfish/v1/StorageServices/{*StorageServiceld*}/StoragePools/ {*StoragePoolId*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageServiceld}/Volumes/{*Volumeld*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageServiceld}/Volumes/{*Volumeld*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageServiceld}/Volumes/{*Volumeld*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageServiceld}/Volumes/{*Volumeld*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/ StorageId}/StoragePools/{*StoragePoolId*}/CapacitySources/{*CapacitySourceld*} /redfish/v1/Systems/{*ComputerSystemId*}/Storage/{*StorageId*}/Volumes/{*Volumeld*}/ CapacitySources/{*CapacitySourceld*} /redfish/v1/Systems/{*ComputerSystemId*}/Storage/{*StorageId*}/Volumes/{*Volumeld*}/ CapacitySources/{*CapacitySourceld*}

9.4.1.3 Properties The properties defined for the CapacitySource 1.2.0 schema are summarized in Table 50.

Property	Туре	Attributes	Notes
Actions (v1.1.2+) {}	object		The Actions property shall contain the available actions for this resource.

Table 50: CapacitySource 1.2.0 properties

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identified for this resource. The value shall conform with the 'Id' clause o the Redfish Specification.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All value for properties that this object contains shall conform to the Redfish Specification described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
ProvidedCapacity {}	object		The value shall be the amount of space that has been provided from the ProvidingDrives, ProvidingVolumes, ProvidingMemory or ProvidingPools. For property details, see Capacity.
ProvidedClassOfService	object		The value shall reference the provided ClassOfService from the ProvidingDrives, ProvidingVolumes, ProvidingMemo- ryChunks, ProvidingMemory or ProvidingPools. See the <i>ClassOfService</i> schema for details on this property.
@odata.id	string	read-only	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
} ProvidingDrives {	object		If present, the value shall be a reference to a contributing drive or drives.

Property	Туре	Attributes	Notes
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
ProvidingMemory (v1.1+) {	object		If present, the value shall be a reference to the contributing memory.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}			
ProvidingMemoryChur (v1.1+) {	nks object		If present, the value shall be a reference to the contributing memory chunks.
<pre>@odata.id }</pre>	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

Property	Туре	Attributes	Notes
ProvidingPools {	object		If present, the value shall be a reference to a contributing storage pool or storage pools Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StoragePool</i> . See the StoragePool schema for details.
ProvidingVolumes {	object		If present, the value shall be a reference to a contributing volume or volumes. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>Volume</i> . See the Volume schema for details.

9.4.2 CapacitySourceCollection

9.4.2.1 URIs /redfish/v1/Storage/{StorageId}/FileSystems/{FileSystemId}/CapacitySources /redfish/v1/Storage/{StorageId}/StoragePools/{StoragePoolId}/ CapacitySources /redfish/v1/StorageServices/{StorageServiceId}/FileSystems/{FileSystemId}/ CapacitySources /redfish/v1/StorageServices/{StorageServiceId}/FileSystems/{FileSystemId}/ CapacitySources /redfish/v1/StorageServices/{StorageServiceId}/StoragePools/ {StoragePoolId}/CapacitySources /redfish/v1/StorageServices/{StorageServiceId}/ Volumes/{VolumeId}/CapacitySources /redfish/v1/Systems/{ComputerSystemId}/ Storage/{StorageId}/FileSystems/{FileSystemId}/CapacitySources /redfish/v1/ Storage/{StorageId}/FileSystems/{FileSystemId}/StoragePools/ {StoragePoolId}/CapacitySources /redfish/v1/Systems/{ComputerSystemId}/ CapacitySources /redfish/v1/Systems/{StoragePoolSystemId}/ CapacitySources /redfish/v1/Systems/{StoragePoolSystemId}/ CapacitySources /redfish/v1/Systems/{ComputerSystemId}/ Volumes/{VolumeId}/CapacitySources

9.4.2.2 Properties The properties defined for the CapacitySourceCollection schema are summarized in Table 51.

Table 51	CapacitySourceCollection properties	
----------	-------------------------------------	--

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a CapacitySource resource.
@odata.id	string	read-only	Link to a CapacitySource resource. See the Links section and the <i>CapacitySource</i> schema for details.
}]			
Members@odata.ne	(URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.

Property	Туре	Attributes	Notes
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.3 ClassOfService 1.2.0

9.4.3.1 Description This resource shall define a service option composed of one or more line of service entities. ITIL defines a service option as a choice of utility or warranty for a service.

9.4.3.2 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*} /redfish/v1/StorageServices/{*StorageServiceld*}/StoragePools/ {*StoragePoolId*}/ClassesOfService/{*ClassOfServiceld*}

9.4.3.3 Properties The properties defined for the ClassOfService 1.2.0 schema are summarized in Table 52.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
ClassOfServiceVersion	string	read-write (null)	The version describing the creation or last modification of this service option specification. The string representing the version shall be in the form: M + '.' + N + '.' + U Where: M - The major version (in numeric form). N - The minor version (in numeric form). U - The update (e.g. errata or patch in numeric form).
DataProtection LinesOfService (v1.1.1+) [{	array		The value shall be a se of data protection service options. Withir a class of service, one data protection service option shall be presen for each replication session.
@odata.id	string	read-write	Link to a DataProtec- tionLineOfService resource. See the Link section and the <i>DataProtectionLineOf-</i> <i>Service</i> schema for details.

Table 52: ClassOfService 1.2.0 properties

Property	Туре	Attributes	Notes
}]			
DataSecurityLinesOf (v1.1.1+) [{	Service rray		The value shall be a set of data security service options.
@odata.id	string	read-write	Link to a DataSecurity- LineOfService resource See the Links section and the <i>DataSecurityLi- neOfService</i> schema for details.
}]			
DataStorageLinesOf (v1.1.1+) [{	Servicearray		The value shall be a set of data protection service options.
@odata.id	string	read-write	Link to a DataStorageLi neOfService resource. See the Links section and the <i>DataStorageLi- neOfService</i> schema for details.
}]			
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).
IOConnectivityLinesC (v1.1.1+) [{	D fServiœ ray		The value shall be a se of IO connectivity service options. Within a class of service, at most one IO connectivity service option may be present for a value of AccessProtocol.
@odata.id	string	read-write	Link to a IOConnectiv- ityLineOfService resource. See the Links section and the <i>IOCon-</i> <i>nectivityLineOfService</i> schema for details.
<pre>}] IOPerformanceLines((v1.1.1+) [{</pre>	DfServiceay		The value shall be a se of IO performance

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a IOPerfor- manceLineOfService resource. See the Links section and the <i>IOPer-</i> <i>formanceLineOfService</i> schema for details.
}]			
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.4 ClassOfServiceCollection

9.4.4.1 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/ClassesOfService /redfish/v1/StorageServices/{*StorageServiceId*}/StoragePools/{*StoragePoolId*}/ ClassesOfService

9.4.4.2 Properties The properties defined for the ClassOfServiceCollection schema are summarized in Table 53.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a ClassOfService or LineOfService resource.
@odata.id	string	read-only	Link to a LineOfService resource. See the Links section and th <i>LineOfService</i> schem for details.
Members@odata.ne	xtLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.

Table 53: ClassOfServiceCollection properties

Property	Туре	Attributes	Notes
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All value for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.5 ConsistencyGroup 1.0.1

9.4.5.1 Description A collection of volumes grouped together to ensure write order consistency across all those volumes. A management operation on a consistency group, such as configuring replication properties, applies to all the volumes within the consistency group.

9.4.5.2 URIs /redfish/v1/Storage/{*StorageId*}/ConsistencyGroups/{*ConsistencyGroupId*} /redfish/v1/StorageServices/{*StorageServiceId*}/ConsistencyGroups/ {*ConsistencyGroupId*} /redfish/v1/StorageServices/{*StorageServiceId*}/Volumes/ {*VolumeId*}/ConsistencyGroups/{*ConsistencyGroupId*} /redfish/v1/Systems/{*ComputerSystemId*}/Storage/{*StorageId*}/ConsistencyGroups/{*ConsistencyGroupId*} **9.4.5.3 Properties** The properties defined for the ConsistencyGroup 1.0.1 schema are summarized in Table 54.

Property	Туре	Attributes	Notes
Actions {	object		The Actions property shall contain the available actions for this resource.
<pre>#Consistency- Group.AssignReplicaTarget {}</pre>	object		This action shall be used to establish a replication relationship by assigning an existing consistency group to serve as a target replica for an existing source consistency group. For more information, see the Actions section below.

Table 54:	Consistency	Group	1.0.1	properties

Swordfish Scalable	Storage Managemei	nt API Specification
Sworumshi Sculubic	Storage managemen	it / i i Speemeution

Property	Туре	Attributes	Notes
}			
ConsistencyMethod	string (enum)	read-write(null)	The property shall set the consistency method used by this group. For the possible property values, see Consisten- cyMethod in Property details.
ConsistencyType	string (enum)	read-write(null)	This property shall set the consistency type used by this group. Fo the possible property values, see Consistency- Type in Property details.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
IsConsistent	boolean	read-only (null)	The value of this property shall be set to true when the consistency group is in a consistent state.
Links {	object		This property shall contain links to other resources tha are related to this resource.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. Al values for properties contained in this object shall conform to the Redfish Specification- described requirements For property details, see Oem.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. Al values for properties that this object contains shall conform to the Redfish Specification- described requirements For property details, see Oem.
ReplicaInfo {}	object		This property shall describe the replication relationship between this storage group and a corre- sponding source storage group For property details, see ReplicaInfo v1.3.0).

Property	Туре	Attributes	Notes
ReplicaTargets [{	array		The value shall reference the target replicas that are sourced by this replica.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
Status {}	object		The property shall contain the status of the Consisten- cyGroup. For property details, see Status.
Volumes [{	array		An array of references to volumes managed by this storage group.

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a Volume resource. See the Links section and the <i>Volume</i> schema for details.
}]			

9.4.5.4 Actions

9.4.5.4.1 AssignReplicaTarget Description

This action shall be used to establish a replication relationship by assigning an existing consistency group to serve as a target replica for an existing source consistency group.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.AssignReplicaTarget

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 55.

Table 55: AssignReplica	Target action parameters
-------------------------	--------------------------

Parameter Name	Туре	Attributes	Notes
ReplicaType	string (enum)	required	This parameter shall contain the type of replica relationship to be created. For the possible property values, see ReplicaType in Property details.

Parameter Name	Туре	Attributes	Notes
ReplicaUpdateMode	string (enum)	required	This parameter shall specify the replica update mode. <i>For the</i> <i>possible property</i> <i>values, see Repli-</i> <i>caUpdateMode in</i> <i>Property details.</i>
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing consistency group.

9.4.5.4.2 CreateReplicaTarget Description

This action shall be used to create a new consistency group resource to provide expanded data protection through a replica relationship with the specified source consistency group.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.CreateReplicaTarget

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 56.

Table 56: CreateReplicaTarget action parameters

Parameter Name	Туре	Attributes	Notes
ConsistencyGroupName	string	required	This parameter shall contain the Name for the target consistency group.

Parameter Name	Туре	Attributes	Notes
ReplicaType	string (enum)	required	This parameter shall contain the type of replica relationship to be created. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReplicaType in</i> <i>Property details.</i>
ReplicaUpdateMode	string (enum)	required	This parameter shall specify the replica update mode. <i>For the</i> <i>possible property</i> <i>values, see Repli-</i> <i>caUpdateMode in</i> <i>Property details.</i>
TargetStoragePool	string	required	This parameter shall contain the Uri to the existing StoragePool in which to create the target consistency group.

9.4.5.4.3 RemoveReplicaRelationship Description

This action shall be used to disable data synchronization between a source and target consistency group, remove the replication relationship, and optionally delete the target consistency group.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.RemoveReplicaRelationship

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 57.

Parameter Name	Туре	Attributes	Notes
DeleteTargetConsistency- Group	boolean	optional	This parameter shall indicate whether or not to delete the target consistency group as part of the operation. If not specified, the system should use its default behavior.
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing target consistency group.

Table 57: RemoveReplicaRelationship action parameters

9.4.5.4.4 ResumeReplication Description

This action shall be used to resume the active data synchronization between a source and target consistency group, without otherwise altering the replication relationship.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.ResumeReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 58.

Table 58: ResumeReplication action parameters

Parameter Name	Туре	Attributes	Notes
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing target consistency group.

9.4.5.4.5 ReverseReplicationRelationship Description

This action shall be used to reverse the replication relationship between a source and target consistency group.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.ReverseReplicationRelationship

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 59.

Table 59: ReverseReplicationRelationship action parameters

Parameter Name	Туре	Attributes	Notes
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing target consistency group.

9.4.5.4.6 SplitReplication Description

This action shall be used to split the replication relationship and suspend data synchronization between a source and target consistency group.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.SplitReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 60.

Parameter Name	Туре	Attributes	Notes
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing target consistency group.

Table 60: SplitReplication action parameters

9.4.5.4.7 SuspendReplication Description

This action shall be used to suspend active data synchronization between a source and target consistency group, without otherwise altering the replication relationship.

Action URI: {Base URI of target resource}/Actions/ConsistencyGroup.SuspendReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 61.

 Table 61: SuspendReplication action parameters

Parameter Name	Туре	Attributes	Notes
TargetConsistencyGroup	string	required	This parameter shall contain the Uri to the existing target consistency group.

9.4.5.5 Property details

9.4.5.5.1 ConsistencyMethod: The defined property values are listed in Table 62. The property shall set the consistency method used by this group.

string	Description
HotStandby	Supports consistency method commonly orchestrated using application-specific code.
Other	Supports consistency method orchestrated using vendor-specific code.
VASA	Supports VMware consistency requirements, such as for VASA and VVOLs.
VDI	Supports Microsoft virtual backup device interface (VDI).
VSS	Supports Microsoft VSS.

Table 62: ConsistencyMethod property values ##### ConsistencyType:

The defined property values are listed in Table 63. This property shall set the consistency type used by this group.

Table 63: ConsistencyType property values ##### ReplicaType:

string	Description
ApplicationConsistent	Orchestration exists to either flush or halt pending IO to ensure operations occur in a transactionally consistent manner.
CrashConsistent	Requested operations are either triggered or instituted without regard to pending IO.

The defined property values are listed in Table 64. This parameter shall contain the type of replica relationship to be created.

Table 64: ReplicaType property values ##### ReplicaUpdateMode:

string	Description
Clone	This enumeration literal shall indicate that replication shall create a point in time, full copy the source.

string	Description
Mirror	This enumeration literal shall indicate that replication shall create and maintain a copy of the source.
Snapshot	This enumeration literal shall indicate that replication shall create a point in time, virtual copy of the source.
TokenizedClone	This enumeration literal shall indicate that replication shall create a token based clone.

The defined property values are listed in Table 65. This parameter shall specify the replica update mode.

 Table 65:
 ReplicaUpdateMode property values

string	Description
Active	This enumeration literal shall indicate Active-Active (i.e. bidirectional) synchronous updates.
Adaptive	This enumeration literal shall indicate that an implementation may switch between synchronous and asynchronous modes.
Asynchronous	This enumeration literal shall indicate Asynchronous updates.
Synchronous	This enumeration literal shall indicate Synchronous updates.

9.4.6 ConsistencyGroupCollection

9.4.6.1 URIs /redfish/v1/Storage/{*StorageId*}/ConsistencyGroups /redfish/v1/StorageServices/{*StorageServiceId*}/ConsistencyGroups /redfish/v1/StorageServices/{*StorageServiceId*}/Volumes/{*VolumeId*}/ConsistencyGroups /redfish/v1/Systems/{*ComputerSystemId*}/Storage/{*StorageId*}/ConsistencyGroups

9.4.6.2 Properties The properties defined for the ConsistencyGroupCollection schema are summarized in Table 66.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a ConsistencyGroup resource.
@odata.id	string	read-only	Link to a ConsistencyGroup resource. See the Links section and the <i>ConsistencyGroup</i> schema for details.
}] Members@odata.ne	(URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.

Table 66: ConsistencyGroupCollection properties

Property	Туре	Attributes	Notes
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.7 DataProtectionLineOfService 1.3.0

9.4.7.1 Description This service option describes a replica that protects data from loss. The requirements must be met collectively by the communication path and the replica.

9.4.7.2 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*}/DataProtectionLinesOfService/{*DataProtectionLineOfServiceld*} / redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService/DataProtectionLinesOfService/{*DataProtectionLineOfServiceld*}

9.4.7.3 Properties The properties defined for the DataProtectionLineOfService 1.3.0 schema are summarized in Table 67.

Property	Туре	Attributes	Notes
Actions (v1.2+) {	object		The Actions property shall contain the available actions for this resource
#DataProtectionLineOfSer- vice.CreateReplicas {}	object		This action shall create an on-demand replica that conforms to the bound DataProtection- LineOfService. <i>For more</i> <i>information, see</i> <i>the Actions</i> <i>section below.</i>
}			
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

Table 67: DataProtectionLineOfService 1.3.0 properties

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
IsIsolated	boolean	read-write (null)	True shall indicate that the replica is in a separate fault domain from its source. The default value of this property is false.
MinLifetime	string	read-write (null)	The value shall be an ISO 8601 duration that specifies the minimum required lifetime of the replica. Note: The maximum number of replicas can be determined using this value together with the replicaSchedule

Swordfish Scalable	Storage Managemen	t API Specification
Sworansin Scalable	Storuge managemen	iera i opeenieution

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem

Property	Туре	Attributes	Notes
RecoveryGeographicObjective	string (enum)	read-write(null)	The value specifies the geographic scope of the failure domain. For the possible property values, see RecoveryGeo- graphicObjective in Property details.
RecoveryPointObjectiveTime	string	read-write (null)	The value shall be an ISO 8601 duration that specifies the maximum time over which source data may be lost on failure In the case that IsIsolated = faise failure of the domain is not a consideration.

Property	Туре	Attributes	Notes
RecoveryTimeObjective	string (enum)	read-write(null)	The value shall be an enumeration that indicates the maximum time required to access an alternate replica In the case that IsIsolated = false failure of the domain is not a consideration. For the possible property values, see Recovery- TimeObjective in Property details.
ReplicaAccessLocation {}	object		This value shall be used if the data access location of the replica is required to be a a specific location. Note 1 The location value may be granular. Note 2 A value may be required for some regulatory compliance. For property details see Location v1.3.0).

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
ReplicaClassOfService {	object		The value shall reference the class of service that defines the required service levels of the replica. See the <i>ClassOfService</i> schema for details on this property.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
ReplicaType	string (enum)	read-write(null)	The type of replica shall conform to this value. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReplicaType in</i> <i>Property details.</i>

Property	Туре	Attributes	Notes
Schedule {}	object		If a replica is made periodically, the value shall define the schedule. For property details, see Schedule v1.2.2).

9.4.7.4 Actions

9.4.7.4.1 CreateReplicas Description

This action shall create an on-demand replica that conforms to the bound DataProtectionLineOfService.

Action URI: {Base URI of target resource}/Actions/DataProtectionLineOfService.CreateReplicas

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 68.

Parameter Name	Туре	Attributes	Notes
ReplicaLineOfService	object	required	The value shall reference the data protection line of service this operation is bound to.
@odata.id	string	read-only	Link to another DataProtectionLineOf Service resource.

 Table 68: CreateReplicas action parameters

Parameter Name	Туре	Attributes	Notes
ReplicaRequests [{	array	optional	Each value shall reference a source resource and provide a name for the replica.
ReplicaName (v1.1+)	string	read-write (null)	The value shall be the names of the replica.
ReplicaSource (v1.1+) {	object		The value shall reference a resource to be replicated.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}			
}]			

9.4.7.5 Property details

9.4.7.5.1 RecoveryGeographicObjective: The defined property values are listed in Table 69. The value specifies the geographic scope of the failure domain.

Table 69: RecoveryGeographicObjective property values #####RecoveryTimeObjective:

string	Description
Datacenter	A facility that provides communication, power, or cooling infrastructure to a co-located set of servers, networking and storage.
Rack	A container within a datacenter that provides communication, power, or cooling to a set of components.

string	Description
RackGroup	A set of racks that may share common communication, power, or cooling.
Region	A set of resources that are required to be either geographically or politically isolated from resources not in the resources.
Row	A set of adjacent racks or rackgroups that may share common communication, power, or cooling.
Server	Components of a CPU/memory complex that share the same infrastructure.

The defined property values are listed in Table 70. The value shall be an enumeration that indicates the maximum time required to access an alternate replica. In the case that IsIsolated = false, failure of the domain is not a consideration.

Table 70: RecoveryTimeObjective property values ##### ReplicaType:

string	Description
Nearline	Access to a replica shall be consistent with switching access to a different path through a different front-end interconnection infrastructure. Some inconsistency may occur. A restore step may be required before recovery can commence.
Offline	Access to a replica may take a significant amount of time. No direct connection to the replica is assumed. Some inconsistency loss may occur. A restore step is likely to be required.
OnlineActive	Access to synchronous replicas shall be instantaneous.
OnlinePassive	Access to a synchronous replica shall be consistent with switching access to a different path the same front-end interconnect. A restore step shall not be required.

The defined property values are listed in Table 71. The type of replica shall conform to this value.

string	Description
Clone	This enumeration literal shall indicate that replication shall create a point in time, full copy the source.
Mirror	This enumeration literal shall indicate that replication shall create and maintain a copy of the source.
Snapshot	This enumeration literal shall indicate that replication shall create a point in time, virtual copy of the source.
TokenizedClone	This enumeration literal shall indicate that replication shall create a token based clone.

Table 71: ReplicaType property values

9.4.8 DataProtectionLoSCapabilities 1.2.0

9.4.8.1 Description The capabilities to protect data from loss by the use of a replica. The requirements shall be met collectively by the communication path and the replica. There should be one instance associated to a class of service for each replica. Each replica independently should have a class of service that describes its characteristics.

9.4.8.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/DataProtection-LoSCapabilities

9.4.8.3 Properties The properties defined for the DataProtectionLoSCapabilities 1.2.0 schema are summarized in Table 72.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.

Table 72: DataProtectionLoSCapabilities 1.2.0 properties

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).
Links {	object		The value of this property shall contains links to other resources that are not contained in this resource.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.
SupportedRepli- caOptions [{	array		The collection shall contain known and supported replica Classes of Service.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
} Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.
SupportedLinesOfService	array		The collection shall contain known and supported DataProtectionLinesOfServ
@odata.id	string	read-write	Link to a DataProtec- tionLineOfService resource. See the Links section and the <i>DataProtectionLineOf-</i> <i>Service</i> schema for details.
<pre>}] SupportedMinLifetimes []</pre>	array (string, null)	read-write	The value of each entry shall be an ISO 8601 duration that specifies the minimum lifetime required for the replica.

Property	Type Attributes	Notes
SupportedRecov []	eryGeographigObjectiv/es/rite(null) (string (enum))	The value of each entry shall specify a supported failure domain. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>SupportedRecovery-</i> <i>GeographicObjectives</i> <i>in Property details.</i>
SupportedRecov	The value of each entry shall specify a supported ISO 8601 time interval defining the maximum source information that may be lost on failure. In the case that IsIsolate = false, failure of the domain is not a consideration.	
SupportedRecove	eryTimeObjectives read-write(null) (string (enum))	The value of each entry shall specify an enumerated value that indicates a supported expectation for the time required to access an alternate replica. In the case that IsIsolated = false failure of the domain not a consideration. For the possible property values, see SupportedRecovery- TimeObjectives in Property details.

Property	Туре	Attributes	Notes
SupportedReplicaTypes []	array (string (enum))	read-write(null)	The value of each entry shall specify a supported replica type For the possible property values, see SupportedRepli- caTypes in Property details.
SupportsIsolated	boolean	read-write (null)	A value of true shall indicate that allocating a replica in separate fault domain is supported. The default value for this property is false.

9.4.8.4 Property details

9.4.8.4.1 SupportedRecoveryGeographicObjectives: The defined property values are listed in Table 73. The value of each entry shall specify a supported failure domain.

Table 73: SupportedRecoveryGeographicObjectives property values #####SupportedRecoveryTimeObjectives:

string	Description
Datacenter	A facility that provides communication, power, or cooling infrastructure to a co-located set of servers, networking and storage.
Rack	A container within a datacenter that provides communication, power, or cooling to a set of components.
RackGroup	A set of racks that may share common communication, power, or cooling.

string	Description
Region	A set of resources that are required to be either geographically or politically isolated from resources not in the resources.
Row	A set of adjacent racks or rackgroups that may share common communication, power, or cooling.
Server	Components of a CPU/memory complex that share the same infrastructure.

The defined property values are listed in Table 74. The value of each entry shall specify an enumerated value that indicates a supported expectation for the time required to access an alternate replica. In the case that IsIsolated = false, failure of the domain is not a consideration.

Table 74: SupportedRecoveryTimeObjectives property values #####SupportedReplicaTypes:

string	Description		
Nearline	Access to a replica shall be consistent with switching access to a different path through a different front-end interconnection infrastructure. Some inconsistency may occur. A restore step may be required before recovery can commence.		
Offline	Access to a replica may take a significant amount of time. No direct connection to the replica is assumed. Some inconsistency loss may occur. A restore step is likely to be required.		
OnlineActive	Access to synchronous replicas shall be instantaneous.		
OnlinePassive	Access to a synchronous replica shall be consistent with switching access to a different path the same front-end interconnect. A restore step shall not be required.		

The defined property values are listed in Table 75. The value of each entry shall specify a supported replica type.

string	Description
Clone	This enumeration literal shall indicate that replication shall create a point in time, full copy the source.
Mirror	This enumeration literal shall indicate that replication shall create and maintain a copy of the source.
Snapshot	This enumeration literal shall indicate that replication shall create a point in time, virtual copy of the source.
TokenizedClone	This enumeration literal shall indicate that replication shall create a token based clone.

Table 75: Supported Replica Types property values

9.4.9 DataSecurityLineOfService 1.1.1

9.4.9.1 Description This structure shall be used to describe data security service level requirements.

9.4.9.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/ClassesOfService/ {*ClassOfServiceId*}/DataSecurityLinesOfService/{*DataSecurityLineOfServiceId*}/redfish/ v1/StorageServices/{*StorageServiceId*}/LinesOfService/DataSecurityLinesOfService/ {*DataSecurityLineOfServiceId*}

9.4.9.3 Properties The properties defined for the DataSecurityLineOfService 1.1.1 schema are summarized in Table 76.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.

Table 76: DataSecurityLineOfService 1.1.1 properties

Property	Туре	Attributes	Notes
AntivirusEngineProvide	er tring	read-write (null)	The value shall specify an AntiVirus provider.
AntivirusScanPolicies []	array (string (enum))	read-write(null)	The enumeration literal shall specify the policy for triggering an AntiVirus scan. For the possible property values, see AntivirusScanPoli- cies in Property details.
ChannelEncryptionStre	e sigtin g (enum)	read-write(null)	The enumeration literal shall specify a key size in a symmetric encryption algorithm for transport channel encryption. For the possible property values, see ChannelEncryp- tionStrength in Property details.
DataSanitizationPolicy	string (enum)	read-write(null)	The enumeration literal shall specify the data sanitization policy. For the possible property values, see DataSanitization- Policy in Property details.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
HostAuthentication	īype tring (enum)	read-write(null)	The enumeration literal shall specify the authentication type for hosts (servers) or initiator endpoints. <i>For the</i> <i>possible property</i> <i>values, see HostAu-</i> <i>thenticationType in</i> <i>Property details.</i>
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
MediaEncryptio	o nStrengtih ing (enum)	read-write(null)	The enumeration literal shall specify a key size in a symmetric encryption algorithm for media encryption. For the possible property values, see MediaEncryption- Strength in Property details.
Name	string	read-only required	This property shal contain the name of this resource or array member. The value shall conforr with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shal contain the OEM extensions. All values for properties that thi object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

Swordfish Scalable Storage Management API Specificatio	'n
--	----

Duranta	T	A 44 - 24 - 2	Nata
Property	Туре	Attributes	Notes
SecureChannelProtocols (string (enum)	read-write(null)	The enumeration literal shall specify the protocol that provide encrypted communication. <i>For the possible</i> <i>property values, see</i> <i>SecureChannelPro-</i> <i>tocol in Property</i> <i>details.</i>
UserAuthenticationType (e tring (enum)	read-write(null)	The enumeration literal shall specify the authentication type for users (or programs). For the possible property values, see User- AuthenticationType in Property details.

9.4.9.4 Property details

9.4.9.4.1 AntivirusScanPolicies: The defined property values are listed in Table 77. The enumeration literal shall specify the policy for triggering an AntiVirus scan.

Table 77: AntivirusScanPolicies propert	y values ##### Channe	elEncryptionStrength:
---	-----------------------	-----------------------

string	Description
None	This enumeration literal specifies No trigger.
OnFirstRead	This enumeration literal specifies to trigger on first read.
OnPatternUpdate	This enumeration literal specifies to trigger on antivirus pattern file update.

string	Description
OnRename	This enumeration literal specifies to trigger on object rename.
OnUpdate	This enumeration literal specifies to trigger on object update.

The defined property values are listed in Table 78. The enumeration literal shall specify a key size in a symmetric encryption algorithm for transport channel encryption.

Table 78: ChannelEncryptionStrength property values ##### DataSanitizationPolicy:

string	Description
Bits_0	This enumeration literal specifies that there is no key.
Bits_112	This enumeration literal specifies a 3DES 112 bit key.
Bits_128	This enumeration literal specifies an AES 128 bit key.
Bits_192	This enumeration literal specifies an AES 192 bit key.
Bits_256	This enumeration literal specifies an AES 256 bit key.

The defined property values are listed in Table 79. The enumeration literal shall specify the data sanitization policy.

Table 79: DataSanitizationPolicy property values ##### HostAuthenticationType:

string	Description
Clear	This enumeration literal specifies to sanitize data in all user-addressable storage locations for protection against simple non-invasive data recovery techniques.
CryptographicErase	This enumeration literal specifies to leverages the encryption of target data by enabling sanitization of the target data's encryption key. This leaves only the ciphertext remaining on the media, effectively sanitizing the data by preventing read-access. For more information, see NIST800-88 and ISO/IEC 27040.

string	Description
None	This enumeration literal specifies no sanitization.

The defined property values are listed in Table 80. The enumeration literal shall specify the authentication type for hosts (servers) or initiator endpoints.

Table 80: HostAuthenticationType property values ##### MediaEncryptionStrength:

string	Description		
None	This enumeration literal specifies No authentication.		
Password	This enumeration literal specifies Password/shared-secret: Absent an distributed authentication infrastructure, this is what is typically done.		
РКІ	This enumeration literal specifies a Public Key Infrastructure. Customers with the highest assurance requirements roll PKI out to hosts and users (it is more common for hosts than users. User PKI-based authentication has significant operational complications and administrative overheads, e.g., smart cards may be involved.		
Ticket	This enumeration literal specifies Ticket-based (e.g., Kerberos): This is the most common class of authentication infrastructure used in enterprises. Kerberos is the best known example, and Windows usage of that via Active Directory is so widely deployed as to be a de facto standard. In other areas (e.g., academia) there are comparable ticket-based systems.		

The defined property values are listed in Table 81. The enumeration literal shall specify a key size in a symmetric encryption algorithm for media encryption.

Table 81: MediaEncryptionStrength property values ##### SecureChannelProtocol:

string	Description
Bits_0	This enumeration literal specifies that there is no key.
Bits_112	This enumeration literal specifies a 3DES 112 bit key.
Bits_128	This enumeration literal specifies an AES 128 bit key.
Bits_192	This enumeration literal specifies an AES 192 bit key.
Bits_256	This enumeration literal specifies an AES 256 bit key.

The defined property values are listed in Table 82. The enumeration literal shall specify the protocol that provide encrypted communication.

string	Description
IPsec	This enumeration literal specifies Internet Protocol Security (IPsec), as defined by IETF RFC 2401.
None	This enumeration literal specifies no encryption.
RPCSEC_GSS	This enumeration literal specifies RPC access to the Generic Security Services Application Programming Interface (GSS-API), as defined by IETF RPC 2203.
TLS	This enumeration literal specifies Transport Layer Security (TLS), as defined by IETF RFC 5246.

 Table 82:
 SecureChannelProtocol property values ##### UserAuthenticationType:

The defined property values are listed in Table 83. The enumeration literal shall specify the authentication type for users (or programs).

 Table 83: UserAuthenticationType property values

string	Description
None	This enumeration literal specifies No authentication.

string	Description
Password	This enumeration literal specifies Password/shared-secret: Absent an distributed authentication infrastructure, this is what is typically done.
РКІ	This enumeration literal specifies a Public Key Infrastructure. Customers with the highest assurance requirements roll PKI out to hosts and users (it is more common for hosts than users. User PKI-based authentication has significant operational complications and administrative overheads, e.g., smart cards may be involved.
Ticket	This enumeration literal specifies Ticket-based (e.g., Kerberos): This is the most common class of authentication infrastructure used in enterprises. Kerberos is the best known example, and Windows usage of that via Active Directory is so widely deployed as to be a de facto standard. In other areas (e.g., academia) there are comparable ticket-based systems.

9.4.10 DataSecurityLoSCapabilities 1.2.0

9.4.10.1 Description This resource may be used to describe data security capabilities.

9.4.10.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/DataSecurity-LoSCapabilities

9.4.10.3 Properties The properties defined for the DataSecurityLoSCapabilities 1.2.0 schema are summarized in Table 84.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value identifies this resource. The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name clause of the Redfish Specification.

Table 84: DataSecurityLoSCapabilities 1.2.0 properties

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.
SupportedAntivirus EngineProviders []	array (string, null)	read-write	The entry values shall specify supported AntiVirus providers.
SupportedAntivirus ScanPolicies []	array (string (enum))	read-write(null)	The enumeration literal shall specify supported policies that trigger an AntiVirus scan. For the possible property values, see SupportedAntivirusS- canPolicies in Property details.
SupportedChannel Encryption- Strengths []	array (string (enum))	read-write(null)	The enumeration literal shall specify supported key sizes in a symmetric encryption algorithm (AES) for transport channel encryption. For the possible property values, see SupportedChannelEn- cryptionStrengths in Property details.

Property	Type Att	tributes	Notes
SupportedDataSa Policies []	a nitizatio ,n red (string (enum))	ad-write(null)	The enumeration literal shall specify supported data sanitization policies. <i>For the possible</i> <i>property values, see</i> <i>SupportedDataSanitiza-</i> <i>tionPolicies in Property</i> <i>details.</i>
SupportedHostAu Types []	Ithentication red (string (enum))	ad-write(null)	The enumeration literal shall specify supported authentication types for hosts (servers) or initiator endpoints. For the possible property values, see SupportedHostAuthenti- cationTypes in Property details.
SupportedLinesO [{	f Service y		The collection shall contain supported DataSecurity service options.
@odata.id	string <i>rec</i>	ad-write	Link to a DataSecurityLineOfService resource. See the Links section and the <i>DataSecurityLineOfService</i> schema for details.

Property	Туре	Attributes	Notes
SupportedMedia Strengths []	Encryption (string (enum))	read-write(null)	The enumeration literal shall specify supported key sizes in a symmetric encryption algorithm (AES) for media encryption. <i>For the</i> <i>possible property values</i> <i>see SupportedMediaEn-</i> <i>cryptionStrengths in</i> <i>Property details.</i>
SupportedSecure Protocols []	e Charamel y (string (enum))	read-write(null)	The enumeration literal shall specify supported protocols that provide encrypted communication. For the possible property values, see SupportedSe- cureChannelProtocols in Property details.
SupportedUserA tionTypes []	uthentiica y (string (enum))	read-write(null)	The enumeration literal shall specify supported authentication types for users (or programs). For the possible property values, see SupportedUserAuthenti- cationTypes in Property details.

9.4.10.4 Property details

9.4.10.4.1 SupportedAntivirusScanPolicies: The defined property values are listed in Table 85. The enumeration literal shall specify supported policies that trigger an AntiVirus scan.

Table 85: SupportedAntivirusScanPolicies property values #####SupportedChannelEncryptionStrengths:

string	Description
None	This enumeration literal specifies No trigger.
OnFirstRead	This enumeration literal specifies to trigger on first read.
OnPatternUpdate	This enumeration literal specifies to trigger on antivirus pattern file update.
OnRename	This enumeration literal specifies to trigger on object rename.
OnUpdate	This enumeration literal specifies to trigger on object update.

The defined property values are listed in Table 86. The enumeration literal shall specify supported key sizes in a symmetric encryption algorithm (AES) for transport channel encryption.

Table 86: SupportedChannelEncryptionStrengths property values #####SupportedDataSanitizationPolicies:

string	Description
Bits_0	This enumeration literal specifies that there is no key.
Bits_112	This enumeration literal specifies a 3DES 112 bit key.
Bits_128	This enumeration literal specifies an AES 128 bit key.
Bits_192	This enumeration literal specifies an AES 192 bit key.
Bits_256	This enumeration literal specifies an AES 256 bit key.

The defined property values are listed in Table 87. The enumeration literal shall specify supported data sanitization policies.

Table 87: SupportedDataSanitizationPolicies property values #####SupportedHostAuthenticationTypes:

string	Description This enumeration literal specifies to sanitize data in all user-addressable storage locations for protection against simple non-invasive data recovery techniques.	
Clear		
CryptographicErase	This enumeration literal specifies to leverages the encryption of target data by enabling sanitization of the target data's encryption key. This leaves only the ciphertext remaining on the media, effectively sanitizing the data by preventing read-access. For more information, see NIST800-88 and ISO/IEC 27040.	
None	This enumeration literal specifies no sanitization.	

The defined property values are listed in Table 88. The enumeration literal shall specify supported authentication types for hosts (servers) or initiator endpoints.

Table 88: SupportedHostAuthenticationTypes property values #####SupportedMediaEncryptionStrengths:

string	Description
None	This enumeration literal specifies No authentication.
Password	This enumeration literal specifies Password/shared-secret: Absent an distributed authentication infrastructure, this is what is typically done.
ΡΚΙ	This enumeration literal specifies a Public Key Infrastructure. Customers with the highest assurance requirements roll PKI out to hosts and users (it is more common for hosts than users. User PKI-based authentication has significant operational complications and administrative overheads, e.g., smart cards may be involved.

string	Description
Ticket	This enumeration literal specifies Ticket-based (e.g., Kerberos): This is the most common class of authentication infrastructure used in enterprises. Kerberos is the best known example, and Windows usage of that via Active Directory is so widely deployed as to be a de facto standard. In other areas (e.g., academia) there are comparable ticket-based systems.

The defined property values are listed in Table 89. The enumeration literal shall specify supported key sizes in a symmetric encryption algorithm (AES) for media encryption.

Table 89: SupportedMediaEncryptionStrengths property values #####SupportedSecureChannelProtocols:

string	Description
Bits_0	This enumeration literal specifies that there is no key.
Bits_112	This enumeration literal specifies a 3DES 112 bit key.
Bits_128	This enumeration literal specifies an AES 128 bit key.
Bits_192	This enumeration literal specifies an AES 192 bit key.
Bits_256	This enumeration literal specifies an AES 256 bit key.

The defined property values are listed in Table 90. The enumeration literal shall specify supported protocols that provide encrypted communication.

Table 90: SupportedSecureChannelProtocols property values #####SupportedUserAuthenticationTypes:

string	Description
IPsec	This enumeration literal specifies Internet Protocol Security (IPsec), as defined by IETF RFC 2401.
None	This enumeration literal specifies no encryption.

string	Description
RPCSEC_GSS	This enumeration literal specifies RPC access to the Generic Security Services Application Programming Interface (GSS-API), as defined by IETF RPC 2203.
TLS	This enumeration literal specifies Transport Layer Security (TLS), as defined by IETF RFC 5246.

The defined property values are listed in Table 91. The enumeration literal shall specify supported authentication types for users (or programs).

string	Description
None	This enumeration literal specifies No authentication.
Password	This enumeration literal specifies Password/shared-secret: Absent an distributed authentication infrastructure, this is what is typically done.
РКІ	This enumeration literal specifies a Public Key Infrastructure. Customers with the highest assurance requirements roll PKI out to hosts and users (it is more common for hosts than users. User PKI-based authentication has significant operational complications and administrative overheads, e.g., smart cards may be involved.
Ticket	This enumeration literal specifies Ticket-based (e.g., Kerberos): This is the most common class of authentication infrastructure used in enterprises. Kerberos is the best known example, and Windows usage of that via Active Directory is so widely deployed as to be a de facto standard. In other areas (e.g., academia) there are comparable ticket-based systems.

9.4.11 DataStorageLineOfService 1.3.1

9.4.11.1 Description This structure may be used to describe a service option covering storage provisioning and availability.

9.4.11.2 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*}/DataStorageLinesOfService/{*DataStorageLineOfServiceld*}/redfish/ v1/StorageServices/{*StorageServiceld*}/LinesOfService/DataStorageLinesOfService/ {*DataStorageLineOfServiceld*}

9.4.11.3 Properties The properties defined for the DataStorageLineOfService 1.3.1 schema are summarized in Table 92.

Property	Туре	Attributes	Notes
AccessCapabilities (v1.1+) []	array (string (enum))	read-write(null)	Each entry specifies a required storage access capability. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>AccessCapabilities in</i> <i>Property details.</i>
Actions (v1.3+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

 Table 92: DataStorageLineOfService 1.3.1 properties

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
IsSpaceEfficient	boolean	read-write (null)	A value of true shall indicate that the storage is compressed or deduplicated. The default value for this property is false.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
ProvisioningPolicy	string (enum)	read-write(null)	The enumeration litera shall define the provisioning policy for storage. For the possible property values, see ProvisioningPolicy in Property details.
RecoverableCapaci SourceCount (v1.2+)	i ty teger	read-write (null)	The value is minimum required number of available capacity source resources that shall be available in the event that an equivalent capacity source resource fails. It is assumed that drives and memory components can be replaced, repaired or otherwise added to increase an associated resource's RecoverableCapacitySo

Property RecoveryTimeObje	Туре	Attributes	Notes
BecoveryTimeOhi			
tives	es tring (enum)	read-write(null)	The enumeration literal specifies the time after a disaster that the client shall regain conformant service level access to the primary store, typical values are 'immediate' or 'offline'. The expectation is that the services required to implement this capability are part of the advertising system. <i>For the possible</i>
			property values, see Re- coveryTimeObjectives ir Property details.

9.4.11.4 Property details

9.4.11.4.1 AccessCapabilities: The defined property values are listed in Table 93. Each entry specifies a required storage access capability.

string	Description
Append	This enumeration literal shall indicate that the storage may be written only to append.
Execute	This value shall indicate that Execute access is allowed by the file share.
Read	This enumeration literal shall indicate that the storage may be read.

Table 93: AccessCapabilities property values ##### ProvisioningPolicy:

string	Description
Streaming	This enumeration literal shall indicate that the storage may be read sequentially.
Write	This enumeration literal shall indicate that the storage may be written multiple times.
WriteOnce	This enumeration literal shall indicate that the storage may be written only once.

The defined property values are listed in Table 94. The enumeration literal shall define the provisioning policy for storage.

string	Description
Fixed	This enumeration literal specifies storage shall be fully allocated.
Thin	This enumeration literal specifies storage may be over allocated.

The defined property values are listed in Table 95. The enumeration literal specifies the time after a disaster that the client shall regain conformant service level access to the primary store, typical values are 'immediate' or 'offline'. The expectation is that the services required to implement this capability are part of the advertising system.

Table 95: RecoveryTimeObjectives property values

string	Description
Nearline	Access to a replica shall be consistent with switching access to a different path through a different front-end interconnection infrastructure. Some inconsistency may occur. A restore step may be required before recovery can commence.

string	Description
Offline	Access to a replica may take a significant amount of time. No direct connection to the replica is assumed. Some inconsistency loss may occur. A restore step is likely to be required.
OnlineActive	Access to synchronous replicas shall be instantaneous.
OnlinePassive	Access to a synchronous replica shall be consistent with switching access to a different path the same front-end interconnect. A restore step shall not be required.

9.4.12 DataStorageLoSCapabilities 1.2.2

9.4.12.1 Description Each instance of DataStorageLoSCapabilities describes capabilities of the system to support various data storage service options.

9.4.12.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/DataStorageLoSCapabilities

9.4.12.3 Properties The properties defined for the DataStorageLoSCapabilities 1.2.2 schema are summarized in Table 96.

 Table 96: DataStorageLoSCapabilities 1.2.2 properties

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property
			shall contain the
			available actions for
			this resource.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).
MaximumRecover CapacitySource- Count (v1.2+)	r able integer	read-write (null)	The maximum number of capacity source resources that can be supported for the purpose of recovery when in the event that an equivalent capacity source resource fails.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.

Due a suto i	T	A + + + = + + + + + + +	Natas
Property	Туре	Attributes	Notes
0em {}	object		This property shall
			contain the OEM
			extensions. All values
			for properties that this
			object contains shall
			conform to the Redfish
			Specification-
			described
			requirements. For
			property details, see
			Oem.
SupportedAccess	array	read-write(null)	Each entry specifies a
Capabilities []	(string		storage access
	(enum))		capability. For the
			possible property
			values, see Support-
			edAccessCapabilities in
			Property details.
SupportedLinesOfS	ervicey		The collection shall
[{			contain known and
			supported
			DataStorageLinesOfService
@odata.id	string	read-write	Link to a DataStorage-
			LineOfService
			resource. See the Links
			section and the DataS-
			torageLineOfService
			schema for details.
}]			

}]

Property	Туре	Attributes	Notes
SupportedProvision ingPolicies []	array (string (enum))	read-write(null)	This collection specifies supported storage allocation policies. <i>For the</i> <i>possible property</i> <i>values, see Supported-</i> <i>ProvisioningPolicies in</i> <i>Property details.</i>
SupportedRecovery TimeObjectives []	array (string (enum))	read-write(null)	 This collection specifies supported expectations for time to access the primary store after recovery. For the possible property values, see SupportedRecovery- TimeObjectives in Property details.
SupportsSpaceEfficie	enbcy olean	read-write (null)	The value specifies whether storage compression or deduplication is supported. The default value for this property is false.

9.4.12.4 Property details

9.4.12.4.1 SupportedAccessCapabilities: The defined property values are listed in Table 97. Each entry specifies a storage access capability.

Table 97: SupportedAccessCapabilities property values #####	
SupportedProvisioningPolicies:	

string	Description
Append	This enumeration literal shall indicate that the storage may be written only to append.
Execute	This value shall indicate that Execute access is allowed by the file share.
Read	This enumeration literal shall indicate that the storage may be read.
Streaming	This enumeration literal shall indicate that the storage may be read sequentially.
Write	This enumeration literal shall indicate that the storage may be written multiple times.
WriteOnce	This enumeration literal shall indicate that the storage may be written only once.

The defined property values are listed in Table 98. This collection specifies supported storage allocation policies.

Table 98: SupportedProvisioningPolicies property values #####SupportedRecoveryTimeObjectives:

string	Description
Fixed	This enumeration literal specifies storage shall be fully allocated.
Thin	This enumeration literal specifies storage may be over allocated.

The defined property values are listed in Table 99. This collection specifies supported expectations for time to access the primary store after recovery.

string	Description			
Nearline	Access to a replica shall be consistent with switching access to a different path through a different front-end interconnection infrastructure. Some inconsistency may occur. A restore step may be required before recovery can commence.			
Offline	Access to a replica may take a significant amount of time. No direct connection to the replica is assumed. Some inconsistency loss may occur. A restore step is likely to be required.			
OnlineActive	Access to synchronous replicas shall be instantaneous.			
OnlinePassive	Access to a synchronous replica shall be consistent with switching access to a different path the same front-end interconnect. A restore step shall not be required.			

Table 99: SupportedRecoveryTimeObjectives property values

9.4.13 FeaturesRegistry 1.1.0

9.4.13.1 Description This resource shall be used to represent a Feature registry for a Redfish implementation.

9.4.13.2 Properties The properties defined for the FeaturesRegistry 1.1.1 schema are summarized in Table 100.

 Table 100:
 FeaturesRegistry 1.1.0 properties

Property	Туре	Attributes	Notes
Actions {}	object		The Actions property shall contain the available actions for this resource.

Туре	Attributes	Notes
string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
object	required	The pattern property shall represent the suffix to be used in the FeatureId and shall be unique within this message registry.
object		Property names follov regular expression pattern "[A-Za-z0-9]+"
string	read-only required (null)	If present, the value shall define a profile definition that contains the named profile declaration.
string	read-only required (null)	The value shall be a detailed description o the feature.
string	read-only required (null)	The value shall be the unique name of the feature prefixed by the defining organization separated by a period (e.g. 'vendor.feature').
	string object object string string	string read-only (null) object required object string read-only required (null) string read-only required (null) string read-only

Туре	Attributes	Notes
string	read-only required (null)	The value shall uniquely identify the version of the feature using the major.minor.errata format.
string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
string	read-only required	The value of this property shall be a string consisting of ar RFC 5646 language code.
string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with th 'Name' clause of the Redfish Specification
	string string	string read-only required (null) string read-only required string read-only required

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.
OwningEntity	string	read-only required	The value of this property shall be a string that represents the publisher of this registry.
RegistryPrefix	string	read-only required	The value of this property shall be the prefix used in IDs which uniquely identifies all of the Features in this registry as belonging to this registry.
RegistryVersion	string	read-only required	The value of this property shall be the version of this message registry. The format of this string shall be of the format majorversion.minorver

9.4.14 FileShare 1.2.0

9.4.14.1 Description This resource shall be used to represent a shared set of files with a common directory structure.

9.4.14.2 URIs /redfish/v1/Storage/{*StorageId*}/FileSystems/{*FileSystemsId*}/ ExportedFileShares/{*ExportedFileSharesId*} /redfish/v1/StorageServices/{*Storage-ServiceId*}/FileSystems/{*FileSystemsId*}/ExportedFileShares/{*ExportedFileSharesId*} /redfish/v1/Systems/{*ComputerSystemsId*}/Storage/{*StorageId*}/FileSystems/ *{FileSystemsId*}/ExportedFileShares/{*ExportedFileSharesId*}

9.4.14.3 Properties The properties defined for the FileShare 1.2.0 schema are summarized in Table 101.

Table 101: FileShare 1.2.0 properties

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
CASupported	boolean	read-write (null)	The value of this property shall indicate that Continuous Availability is supported. Client/Server mediated recovery from network and server failure with application transparency. This property shall be NULL unless the FileSharingProtocols property includes SMB. The default value for this property is false.

Property	Туре	Attributes	Notes
DefaultAccess Capabilities []	array (string (enum))	read-only(null)	The value of this property shall be an array containing entries for the default access capabilities for the file share Each entry shall specify a default access privilege. The types of default access can include Read, Write, and/or Execute. For the possible property values, see DefaultAccessCapabilities in Property details.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
EthernetInterfaces object {			The value shall be a link to a EthernetInterfaceCollection with members that provide access to the file share.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifie for the resource and it shall be of the form defined in the Redfish specification.
} ExecuteSupport	boolean	read-only (null)	The value of this property shall indicate whether Execute access is supported by the file share. The default value for this property is false

Property	Туре	Attributes	Notes
FileSharePath	string	read-only (null)	The value of this property shall be a path (relative to the file system root) to the exported file or directory on the file system where this file share is hosted.
FileShareQuotaT	/p ≢ring (enum)	read-write(null)	If FileShareQuotaType is present, a value of Soft shall specify that quotas are not enforced, and a value of Harc shall specify that writes shall fail if the space consumed would exceed the value of the FileShareTotalQuotaBytes property. <i>For the possible</i> <i>property values, see</i> <i>FileShareQuotaType in</i> <i>Property details.</i>
FileShareRemain QuotaBytes	ing teger (By)	read-only(null)	If present, the value of this property shall indicate the remaining number of bytes that may be consumed by this file share.
FileShareTotalQu Bytes	ota teger (By)	read-write(null)	If present, the value of this property shall indicate the maximum number of bytes that may be consumed by this file share.

Property	Туре	Attributes	Notes
FileSharingProto	c als ray (string (enum))	read-only(null)	This property shall be an array containing entries for the file sharing protocols supported by this file share. Each entry shall specify a file sharing protocol supported by the file system. <i>For the</i> <i>possible property values, see</i> <i>FileSharingProtocols in</i> <i>Property details.</i>
Id	string	read-only required	This property shall contain the identifier for this resourc The value shall conform with the 'Id' clause of the Redfish Specification.
Links {	object		The Links property, as described by the Redfish Specification, shall contain references to resources that are related to, but not contained by (subordinate to), this resource.
ClassOfSer- vice {	object		This value shall be a link to the ClassOfService for this fil share. See the <i>ClassOfServic</i> schema for details on this property.
@odata.id	string	read-only	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.

roperty	Туре	Attributes	Notes
FileSystem {	object		The value shall be a link to the file system containing the file share. See the <i>FileSystem</i> schema for details on this property.
@odata.id	string	read-only	Link to a FileSystem resource. See the Links section and the <i>FileSystem</i> schema for details.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification-described requirements. For property details, see Oem.
owSpaceWarnin	garray	read-write	This property shall be an
hresholdPer- ents []	(%) (in- teger, null)		array containing entries for the percentages of file share capacity at which low space warning events are be issued. A LOW_SPACE_THRESHOLD_WARNIN event shall be triggered each time the remaining file share capacity value becomes less than one of the values in the array. The following shall be true: Across all CapacitySources entries, percent = (SUM(AllocatedBytes) - SUM(ConsumedBytes))/SUM(Alloc

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.
RemainingCapa Percent (v1.1+)	acitý nteger	read-only (null)	If present, this value shall return {[(SUM(AllocatedBytes) -
			SUM(ConsumedBytes)]/SUM(AllocatedBytes)}*1 represented as an integer value.
RootAccess	boolean	read-only (null)	The value of this property shall indicate whether Root access is allowed by the file share. The default value for this property is false.
Status {}	object		This value of this property shall indicate the status of the file share. For property details, see Status.
WritePolicy	string (enum)	read-only(null)	The value of this property shall define how writes are replicated to the shared source. For the possible property values, see WritePolicy in Property details.

9.4.14.4 Property details

9.4.14.4.1 DefaultAccessCapabilities: The defined property values are listed in Table 102. The value of this property shall be an array containing entries for the default access capabilities for the file share. Each entry shall specify a default access privilege. The types of default access can include Read, Write, and/or Execute.

string	Description
Append	This enumeration literal shall indicate that the storage may be written only to append.
Execute	This value shall indicate that Execute access is allowed by the file share.
Read	This enumeration literal shall indicate that the storage may be read.
Streaming	This enumeration literal shall indicate that the storage may be read sequentially.
Write	This enumeration literal shall indicate that the storage may be written multiple times.
WriteOnce	This enumeration literal shall indicate that the storage may be written only once.

Table 102: DefaultAccessCapabilities property values ##### FileShareQuotaType:

The defined property values are listed in Table 103. If FileShareQuotaType is present, a value of Soft shall specify that quotas are not enforced, and a value of Hard shall specify that writes shall fail if the space consumed would exceed the value of the FileShareTotalQuotaBytes property.

Table 103: FileShareQuotaType property values ##### FileSharingProtocols:

string	Description
Hard	This value shall indicate that quotas are enabled and enforced.
Soft	This value shall indicate that quotas are enabled but not enforced.

The defined property values are listed in Table 104. This property shall be an array containing entries for the file sharing protocols supported by this file share. Each entry shall specify a file sharing protocol supported by the file system.

string	Description
NFSv3	This value shall indicate that NFSv3, as defined in RFC 1813, is supported by the file system.
NFSv4_0	This value shall indicate that NFSv4, as defined in RFC 7530, is supported by the file system.
NFSv4_1	This value shall indicate that NFSv4.1, as defined in RFC 5661, is supported by the file system.
SMBv2_0	This value shall indicate that Server Message Block version 2.0 is supported by the file system.
SMBv2_1	This value shall indicate that Server Message Block version 2.1 is supported by the file system.
SMBv3_0	This value shall indicate that Server Message Block version 3.0 is supported by the file system.
SMBv3_0_2	This value shall indicate that Server Message Block version 3.0.2 is supported by the file system.
SMBv3_1_1	This value shall indicate that Server Message Block version 3.1.1 is supported by the file system.

 Table 104: FileSharingProtocols property values ##### WritePolicy:

The defined property values are listed in Table 105. The value of this property shall define how writes are replicated to the shared source.

Table 105: WritePolicy property values

string	Description
Active	This enumeration literal shall indicate Active-Active (i.e. bidirectional) synchronous updates.
Adaptive	This enumeration literal shall indicate that an implementation may switch between synchronous and asynchronous modes.

string	Description
Asynchronous	This enumeration literal shall indicate Asynchronous updates.
Synchronous	This enumeration literal shall indicate Synchronous updates.

9.4.15 FileShareCollection

9.4.15.1 URIs /redfish/v1/Storage/{*StorageId*}/FileSystems/{*FileSystemsId*}/ ExportedFileShares /redfish/v1/StorageServices/{*StorageServiceId*}/FileSystems/ {*FileSystemsId*}/ExportedFileShares

9.4.15.2 Properties The properties defined for the FileShareCollection schema are summarized in Table 106.

Table 106:	FileShareCollection	properties
------------	---------------------	------------

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		This property shall contain references to the members of this FileSystem collection
@odata.id	string	read-only	Link to a FileShare resource. See the Links section and the <i>FileShare</i> schema for details.

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
}]			
Members@odata.n	extLinkstring (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All value for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.16 FileSystem 1.2.2

9.4.16.1 Description This resource shall be used to represent an instance of a hierarchical namespace of files.

9.4.16.2 URIs /redfish/v1/Storage/{*StorageId*}/FileSystems/{*FileSystemId*} /redfish/ v1/StorageServices/{*StorageServiceId*}/FileSystems/{*FileSystemId*}

9.4.16.3 Properties The properties defined for the FileSystem 1.2.2 schema are summarized in Table 107.

Property	Туре	Attributes	Notes
AccessCapabilities []	array (string (enum))	read-write(null)	This property shall be an array containing entries for the supported IO access capabilities. Each entry shall specify a current storage access capability. For the possible property values, see AccessCapabilities in Property details.
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
BlockSizeBytes	integer (By)	read-only(null)	The value of this property shall be the block size of the file system in bytes.
Capacity {}	object		The value of this property shall be the capacity allocated to the file system in bytes. For property details, see Capacity v1.0.0).

 Table 107: FileSystem 1.2.2 properties

Property	Туре	Attributes	Notes
CapacitySources [{	array		This property shall be an array containing entries for all the capacity sources for the file system. Each entry shall provide capacity allocation information from a named resource.
@odata.id	string	read-write	Link to a CapacitySource resource. See the Links section and the <i>CapacitySource</i> schema for details.
}] CasePreserved	boolean	read-write (null)	This property shall indicate that the case of file names is preserved by the file system. A value of True shall indicate that case of file names shall be preserved.
CaseSensitive	boolean	read-write (null)	This property shall indicate that case sensitive file names are supported by the file system. A value of True shall indicate that file names are case sensitive.

Property	Туре	Attributes	Notes
CharacterCodeSet []	array (string (enum))	read-write(null)	This property shall be an array containing entries fo the character sets or encodings supported by the file system. Each entry shall specify a character set encoding supported by the file system. <i>For the</i> <i>possible property values,</i> <i>see CharacterCodeSet in</i> <i>Property details.</i>
ClusterSizeBytes	integer (By)	read-write(null)	This value shall specify the minimum file allocation size imposed by the file system. This minimum allocation size shall be the smallest amount of storage allocated to a file by the file system. Under stress conditions, the file system may allocate storage in amounts smaller than this value.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
ExportedShares {	object		This property shall be an array of exported file shares of this file system. Each entry shall define an exported file share of this file system. Contains a link to a resource.

	Туре	Attributes	Notes
@odata.id	string	read-write	Link to Collection of <i>FileShare</i> . See the FileShare schema for details.
ł			
ld	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifiers (v1.1.1+) [[}]	array (object)		This property shall contain a list of all known durable names for this file system. For property details, see Identifier v1.14.1).
ImportedShares (v1.0.1+) [{	array		The value shall be an array of imported file shares.
ImportedShare		read-write	
]			
IOStatistics (v1.2+) {}	object		The value shall represent IO statistics for this FileSystem. For property details, see IOStatistics.
Links {	object		This property shall contain links to other resources that are related to this resource.
ClassOfService {	object		This value shall be a link to the ClassOfService for this file system. See the <i>ClassOfService</i> schema for details on this property.

Property	Туре	Attributes	Notes
@odata.id	string	read-only	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
} Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification-described requirements. For property
ReplicaCollection	array		details, see Oem. This property shall be an array of links to replicas fo this file system. Each entry shall be a link to a replica for this file system.
@odata.id	string	read-only	Link to another FileSysten resource.
}] SpareResource- Sets (v1.2+) [{	array		Each referenced SpareResourceSet shall contain resources that may be utilized to replace the capacity provided by a failed resource having a compatible type.
@odata.id	string	read-write	Link to a SpareResourceSe resource. See the Links section and the <i>SpareResourceSet</i> schema for details.

Version 1.2.4

Property	Туре	Attributes	Notes
}]			
}			
LowSpaceWarni	ngThre shøl /dPo	encentswrite	This property shall be an
[]	(%) (in-		array containing entries for
	teger,		the percentages of file
	null)		system capacity at which
			low space warning events
			are be issued. A
			LOW_SPACE_THRESHOLD_WARNING
			event shall be triggered
			each time the remaining
			file system capacity value
			becomes less than one of
			the values in the array. The
			following shall be true:
			Across all CapacitySources
			entries, percent =
			(SUM(AllocatedBytes) -
			SUM(ConsumedBytes))/SUM(AllocatedBytes)
MaxFileNameLe	ngthByttesger	read-write(null)	If specified, this value shall
	(By)		specify the maximum
			length of a file name within
			the file system.
Name	string	read-only required	This property shall contain
	0	5 1	the name of this resource
			or array member. The
			value shall conform with
			the 'Name' clause of the
			Redfish Specification.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain
			the OEM extensions. All
			values for properties that
			this object contains shall
			conform to the Redfish
			Specification-described
			requirements. For property
			details, see Oem.
RecoverableCapacity	SäutregeCo	ouretad-write (null)	The value is the number of
(v1.2+)			available capacity source
			resources currently
			available in the event that
			an equivalent capacity
			source resource fails.
RemainingCapacity	object		The value of this property
]}			shall be the remaining
			capacity allocated to the
			file system in bytes. For
			property details, see
			Capacity v1.0.0).
RemainingCapacityPe	ericeneger	read-only (null)	If present, this value shall
(v1.1+)			return
			{[(SUM(AllocatedBytes) -
			SUM(ConsumedBytes)]/SUM(AllocatedBytes)}*
			represented as an integer
			value.

Property	Туре	Attributes	Notes
ReplicaInfo {	object		If this file system is a replica, this value shall describe its replication attributes. This value shall not be present if this file system is not a replica. A file system may be both a source and a replica. See the <i>StorageReplicaInfo</i> schema for details on this property.
@odata.id	string	read-only	Link to a ReplicaInfo resource. See the Links section and the <i>StorageReplicaInfo</i> schema for details.
}			
ReplicaTargets (v1.2.1+) [{	array		The value shall reference the target replicas that are sourced by this replica.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

9.4.16.4 Property details

9.4.16.4.1 AccessCapabilities: The defined property values are listed in Table 108. This property shall be an array containing entries for the supported IO access capabilities. Each entry shall specify a current storage access capability.

string	Description
Append	This enumeration literal shall indicate that the storage may be written only to append.
Execute	This value shall indicate that Execute access is allowed by the file share.
Read	This enumeration literal shall indicate that the storage may be read.
Streaming	This enumeration literal shall indicate that the storage may be read sequentially.
Write	This enumeration literal shall indicate that the storage may be written multiple times.
WriteOnce	This enumeration literal shall indicate that the storage may be written only once.

Table 108: AccessCapabilities property values ##### CharacterCodeSet:

The defined property values are listed in Table 109. This property shall be an array containing entries for the character sets or encodings supported by the file system. Each entry shall specify a character set encoding supported by the file system.

string	Description
ASCII	This value shall indicate that the ASCII character encoding is supported by the file system.
ExtendedUNIXCode	This value shall indicate that Extended Unix Code character encoding is supported by the file system.
ISO2022	This value shall indicate that ISO-2022 character encoding is supported by the file system.
ISO8859_1	This value shall indicate that ISO-8859-1 character encoding is supported by the file system.
UCS_2	This value shall indicate that the UCS-2 character encoding is supported by the file system.

Table 109:	CharacterCodeSet property values	
------------	----------------------------------	--

string	Description
Unicode	This value shall indicate that Unicode character encoding is supported by the file system.
UTF_16	This value shall indicate that the UTF-16 character encoding is supported by the file system.
UTF_8	This value shall indicate that the UTF-8 character encoding is supported by the file system.

9.4.17 FileSystemCollection

9.4.17.1 URIs /redfish/v1/Storage/{*StorageId*}/FileSystems /redfish/v1/StorageServices/{*StorageServiceId*}/FileSystems

9.4.17.2 Properties The properties defined for the FileSystemCollection schema are summarized in Table 110.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		This property shall contain references to the members of this FileSystem collection

 Table 110: FileSystemCollection properties

Property	Туре	Attributes	Notes
@odata.id	string	read-only	Link to a FileSystem resource. See the Links section and the <i>FileSystem</i> schema for details.
Members@odata.nex	l ink string	read-only	The value of this
inember sæ oddaniek	(URI)	icuu oniy	property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.18 HostedStorageServices

9.4.18.1 URIs /redfish/v1/Systems/{*ComputerSystemId*}/HostedServices

9.4.18.2 Properties The properties defined for the HostedStorageServices schema are summarized in Table 111.

Table 111: HostedStorageServices properties

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a StorageService resource.
@odata.id	string	read-only	Link to a StorageService resource. See the Links section and the <i>StorageService</i> schema for details.
}]			

Property	Туре	Attributes	Notes
Members@odata.n	e xtLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.19 IOConnectivityLineOfService 1.2.1

9.4.19.1 Description An IO connectivity service option may be used to specify the characteristics of storage connectivity.

9.4.19.2 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*}/IOConnectivityLinesOfService/{*IOConnectivityLineOfServiceld*} / redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService/IOConnectivityLinesOfService/{*IOConnectivityLineOfServiceld*}

9.4.19.3 Properties The properties defined for the IOConnectivityLineOfService 1.2.1 schema are summarized in Table 112.

Property	Туре	Attributes	Notes
AccessProtocols []	array (string (enum))	read-write(null)	The Enumeration Literal shall specify the Access protocol for this service option. NOTE: If multiple protocols are specified, the corresponding Max- SupportedIOPS governs the max achieved across all protocol uses. This may be less than the sum of the individual max values, which may be specified by individual Line of Service entries. For the possible property values, see AccessProtocols in Property details.

Table 112: IOConnectivityLineOfService 1.2.1 properties

Property	Туре	Attributes	Notes
Actions (v1.2+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
MaxBytesPerSeco (v1.1+)	n d hteger (By/s)	read-write(null)	The value shall be the maximum bytes per second that a connection can support.
MaxIOPS (v1.1+)	integer ([IO]/s)	read-write(null)	The value shall be the maximum IOs per second that the connection shall allow for the selected access protocol.

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.19.4 Property details

9.4.19.4.1 AccessProtocols: The defined property values are listed in Table 113. The Enumeration Literal shall specify the Access protocol for this service option. NOTE: If multiple protocols are specified, the corresponding MaxSupportedIOPS governs the max achieved across all protocol uses. This may be less than the sum of the individual max values, which may be specified by individual Line of Service entries.

This value shall indicate conformance to the Intel Advanced Host Controller Interface (AHCI) Specification.
This value shall indicate conformance to the VESA DisplayPort Specification.
This value shall indicate conformance to the Digital Display Working Group DVI-A, DVI-D, or DVI-I Specification.
This value shall indicate conformance to the IEEE 802.3 Ethernet specification.
This value shall indicate conformance to the T11 Fibre Channel Physical and Signaling Interface Specification.
This value shall indicate conformance to the T11 FC-BB-5 Specification.
This value shall indicate conformance to the INCITS 481: Information Technology - Fibre Channel Protocol for SCSI
This value shall indicate conformance to the ANSI FC-SB-3 Single-Byte Command Code Sets-3 Mapping Protocol for the Fibre Channel (FC) protocol. Fibre Connection (FICON is the IBM-proprietary name for this protocol.
This value shall indicate conformance to the RFC114-defined File Transfer Protocol (FTP).
This value shall indicate conformance to the Gen-Z Core Specification.
This value shall indicate conformance to the HDMI Forum HDMI Specification.
This value shall indicate conformance to the Hypertext Transport Protocol (HTTP) as defined by RFC3010 or RFC5661.
This value shall indicate conformance to the Hypertext Transfer Protocol Secure (HTTPS) as defined by RFC2068 of RFC2616, which uses Transport Layer Security (TLS) as defined by RFC5246 or RFC6176.

Table 113: AccessProtocols property values

string	Description
12C	This value shall indicate conformance to the NXP Semiconductors I2C-bus Specification.
InfiniBand	This value shall indicate conformance to the InfiniBand Architecture Specification-defined InfiniBand protocol.
iSCSI	This value shall indicate conformance to the IETF Internet Small Computer Systems Interface (iSCSI) Specification.
iWARP	This value shall indicate conformance to the RFC5042-defined Internet Wide Area RDMA Protocol (iWARP) that uses the transport layer mechanisms as defined by RFC5043 or RFC5044.
MultiProtocol	This value shall indicate conformance to multiple protocols.
NFSv3	This value shall indicate conformance to the RFC1813-defined Network File System (NFS) protocol.
NFSv4	
NVLink	This value shall indicate conformance to the NVIDIA NVLink protocol.
NVMe	This value shall indicate conformance to the Non-Volatile Memory Host Controller Interface Specification.
NVMeOverFabrics	This value shall indicate conformance to the NVM Express over Fabrics Specification.
OEM	This value shall indicate conformance to an OEM-specific architecture and the OEM section may include additional information.
PCIe	This value shall indicate conformance to the PCI-SIG PCI Express Base Specification.
RoCE	This value shall indicate conformance to the InfiniBand Architecture Specification-defined RDMA over Converged Ethernet Protocol.
RoCEv2	This value shall indicate conformance to the InfiniBand Architecture Specification-defined RDMA over Converged Ethernet Protocol version 2.

string	Description		
SAS	This value shall indicate conformance to the T10 SAS Protocol Layer Specification.		
SATA	This value shall indicate conformance to the Serial ATA International Organization Serial ATA Specification.		
SFTP	This value shall indicate conformance to the RFC114-defined SSH File Transfer Protocol (SFTP) that uses Transport Layer Security (TLS) as defined by RFC5246 or RFC6176.		
SMB	This value shall indicate conformance to the Server Message Block (SMB), or Common Internet File System (CIFS), protocol.		
ТСР	This value shall indicate conformance to the IETF-defined Transmission Control Protocol (TCP). For example, RFC7414 defines the roadmap of the TCP specification.		
TFTP	This value shall indicate conformance to the IETF-define Trivial File Transfer Protocol (TFTP). For example, RFC13 defines the core TFTP version 2 specification.		
UDP	This value shall indicate conformance to the IETF-defined User Datagram Protocol (UDP). For example, RFC768 defines the core UDP specification.		
UHCI	This value shall indicate conformance to the Intel Universal Host Controller Interface (UHCI) Specification, Enhanced Host Controller Interface Specification, or the Extensible Host Controller Interface Specification.		
USB	This value shall indicate conformance to the USB Implementers Forum Universal Serial Bus Specification.		
VGA	This value shall indicate conformance to the VESA SVGA Specification.		

9.4.20 IOConnectivityLoSCapabilities 1.2.0

9.4.20.1 Description Each instance of IOConnectivityLoSCapabilities describes capabilities of the system to support various IO Connectivity service options.

9.4.20.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/IOConnectivity-LoSCapabilities

9.4.20.3 Properties The properties defined for the IOConnectivityLoSCapabilities 1.2.0 schema are summarized in Table 114.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value identifies thi resource. The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).

Table 114: IOConnectivityLoSCapabilities 1.2.0 properties

Property	Туре	Attributes	Notes
MaxSupported BytesPerSec- ond	integer (By/s)	read-write(null)	The value shall be the maximum bytes per second that a connection can support.
MaxSupportedIC (v1.1+))Ħŝ teger ([IO]/s)	read-write(null)	The value shall be the maximum IOPS that a connection can support.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
SupportedAccess Protocols []	(string (enum))	read-write(null)	Access protocols supported by this service option. NOTE: SMB+NFS* requires that SMB and at least one of NFSv3 or NFXv4 are also selected, (i.e. {'SMB', 'NFSv4', 'SMB+NFS'}). For the possible property values, see SupportedAccessProto- cols in Property details.*
SupportedLinesO Service [{	f array		The collection shall contain known and supported IOConnectivityLinesOfServic
@odata.id	string	read-write	Link to a IOConnectiv- ityLineOfService resource. See the Links section and the <i>IOCon-</i> <i>nectivityLineOfService</i> schema for details.
}]			

9.4.20.4 Property details

9.4.20.4.1 SupportedAccessProtocols: The defined property values are listed in Table 115. Access protocols supported by this service option. NOTE: SMB+NFS* requires that SMB and at least one of NFSv3 or NFXv4 are also selected, (i.e. {'SMB', 'NFSv4', 'SMB+NFS*'}).

string	Description		
AHCI	This value shall indicate conformance to the Intel Advanced Host Controller Interface (AHCI) Specification.		
DisplayPort	This value shall indicate conformance to the VESA DisplayPort Specification.		
DVI	This value shall indicate conformance to the Digital Display Working Group DVI-A, DVI-D, or DVI-I Specification.		
Ethernet	This value shall indicate conformance to the IEEE 802.3 Ethernet specification.		
FC	This value shall indicate conformance to the T11 Fibre Channel Physical and Signaling Interface Specification.		
FCoE	This value shall indicate conformance to the T11 FC-BB-5 Specification.		
FCP	This value shall indicate conformance to the INCITS 48 Information Technology - Fibre Channel Protocol for S		
FICON	This value shall indicate conformance to the ANSI FC-SB-3 Single-Byte Command Code Sets-3 Mapping Protocol for the Fibre Channel (FC) protocol. Fibre Connection (FICON is the IBM-proprietary name for this protocol.		
FTP	This value shall indicate conformance to the RFC114-defined File Transfer Protocol (FTP).		
GenZ	This value shall indicate conformance to the Gen-Z Core Specification.		
HDMI	This value shall indicate conformance to the HDMI Forum HDMI Specification.		
НТТР	This value shall indicate conformance to the Hypertext Transport Protocol (HTTP) as defined by RFC3010 or RFC5661.		
HTTPS	This value shall indicate conformance to the Hypertext Transfer Protocol Secure (HTTPS) as defined by RFC2068 o RFC2616, which uses Transport Layer Security (TLS) as defined by RFC5246 or RFC6176.		

Table 115: SupportedAccessProtocols property values

string	Description
12C	This value shall indicate conformance to the NXP Semiconductors I2C-bus Specification.
InfiniBand	This value shall indicate conformance to the InfiniBand Architecture Specification-defined InfiniBand protocol.
iSCSI	This value shall indicate conformance to the IETF Internet Small Computer Systems Interface (iSCSI) Specification.
iWARP	This value shall indicate conformance to the RFC5042-defined Internet Wide Area RDMA Protocol (iWARP) that uses the transport layer mechanisms as defined by RFC5043 or RFC5044.
MultiProtocol	This value shall indicate conformance to multiple protocols.
NFSv3	This value shall indicate conformance to the RFC1813-defined Network File System (NFS) protocol.
NFSv4	
NVLink	This value shall indicate conformance to the NVIDIA NVLink protocol.
NVMe	This value shall indicate conformance to the Non-Volatile Memory Host Controller Interface Specification.
NVMeOverFabrics	This value shall indicate conformance to the NVM Express over Fabrics Specification.
OEM	This value shall indicate conformance to an OEM-specific architecture and the OEM section may include additional information.
PCIe	This value shall indicate conformance to the PCI-SIG PCI Express Base Specification.
RoCE	This value shall indicate conformance to the InfiniBand Architecture Specification-defined RDMA over Converged Ethernet Protocol.
RoCEv2	This value shall indicate conformance to the InfiniBand Architecture Specification-defined RDMA over Converged Ethernet Protocol version 2.

string	Description		
SAS	This value shall indicate conformance to the T10 SAS Protocol Layer Specification.		
SATA	This value shall indicate conformance to the Serial ATA International Organization Serial ATA Specification.		
SFTP	This value shall indicate conformance to the RFC114-defined SSH File Transfer Protocol (SFTP) that uses Transport Layer Security (TLS) as defined by RFC5246 or RFC6176.		
SMB	This value shall indicate conformance to the Server Message Block (SMB), or Common Internet File System (CIFS), protocol.		
ТСР	This value shall indicate conformance to the IETF-defined Transmission Control Protocol (TCP). For example, RFC7414 defines the roadmap of the TCP specification.		
TFTP	This value shall indicate conformance to the IETF-define Trivial File Transfer Protocol (TFTP). For example, RFC13 defines the core TFTP version 2 specification.		
UDP	This value shall indicate conformance to the IETF-defined User Datagram Protocol (UDP). For example, RFC768 defines the core UDP specification.		
UHCI	This value shall indicate conformance to the Intel Universa Host Controller Interface (UHCI) Specification, Enhanced Host Controller Interface Specification, or the Extensible Host Controller Interface Specification.		
USB	This value shall indicate conformance to the USB Implementers Forum Universal Serial Bus Specification.		
VGA	This value shall indicate conformance to the VESA SVGA Specification.		

9.4.21 IOPerformanceLineOfService 1.1.1

9.4.21.1 Description This structure may be used to define a service option related to IO performance.

9.4.21.2 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*}/IOPerformanceLinesOfService/{*IOPerformanceLineOfServiceld*} / redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService/IOPerformanceLinesOfService/{*IOPerformanceLineOfServiceld*}

9.4.21.3 Properties The properties defined for the IOPerformanceLineOfService 1.1.1 schema are summarized in Table 116.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
AveragelOOpera LatencyMi- croseconds	tion teger (us)	read-write(null)	The value shall be the expected average IO latency in microseconds calculated over sample periods (see SamplePeriodSeconds).
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.

Table 116: IOPerformanceLineOfService 1.1.1 properties

Property	Туре	Attributes	Notes
OOperationsPer SecondIsLim- ted	boolean	read-write (null)	If true, the system should not allow IOPS to exceed MaxIoOperationsPerSec- ondPerTerabyte * VolumeSize. Otherwise, the system shall not enforce a limit. The default value for this property is false.
OWorkload {}	object		The value shall be a description of the expected workload. The workload provides the context in which the values of MaxIOOperationsPerSec- ondPerTerabyte and AverageIOOperationLaten- cyMicroseconds are expected to be achievable. For property details, see
MaxIOOperations SecondPerTer- abyte	s Reb eger (1/s/TBy)	read-write(null)	IOWorkload v1.0.0). The value shall be the amount of IOPS a volume of a given committed size in Terabytes can support. This IOPS density value is useful as a metric that is independent of capacity. Cost is a function of this value and the AverageIOOperationLatence

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.
SamplePeriod	string	read-write (null)	The value shall be an ISO 8601 duration specifying the sampling period over which average values are calculated.

9.4.22 IOPerformanceLoSCapabilities 1.3.0

9.4.22.1 Description Each instance of IOPerformanceLoSCapabilities shall describe the capabilities of the system to support various IO performance service options.

9.4.22.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*}/IOPerformanceLoSCapabilities

9.4.22.3 Properties The properties defined for the IOPerformanceLoSCapabilities 1.3.0 schema are summarized in Table 117.

Property	Туре	Attributes	Notes
Actions (v1.1+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).
IOLimitingIsSupp	ortedoolean	read-write (null)	If true, the system should limit IOPS to MaxIOOperationsPer- SecondPerTerabyte * (Volume Size in Terabytes). Otherwise, the system shall not inforce a limit. The default value for this property is false.

Table 117: IOPerformanceLoSCapabilities 1.3.0 properties

Property	Туре	Attributes	Notes
MaxSamplePeriod	string (s)	read-write(null)	The value shall be an ISO 8601 duration specifying the maximum sampling period over which average values are calculated.
MinSamplePeriod	string (s)	read-write(null)	The value shall be an ISO 8601 duration specifying the minimum sampling period over which average values are calculated.
MinSupportedloOpo LatencyMicrosec- onds	erattieg er (us)	read-write(null)	The value shall be the minimum supported average IO latency in microseconds calculated over the SamplePeriod.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shal conform with the 'Name clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
SupportedIOWor [{}]	kloaats ay (object)	* (null)*	The value shall be a collection of supported workloads. For property details, see IOWorkload
SupportedLinesC [{)fSeavicey		The value shall be a collection supported IO performance service options.
@odata.id	string	read-write	Link to a IOPerformance LineOfService resource. See the Links section and the <i>IOPerformance- LineOfService</i> schema for details.

9.4.23 LineOfService 1.1.0

9.4.23.1 Description This service option is the abstract base class for other ClassofService and concrete lines of service.

9.4.23.2 Properties The properties defined for the LineOfService 1.1.0 schema are summarized in Table 118.

Table 118	LineOfService	e 1.1.0 propert	ies
-----------	---------------	-----------------	-----

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shal conform with the 'Name clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values fo properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.

9.4.24 LineOfServiceCollection

9.4.24.1 URIs /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/ {*ClassOfServiceld*}/DataProtectionLinesOfService /redfish/v1/StorageServices/ {*StorageServiceld*}/ClassesOfService/{*ClassOfServiceld*}/DataSecurityLinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/ClassesOfService/{*ClassOfServiceld*}/DataStorageLinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/ ClassesOfService/{*ClassOfServiceld*}/IOConnectivityLinesOfService /redfish/v1/ StorageServices/{*StorageServiceld*}/ClassesOfService/{*ClassOfServiceld*}/IOPerformanceLinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService LinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService/ DataSecurityLinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/ LinesOfService/DataStorageLinesOfService /redfish/v1/StorageServices/{*StorageServiceld*}/LinesOfService/IOConnectivityLinesOfService /redfish/v1/StorageServices/ *{StorageServiceld*}/LinesOfService/IOPerformanceLinesOfService

9.4.24.2 Properties The properties defined for the LineOfServiceCollection schema are summarized in Table 119.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a LineOfService resource.
@odata.id	string	read-only	Link to a LineOfService resource. See the Links section and the <i>LineOfService</i> scheme for details.

Table 119: LineOfServiceCollection properties

}]

Property	Туре	Attributes	Notes
Members@odata.	. nextLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.25 NVMeDomain 1.1.0

9.4.25.1 Description Properties for the Domain.

9.4.25.2 URIs /redfish/v1/NVMeDomains/{*NVMeDomainId*}

9.4.25.3 Properties The properties defined for the NVMeDomain 1.1.0 schema are summarized in Table 120.

Property	Туре	Attributes	Notes
Actions {}	object		This property shal contain the available actions for this resource.
AvailableFirmwareIr [{	nagesay		A collection of available firmware images.
@odata.id	string	read-only	Link to a NVMe- FirmwareImage resource. See the Links section and the <i>NVMe-</i> <i>FirmwareImage</i> schema for details.
}]			
Description	string	read-only (null)	This property shal contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
DomainMembers [{	array		The members of the domain.

Table 120: NVMeDomain 1.1.0 properties

Property	Туре	Attributes	Notes
<pre>@odata.id }]</pre>	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
Id	string	read-only required	This property shal contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish
Links {	object		Specification. This property sha contain links to resources that are related to but are not contained by or subordinate to this resource.
AssociatedDo- mains [{	array		This property shal contain an array o links to resources of type NVMeDomain tha represent associated domains.

Property	Туре	Attributes	Notes
@odata.id	string	read-only	Link to another NVMeDomain resource.
)] Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.
MaximumCapacityPer EnduranceGroup- Bytes	integer (By)	read-only(null)	This property shall contain the maximum capacity per endurance group in bytes of this NVMe Domain.
Name	string	read-only required	This property shal contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.

Property 1	Гуре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.
Status {}	object		This property shall contain any status or health properties of the resource. For property details, see Status.
TotalDomainCapacityBy (bte ger By)	read-only(null)	This property shall contain the total capacity in bytes of this NVMe Domain.
UnallocatedDomainCapa Bytes (antity er By)	read-only(null)	This property shall contain the total unallocated capacity in bytes of this NVMe Domain.

9.4.26 NVMeDomainCollection

9.4.26.1 URIs /redfish/v1/NVMeDomains

9.4.26.2 Properties The properties defined for the NVMeDomainCollection schema are summarized in Table 121.

Table 121: NVMeDomainCollection properties

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a NVMeDomain resource.
@odata.id	string	read-only	Link to a NVMeDomain resource. See the Links section and the <i>NVMeDomain</i> schema for details.
}]			

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
Members@odata.	nextLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.27 NVMeFirmwareImage 1.1.0

9.4.27.1 Description NVMe Domain firmware image information.

9.4.27.2 URIs /redfish/v1/NVMeDomains/{*DomainId*}/AvailableFirmwareImages/ {*FirmwareImageId*}

9.4.27.3 Properties The properties defined for the NVMeFirmwareImage 1.1.0 schema are summarized in Table 122.

Property	Туре	Attributes	Notes
Actions {}	object		This property shall contain the available actions fo this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
FirmwareVersion	string	read-only (null)	This property shall contain the firmware version of the available NVMe firmware image.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.

Table 122: NVMeFirmwareImage	e 1.1.0 properties
------------------------------	--------------------

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
NVMeDeviceType	string (enum)	read-only(null)	This property shall specify the type of NVMe device for this NVMe firmware image. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>NVMeDeviceType in</i> <i>Property details.</i>
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
Vendor	string	read-only (null)	This property shall include the name of the manufacturer or vendor associate with this NVMe firmware image.

9.4.27.4 Property details

9.4.27.4.1 NVMeDeviceType: The defined property values are listed in Table 123. This property shall specify the type of NVMe device for this NVMe firmware image.

Table 123: NVMeDeviceType property values

string	Description
Drive	Specifies an device type of Drive, indicating a NVMe device that presents as an NVMe SSD device.
FabricAttachArray	Specifies an NVMe device type of FabricAttachArray, indicating a NVMe device that presents an NVMe front-end that abstracts the back end storage, typically with multiple options for availability and protection.
JBOF	Specifies an device type of JBOF, indicating a NVMe device that presents as an NVMe smart enclosure for NVMe devices, typically NVMe Drives.

9.4.28 SpareResourceSet 1.0.1

9.4.28.1 Description The values define a set of spares of a particular type.

9.4.28.2 Properties The properties defined for the SpareResourceSet 1.0.1 schema are summarized in Table 124.

Property	Туре	Attributes	Notes
Actions (v1.0.1+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read- only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Id	string	read- only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Links {	object		This structure shall contain references to resources that are not contained within this resource.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification-described requirements. For property details, see Oem.
On- HandSpares [{	array		The type of resources in the set.
@odata.id	string (URI)	read- only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}]			
Replace- mentSpare- Sets [{	array		Other spare sets that can be utilized to replenish this spare set.
@odata.id	string	read- only	Link to another SpareResourceSet resource.
}]			

Table 124: SpareResourceSet 1.0.1 properties

Property	Туре	Attributes	Notes
}			
Name	string	read- only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.
OnHandLocation [}	object		The location where this set of spares is kept. For property details, see Location v1.5.0).
OnLine	boolean	read- write (null)	This set shall be available online.
ResourceType	string	read- write (null)	The type of resources in the set.
TimeToProvision	string	read- write (null)	Amount of time needed to make an on-hand resource available as a spare. Pattern: -?P(+D)?(T(+H)?(+M)?(+(.+)?S)?)?
TimeToReplenish	string	read- write (null)	Amount of time to needed replenish consumed on-hand resources. Pattern: -?P(+D)?(T(+H)?(+M)?(+(.+)?S)?)?

9.4.29 StorageGroup 1.5.0

9.4.29.1 Description The primary purposes of the collection shall be to govern access to the storage by clients or to add service requirements for the members of the collection. Access to the collected storage by a specified set of hosts shall be made available or unavailable atomically. Requirements specified by the class of service shall be satisfied by each collected element to which they apply. The storage group

may contain: block, file, or object storage; local storage system access points through which the collection is made available; and hosts, or host access points to which the collection is made available.

9.4.29.2 URIs /redfish/v1/Storage/{*StorageId*}/StorageGroups/{*StorageGroupId*} /redfish/v1/Storage/{*StorageId*}/Volumes/{*VolumeId*}/StorageGroups/{*Storage-GroupId*} /redfish/v1/StorageServices/{*StorageServiceId*}/StorageGroups/{*StorageGroupId*} /redfish/v1/StorageServices/{*StorageServiceId*}/Volumes/{*VolumeId*}/ StorageGroups/{*StorageGroupId*}

9.4.29.3 Properties The properties defined for the StorageGroup 1.5.0 schema are summarized in Table 125.

Property	Туре	Attributes	Notes
AccessState	string (enum)	read-write(null)	The value of this property shall describe the access characteristics of this storage group. All associated logical units through all aggregated port shall share this access state. For the possible property values, see AccessState in Property details.

Table 125: StorageGroup 1.5.0 properties

Property	Туре	Attributes	Notes
Actions {	object		The Actions property shall contain the available actions for this resource
<pre>#Storage- Group.ExposeVolumes {}</pre>	object		Exposes the storage of this group via the target endpoints named in the ServerEndpoint- Groups to the initiator endpoints named in the ClientEndpoint- Groups. The property VolumesAreEx- posed shall be set to true when this action is completed. For more information, see the Actions section below.

Property	Туре	Attributes	Notes
#Storage-	object		Hide the storage
Group.HideVolumes {}			of this group
			from the initiato
			endpoints
			named in the
			ClientEndpoint-
			Groups. The
			property
			VolumesAreEx-
			posed shall be
			set to false when
			this action is
			completed. For
			more
			information, see
			the Actions
			section below.
}			
AuthenticationMethod	string	read-write(null)	The value of this
(v1.2+)	(enum)		property must
			be what kind of
			authentication
			that the
			endpoints in this
			StorageGroup
			understands. <i>For</i>
			the possible
			property values,
			see Authentica-
			tionMethod in
			Property details.

Property	Туре	Attributes	Notes
ChapInfo (v1.2+) [{	array		The value of this property must reflect the authentication used by this specific endpoint. If this endpoint represents an initiator, and Authentication- Method is CHAP or MutualCHAP, the Credentials fields CHAPUsername and CHAPSecret must be used. If this endpoint represents a target endpoint and Authentica- tionMethod is MutualCHAP, then MutualCHAP, then MutualCHAP, cret must be
CHAPPassword (v1.3+)	string	read-write (null)	used. The value of this property shall be the password when CHAP authentication is specified.

Property	Туре	Attributes	Notes
CHAPUser (v1.3+)	string	read-write (null)	The value of this property shall be the username when CHAP authentication is specified.
InitiatorCHAPPassword (v1.2+)	string	read-write (null)	The value of this property shall be the shared secret for Mutual (2-way)CHAP authentication.
InitiatorCHAPUser (v1.2+)	string	read-write (null)	If present, this property is the initiator CHAP username for Mutual (2-way) authentication. For example, with an iSCSI scenario, use the initiator iQN.
TargetCHAPPassword (v1.3+)	string	read-write (null)	The value of this property shall be the CHAP Secret for 2-way CHAP authentication.

Swordfish Scalable	Storage Manageme	ent API Specification
Sworalish Scalable	Storuge manageme	sine / a i opeenieation

Property	Туре	Attributes	Notes
TargetCHAPUser (v1.2+)	string	read-write (null)	The value of this property shall be the Target CHAP Username for Mutual (2-way) CHAP authentication. For example, with an iSCSI scenario, use the target iQN.
TargetPassword (v1.2+, deprecated v1.3	string	read-write (null)	The value of this property shall be the CHAP Secret for 2-way CHAP authentication. Deprecated in v1.3 and later. This property is deprecated in favor of TargetCHAP- Password.

}]

Property	Туре	Attributes	Notes
ClientEndpointGroups [{	array		An array of references to groups of client-side endpoints that may be used to make requests to the storage exposed by this StorageGroup. If null, the implementation may allow access to the storage via any client-side endpoint. If empty, the implementation shall not allow access to the storage via any client-side endpoint.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

}]

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
DHChapInfo (v1.3+) [{	array		The value of this property must reflect the authentication used by this specific endpoint when the authentication type is specificed as DHCHAP. If this endpoint represents an initiator, and Authentication- Method is DHCHAP, the Credentials fields LocalDHCHA- PAuthSecret and PeerDHCHA- PAuthSecret must be used.

Property	Туре	Attributes	Notes
LocalDHCHAPAuthSe- cret (v1.3+)	string	read-write (null)	This property shall be the local DHCHAP auth secret for DHCHAP authentication.
PeerDHCHAPAuthSe- cret (v1.3+)	string	read-write (null)	The value of this property shall be the peer DHCHAP auth secret for DHCHAP authentication.
}]			
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
ldentifier {}	object		The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
Links {	object		This property shall contain links to other resources that are related to this resource.
ChildStorageGroups [{	array		An array of references to StorageGroups are incorporate into this StorageGroup.
@odata.id	string	read-write	Link to another StorageGroup resource.
}]			
ClassOfService {	object		The ClassOfService that all storage in this StorageGroup conforms to. Se the <i>ClassOfService</i> schema for details on this property.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links sectio and the <i>ClassOfService</i> schema for details.

Property	Туре	Attributes	Notes
}			
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem
ParentStorageGroups [{	array		An array of references to StorageGroups that incorporate this StorageGroup.
@odata.id }] }	string	read-only	Link to another StorageGroup resource.
, MappedVolumes (v1.1+) [{	array		An array of mapped volumes managed by this storage group.

Туре	Attributes	Notes
string (enum)	read-write(null)	Each entry shall specify the storage access capability for this mapped volume. For the possible property values, see AccessCapability in Property details.
string	read-write (null)	If present, the value is a SCSI Logical Unit Number for the Volume.
object		The value shall reference a mapped Volume See the <i>Volume</i> schema for details on this property.
string	read-write	Link to a Volume resource. See the Links sectior and the <i>Volume</i> schema for details.
	string (enum) string object	string read-write(null) (enum) string read-write (null) object

Property	Туре	Attributes	Notes
MembersAreConsistent	boolean	read-write (null)	The value of this property shall be set to true if all members are in a consistent state. The default value for this property is false.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem

Property	Туре	Attributes	Notes
ReplicaInfo {	object		This property shall describe the replication relationship between this storage group and a corresponding source storage group. See the <i>StorageRepli-</i> <i>caInfo</i> schema for details on this property.
@odata.id	string	read-only	Link to a ReplicaInfo resource. See the Links section and the <i>Stor-</i> <i>ageReplicaInfo</i> schema for details.
J			

reference the target replicas that are sourced by this replica.

Property	Туре	Attributes	Notes
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
ServerEndpointGroups [{	array		An array of references to groups of server-side endpoints that may be used to make requests to the storage exposed by this storage group. If null, the implementation may allow access to the storage via any server-side endpoint. If empty, the implementation shall not allow access to the storage via any server-side

Property	Туре	Attributes	Notes
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}]			
Status {}	object		The property shall contain the status of the StorageGroup. For property details, see Status.
Volumes [{	array		An array of references to volumes managed by this storage group.
@odata.id	string	read-write	Link to a Volume resource. See the Links section and the <i>Volume</i> schema for details.

Property	Туре	Attributes	Notes
VolumesAreExposed	boolean	read-write (null)	The value of this property shall be set to true if storage volumes are exposed to the paths defined by the client and serve endpoints. The default value for this property is false.

9.4.29.4 Actions

9.4.29.4.1 ExposeVolumes Description

Exposes the storage of this group via the target endpoints named in the ServerEndpointGroups to the initiator endpoints named in the ClientEndpointGroups. The property VolumesAreExposed shall be set to true when this action is completed.

Action URI: {Base URI of target resource}/Actions/StorageGroup.ExposeVolumes

Action parameters

This action takes no parameters.

9.4.29.4.2 HideVolumes Description

Hide the storage of this group from the initiator endpoints named in the ClientEndpointGroups. The property VolumesAreExposed shall be set to false when this action is completed.

Action URI: {Base URI of target resource}/Actions/StorageGroup.HideVolumes

Action parameters

This action takes no parameters.

9.4.29.5 Property details

9.4.29.5.1 AccessCapability: The defined property values are listed in Table 126. Each entry shall specify the storage access capability for this mapped volume.

string	Description
Read	Endpoints are allowed to perform reads from the specified resource.
ReadWrite	Endpoints are allowed to perform reads from and writes to the specified resource.

Table 126: AccessCapability property values ##### AccessState:

The defined property values are listed in Table 127. The value of this property shall describe the access characteristics of this storage group. All associated logical units through all aggregated ports shall share this access state.

 Table 127: AccessState property values ##### AuthenticationMethod:

string	Description
NonOptimized	This value shall indicate each endpoint is in an active and non-optimized state.
Optimized	This value shall indicate each endpoint is in an active and optimized state.
Standby	This value shall indicate each endpoint is in a standby state.
Transitioning	This value shall indicate each endpoint is transitioning to a new state.
Unavailable	This value shall indicate each endpoint is in an unavailable state.

The defined property values are listed in Table 128. The value of this property must be what kind of authentication that the endpoints in this StorageGroup understands.

string	Description
СНАР	iSCSI Challenge Handshake Authentication Protocol (CHAP) authentication is used. For ChapInfo, the CHAPUser and CHAPPassword properties shall be used when type CHAP is selected.
DHCHAP	Diffie-Hellman Challenge Handshake Authentication Protocol (DHCHAP) is an authentication protocol used in Fibre Channel. When MutualCHAP is selected, DHChapInfo shall be used instead of CHAPInfo, and the LocalDHCHAPAuthSecret and PeerDHCHAPAuthSecret properties shall be used.
MutualCHAP	iSCSI Mutual Challenge Handshake Authentication Protocol (CHAP) authentication is used. For ChapInfo, the InitiatorCHAPUser, InitiatorCHAPPassword, TargetCHAPUser, and TargetCHAPPassword properties shall be used when type MutualCHAP is selected.
None	

Table 128: AuthenticationMethod property values

9.4.30 StorageGroupCollection

9.4.30.1 URIs /redfish/v1/Storage/{*Storageld*}/StorageGroups /redfish/v1/Storage/ {*Storageld*}/Volumes/{*Volumeld*}/StorageGroups /redfish/v1/StorageServices/ {*StorageServiceld*}/StorageGroups /redfish/v1/StorageServices/{*StorageServiceld*}/ Volumes/{*Volumeld*}/StorageGroups

9.4.30.2 Properties The properties defined for the StorageGroupCollection schema are summarized in Table 129.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a StorageGroup resource.
@odata.id	string	read-only	Link to a StorageGroup resource. See the Links section and the <i>StorageGroup</i> schem for details.
}] Members@odata.ne	ktLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.

Table 129: StorageGroupCollection properties

Property	Туре	Attributes	Notes
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All value for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.31 StoragePool 1.7.1

9.4.31.1 Description A container of data storage capable of providing capacity conforming to one of its supported classes of service. The storage pool does not support IO to its data storage.

9.4.31.2 URIs /redfish/v1/Storage/{*StorageId*}/FileSystems/{*FileSystemId*}/CapacitySources/{*CapacitySourceId*}/ProvidingPools/{*StoragePoolId*} /redfish/v1/ Storage/{*StorageId*}/StoragePools/{*StoragePoolId*} /redfish/v1/Storage/{*StorageId*}/ StoragePools/{*StoragePoolId*}/AllocatedPools/{*AllocatedPoolId*} /redfish/v1/Storage/ {*StorageId*}/StoragePools/{*StoragePoolId*}/CapacitySources/{*CapacitySourceId*}/ProvidingPools/{*ProvidingPoolId*} /redfish/v1/Storage/{*StorageId*}/Volumes/{*VolumeId*}/ AllocatedPools/{*StoragePoolId*} /redfish/v1/Storage/{*StorageId*}/Volumes/{*VolumeId*}/ CapacitySources/{*CapacitySourceId*}/ProvidingPools/{*StoragePoolId*} /redfish/v1/ StorageServices/{StorageServiceId}/FileSystems/{FileSystemId}/CapacitySources/ {CapacitySourceId}/ProvidingPools/{StoragePoolId} /redfish/v1/StorageServices/ {StorageServiceId}/StoragePools/{StoragePoolId} /redfish/v1/StorageServices/ {StorageServiceId}/StoragePools/{StoragePoolId}/AllocatedPools/{AllocatedPoolId} /redfish/v1/StorageServices/{StorageServiceId}/StoragePools/{StoragePoolId}/ CapacitySources/{CapacitySourceId}/ProvidingPools/{ProvidingPoolId} /redfish/ v1/StorageServices/{StorageServiceId}/Volumes/{VolumeId}/AllocatedPools/{Stor-/redfish/v1/StorageServices/{StorageServiceId}/Volumes/{VolumeId}/ agePoolId} CapacitySources/{CapacitySourceId}/ProvidingPools/{StoragePoolId} /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/FileSystems/{FileSystemId}/ CapacitySources/{CapacitySourceId}/ProvidingPools/{StoragePoolId} /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/{StoragePoolId} /redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/ {StoragePoolId}/AllocatedPools/{AllocatedPoolId} /redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/{StoragePoolId}/CapacitySources/ {CapacitySourceId}/ProvidingPools/{ProvidingPoolId} /redfish/v1/Systems/{Computer-SystemId}/Storage/{StorageId}/Volumes/{VolumeId}/AllocatedPools/{StoragePoolId} /redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/Volumes/{VolumeId}/ CapacitySources/{CapacitySourceId}/ProvidingPools/{StoragePoolId}

9.4.31.3 Properties The properties defined for the StoragePool 1.7.1 schema are summarized in Table 130.

Property	Туре	Attributes	Notes
Actions (v1.3+) {	object		The Actions property shall contain the available actions for this resource.
#Storage- Pool.AddDrives {}	object		This action shall be used to add a drive, or set of drives, to an underlying capacity source for the storage pool. <i>For more</i> <i>information, see the</i> <i>Actions section below.</i>

Table 130: StoragePool 1.7.1 properties

Property	Туре	Attributes	Notes
#Storage- Pool.RemoveDrives {	object }		This action shall be used to remove a drive from the StoragePool. This action is targeted at a graceful drive removal process, such as initiating a drive cleanup and data reallocation before drive removal from the pool. The implementation may impose restrictions on the number of drives removed simultaneously <i>For more information, see</i> <i>the Actions section below</i>
#Storage- Pool.SetCompressior {}	object IState		This action shall be used to set the compression state of the storage pool This may be both a highly impactful, as well as a long running operation. <i>For more information, see</i> <i>the Actions section below</i>
#Storage- Pool.SetDeduplicatio {}	object nState		This action shall be used to set the dedupe state o the storage pool. This may be both a highly impactful, as well as a long running operation. For more information, see the Actions section below

Property	Туре	Attributes	Notes
#Storage- Pool.SetEncryptionState {}	object		This action shall be used to set the encryption state of the storage pool. This may be both a highly impactful, as well as a long running operation. <i>For more information, see</i> <i>the Actions section below</i>
}			
AllocatedPools {	object		The value of this property shall contain a reference to the collection of storage pools allocated from this storage pool. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StoragePool</i> . See the StoragePool schema for details.
AllocatedVolumes {	object		The value of this property shall contain a reference to the collection of volumes allocated from this storage pool. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>Volume</i> . See the Volume schema for details.

BlockSizeBytes integer read-only(null) (By) Capacity {} object CapacitySources [{ array	
CapacitySources [{ array	Maximum size in bytes o the blocks which form this Volume. If the block size is variable, then the maximum block size in bytes should be specified If the block size is unknown or if a block concept is not valid (for example, with Memory), enter a 1.
	The value of this property shall provide an information about the actual utilization of the capacity within this storage pool. For property details, see Capacity v1.0.0).
Oddata id string road write	Fully or partially consumed storage from a source resource. Each entry shall provide capacity allocation data from a named source resource.
@odata.id string read-write	Link to a CapacitySource resource. See the Links section and the <i>CapacitySource</i> schema for details.

}]

Property	Туре	Attributes	Notes
ClassesOfService {	object		This property shall contain references to all classes of service supported by this storage pool. Capacity allocated from this storage pool shall conform to one of the referenced classes of service. Contains a link to a resource.
@odata.id	string	read-write	Link to Collection of <i>LineOfService</i> . See the LineOfService schema fo details.
Compressed v1.3+, deprecated v1.6	boolea	n read-write (null)	This property shall contain a boolean indicator if the StoragePool is currently utilizing compression or not. Deprecated in v1.6 and later. This property has been deprecated in favor of the IsCompressed and DefaultCompression Behavior properties.
CompressionEnabled (v1.6+)	boolea	n read-only (null)	The property shall indicate whether or not compression is enabled on the storage pool.

Property	Type Attributes	Notes
Deduplicated (v1.3+, deprecated v1.6	boolean <i>read-write (nul</i>	I) This property shall contain a boolean indicator if the StoragePool is currently utilizing deduplication o not. Deprecated in v1.6 and later. This property has been deprecated in favor of the IsDeduplicated and DefaultDedupeBehavior properties.
DeduplicationEnabled (v1.6+)	boolean <i>read-only (null)</i>	The property shall indicate whether or not deduplication is enabled on the storage pool.
DefaultClassOfService (v1.2+) {	object	If present, this property shall reference the default class of service for entities allocated from this storage pool. If the ClassesOfService collection is not empty, then the value of this property shall be one of its entries. If not present the default class of service of the containing StorageService entity shall be used. See the <i>ClassOfService</i> schema for details on this property.

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
} DefaultCompressionBeha (v1.6+)	aviuo lea	n read-write (null)	If implemented, this property shall indicate the default dedupe behavior applied to the child resource (E.g., volume or storage pool) created out of the storage pool if the 'Compressed' property is not set on the create request.
DefaultDeduplicationBel (v1.6+)	n a bioo rlea	n read-write (null)	If implemented, this property shall indicate the default deduplication behavior applied to the child resource (E.g., volume or storage pool) created out of the storag pool if the 'Deduplicated property is not set on the create request.

Property	Туре	Attributes	Notes
DefaultEncryptionBeha (v1.6+)	viob oolea	n read-write (null)	If implemented, this property shall indicate the default dedupe behavior applied to the child resource (E.g., volume or storage pool) created out of the storage pool if the 'Encrypted' property is not set on the create request.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification
Encrypted (v1.3+, deprecated v1.6	boolea	n read-write (null)	This property shall contain a boolean indicator if the StoragePool is currently utilizing encryption or not. Deprecated in v1.6 and later. This property has been deprecated in favor of the IsEncrypted and DefaultEncryptionBe- havior properties.
EncryptionEnabled (v1.6+)	boolea	n read-only (null)	The property shall indicate whether or not encryption is enabled on the storage pool.

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value identifies this resource. The value shal be unique within the managed ecosystem. Fo property details, see Identifier v1.14.1).
IOStatistics (v1.2+) {}	object		The value shall represen IO statistics for this StoragePool. For property details, see IOStatistics.
Links {	object		The Links property, as described by the Redfish Specification, shall contain references to resources that are related to, but not contained by (subordinate to), this resource.

Property	Туре	Attributes	Notes
DedicatedSpareDrives (v1.2+) [{	array		The value of this property shall be a reference to the resources that this StoragePool is associated with and shall reference resources of type Drive. This property shall only contain references to Drive entities which are currently assigned as a dedicated spare and are able to support this StoragePool.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

}]

Property	Туре	Attributes	Notes
DefaultClassOfSer- vice {	object		If present, this property shall reference the default class of service for entities allocated from this storage pool. If the ClassesOfService collection is not empty, then the value of this property shall be one of its entries. If not present the default class of service of the containing StorageService entity shall be used. See the <i>ClassOfService</i> schema for details on this property.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification-described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
OwningStorageRe- source (v1.4+) {	object		This shall be a pointer to the Storage resource that owns or contains this StoragePool.
<pre>@odata.id }</pre>	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
SpareResourceSets (v1.2+) [{	array		Each referenced SpareResourceSet shall contain resources that may be utilized to replace the capacity provided by a failed resource having a compatible type.
@odata.id	string	read-write	Link to a SpareResourceSet resource. See the Links section and the <i>SpareResourceSet</i> schema for details.
}] }

Version 1.2.4

Property	Туре	Attributes	Notes
LowSpaceWarningThresh	oldPærce	ntsad-write	Each time the following
[]	(%)		value is less than one of
	(inte-		the values in the array
	ger,		the
	null)		LOW_SPACE_THRESHOLD_WARNING
			event shall be triggered:
			Across all
			CapacitySources entries,
			percent =
			(SUM(AllocatedBytes) -
			SUM(ConsumedBytes))/SUM(AllocatedByt
MaxBlockSizeBytes	integer	read-only(null)	If present, the value is the
(v1.1.1+)	(By)		maximum block size of
			an allocated resource. If
			the block size is unknown
			or if a block concept is
			not valid (for example,
			with Memory), this
			property shall be NULL.
Name	string	read-only	This property shall
		required	contain the name of this
			resource or array
			member. The value shall
			conform with the 'Name'
			clause of the Redfish
			Specification.
NVMeEnduranceGroupPro	peritiets	* (null)*	This property shall
(v1.4+) {			contain properties to use
			when StoragePool is used
			to describe an NVMe
			Endurance Group.
EndGrpLifetime	object	* (null)*	This property shall
-	-		contain any Endurance
(v1.4+) {			
(V1.4+) {			Group Lifetime

Property	Туре	Attributes	Notes
DataUnitsRead (v1.4+)	integer	read-only (null)	The property shall contain the total number of data units read from this endurance group. This value does not include controller reads due to internal operations such as garbage collection. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported
DataUnitsWritten (v1.4+)	integer	read-only (null)	The property shall contain the total number of data units written from this endurance group. This value does not include controller writes due to internal operations such as garbage collection. The value is reported in billions, where a value o 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported

Property	Туре	Attributes	Notes
EnduranceEstimate (v1.4+)	integer	read-only (null)	This property shall contain an estimate of the total number of data bytes that may be written to the Endurance Group over the lifetime of the Endurance Group assuming a write amplication of 1. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates endurance estimates are unsupported.
ErrorInformation- LogEntryCount (v1.4+)	integer	read-only (null)	This property shall contain the number of error information log entries over the life of the controller for the endurance group.
HostReadCom- mandCount (v1.4+)	integer	read-only (null)	This property shall contain the number of read commands completed by all controllers in the NVM subsystem for the Endurance Group. For the NVM command set, the is the number of compare commands and read commands.

Property	Туре	Attributes	Notes
HostWriteCom- mandCount (v1.4+)	integer	read-only (null)	This property shall contain the number of write commands completed by all controllers in the NVM subsystem for the Endurance Group. For the NVM command set, the is the number of compare commands and write commands.
MediaAndDataIn- tegrityErrorCount (v1.4+)	integer	read-only (null)	This property shall contain the number of occurences where the controller detected an unrecovered data integrity error for the Endurance Group. Error such as uncorrectable ECC, CRC checksum failure, or LBA tag mismatch are included i this field.

Property	Туре	Attributes	Notes
MediaUnitsWritten (v1.4+)	integer	read-only (null)	The property shall contain the total number of data units written from this endurance group. This value includes host and controller writes due to internal operations such as garbage collection. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported
PercentUsed (v1.4+)	integer	read-only (null)	This property shall contain a vendor-specific estimate of the percent life used for the endurance group based on the actual usage and the manufacturer prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the Endurance Group has been consumed, but may not indicate an NVM failure. According to the NVMe and JEDEC specs, the value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255.

Property	Туре	Attributes	Notes
}			
PredictedMediaL- ifeLeftPercent (v1.4+)	number (%)	r read-only(null)	This property shall contain an indicator of the percentage of life remaining in the drive's media.
}			
NVMeProperties (v1.6+) {	object	* (null)*	The property shall indicate the type of storage pool.
NVMePoolType (v1.6+)	string (enum)	read-only(null)	This property shall indicate whether the StoragePool is used as an EnduranceGroup or an NVMSet. <i>For the possible</i> <i>property values, see</i> <i>NVMePoolType in</i> <i>Property details.</i>
NVMeSetProperties (v1.4+) {	object	* (null)*	This property shall contain properties to use when StoragePool is used to describe an NVMe Set
EnduranceGroupI- dentifier (v1.4+)	string	read-only (null)	This property shall contain a 16-bit hex value that contains the endurance group identifier. The endurance group identifier is unique within a subsystem. Reserved values include 0. Pattern: ^0[xX](([a-fA-F]

Property	Туре	Attributes	Notes
OptimalWriteSize- Bytes (v1.4+)	integer (By)	read-only(null)	This property shall contain the Optimal Write Size in Bytes for this NVMe Set.
Ran- dom4kReadTypicalNanoS (v1.4+)	0	read-only (null)	This property shall contain the typical time to complete a 4k read in 100 nano-second units when the NVM Set is in a Predictable Latency Mode Deterministic Window and there is 1 outstanding command per NVM Set.
SetIdentifier (v1.4+)	string	read-only (null)	This property shall contain a 16-bit hex value that contains the NVMe Set group identifier. The NVM Set identifier is unique within a subsystem. Reserved values include 0. Patterns ^0[xX](([a-fA-F]
UnallocatedNVM- NamespaceCapacity- Bytes (v1.4+) }	integer (By)	read-only(null)	This property shall contain the unallocated capacity of the NVMe Set in bytes.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem
PoolType (v1.6+, deprecated v1.7 []	array (string (enum))	read-only(null))	Oem. The property shall indicate the type of storage pool. For the possible property values, see PoolType in Property details. Deprecated in v1.7 and later. This property has been deprecated in favor of the SupportedPoolTypes property.
RecoverableCapacitySour (v1.2+)	rciefCogent	: read-write (null)	The value is the number of available capacity source resources currently available in the event that an equivalent capacity source resource fails.
RemainingCapacityPerce (v1.1+)	nt nteger	read-only (null)	If present, this value shall return {[(SUM(AllocatedBytes) - SUM(ConsumedBytes)]/S represented as an integer value.

Property	Туре	Attributes	Notes
Status {}	object		The property shall contain the status of the StoragePool. For property details, see Status.
SupportedPoolTypes (v1.7+) []	array (string (enum)	read-only(null))	This collection shall contain all the PoolType values supported by the storage pool. <i>For the</i> <i>possible property values</i> <i>see SupportedPoolTypes</i> <i>in Property details.</i>
SupportedProvisioningP (v1.3+) []	olixies / (string (enum)	read-write(null))	This collection shall specify all supported storage allocation policies for the Storage Pool. For the possible property values, see SupportedProvisioning- Policies in Property details.
SupportedRAIDTypes (v1.3+)[]	array (string (enum)	read-only(null))	This collection shall contain all the RAIDType values supported by the storage pool. For the possible property values see SupportedRAIDTypes in Property details.

9.4.31.4 Actions

9.4.31.4.1 AddDrives ** Description **

This action shall be used to add a drive, or set of drives, to an underlying capacity source for the storage pool.

Action URI: {Base URI of target resource}/Actions/StoragePool.AddDrives

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 131.

Table 131: AddDrives action parameters

Parameter Name	Туре	Attributes	Notes
CapacitySource {	object	optional	This parameter shall contain the target capacity source for the drive(s). This property does not need to be specified if the storage pool only contains one capacity source, or i the implementation is capable of automatically selecting the appropriate capacity source. See the <i>CapacitySource</i> schema for details on this property.
@odata.id	string	read-only	Link to a CapacitySource resource. See the Links section and the <i>CapacitySource</i> schema for details.

Parameter Name	Туре	Attributes	Notes
Drives [{	array	required	This parameter shall contain the Uri to the existing drive or drives to be added to a capacity source of the storage pool. The implementation may impose restrictions on the number of drives added simultaneously.
<pre>@odata.id }]</pre>	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

9.4.31.4.2 RemoveDrives Description

This action shall be used to remove a drive from the StoragePool. This action is targeted at a graceful drive removal process, such as initiating a drive cleanup and data reallocation before drive removal from the pool. The implementation may impose restrictions on the number of drives removed simultaneously.

Action URI: {Base URI of target resource}/Actions/StoragePool.RemoveDrives

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 132.

Parameter Name	Туре	Attributes	Notes
Drives [{	array	required	This parameter shall contain the Uri to the drive or drives to be removed from the underlying capacity source.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

Table 132: RemoveDrives action parameters

9.4.31.4.3 SetCompressionState Description

This action shall be used to set the compression state of the storage pool. This may be both a highly impactful, as well as a long running operation.

Action URI: {Base URI of target resource}/Actions/StoragePool.SetCompressionState

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 133.

Parameter Name	Туре	Attributes	Notes
Enable	boolean	required	This property shall indicate the desired compression state of the storage pool.

Table 133: SetCompressionState action parameters

9.4.31.4.4 SetDeduplicationState Description

This action shall be used to set the dedupe state of the storage pool. This may be both a highly impactful, as well as a long running operation.

Action URI: {Base URI of target resource}/Actions/StoragePool.SetDeduplicationState

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 134.

 Table 134:
 SetDeduplicationState action parameters

Parameter Name	Туре	Attributes	Notes
Enable	boolean	required	This property shall indicate the desired deduplication state of the storage pool.

9.4.31.4.5 SetEncryptionState Description

This action shall be used to set the encryption state of the storage pool. This may be both a highly impactful, as well as a long running operation.

Action URI: {Base URI of target resource}/Actions/StoragePool.SetEncryptionState

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 135.

Parameter Name	Туре	Attributes	Notes
Enable	boolean	required	This property shall indicate the desired encryption state of the storage pool.

Table 135: SetEncryptionState action parameters

9.4.31.5 Property details

9.4.31.5.1 NVMePoolType: The defined property values are listed in Table 136. This property shall indicate whether the StoragePool is used as an EnduranceGroup or an NVMSet.

Table 136: NVMePoolType property values ##### PoolType:

string	Description
EnduranceGroup	This type shall be used to specify a pool of type EnduranceGroup, used by NVMe devices.
NVMSet	This type shall be used to specify a pool of type NVMSet, used by NVMe devices.

The defined property values are listed in Table 137. The property shall indicate the type of storage pool.

string	Description
Block	This type shall be used to specify a pool of type block. This is used when the pool serves block storage.
File	This type shall be used to specify a pool of type file. This setting is used when the pool serves file storage.
Object	This type shall be used to specify a pool of type object.

Table 137: PoolType property values ##### SupportedPoolTypes:

string	Description
Pool	This type shall be used to specify a pool of type pool. This setting is used to indicate a 'pool of pools' hierarchy.

The defined property values are listed in Table 138. This collection shall contain all the PoolType values supported by the storage pool.

Table 138: SupportedPoolTypes property values #####SupportedProvisioningPolicies:

string	Description
Block	This type shall be used to specify a pool of type block. This is used when the pool serves block storage.
File	This type shall be used to specify a pool of type file. This setting is used when the pool serves file storage.
Object	This type shall be used to specify a pool of type object.
Pool	This type shall be used to specify a pool of type pool. This setting is used to indicate a 'pool of pools' hierarchy.

The defined property values are listed in Table 139. This collection shall specify all supported storage allocation policies for the Storage Pool.

Table 139: SupportedProvisioningPolicies property values #####SupportedRAIDTypes:

string	Description
Fixed	This enumeration literal specifies storage shall be fully allocated.
Thin	This enumeration literal specifies storage may be over allocated.

The defined property values are listed in Table 140. This collection shall contain all the RAIDType values supported by the storage pool.

string	Description
None	A placement policy with no redundancy at the device level.
RAIDO	A placement policy where consecutive logical blocks of data are uniformly distributed across a set of independent storage devices without offering any form of redundancy. This is commonly referred to as data striping. This form of RAID will encounter data loss with the failure of any storage device in the set.
RAID00	A placement policy that creates a RAID 0 stripe set over two or more RAID 0 sets. This is commonly referred to as RAID 0+0. This form of data layout is not fault tolerant; if any storage device fails there will be data loss.
RAID01	A data placement policy that creates a mirrored device (RAID 1) over a set of striped devices (RAID 0). This is commonly referred to as RAID 0+1 or RAID 0/1. Data stored using this form of RAID is able to survive a single RAID 0 data set failure without data loss.
RAID1	A placement policy where each logical block of data is stored on more than one independent storage device. This is commonly referred to as mirroring. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID10	A placement policy that creates a striped device (RAID 0) over a set of mirrored devices (RAID 1). This is commonly referred to as RAID 1/0. Data stored using this form of RAID is able to survive storage device failures in each RAID 1 set without data loss.
RAID10E	A placement policy that uses a RAID 0 stripe set over two or more RAID 10 sets. This is commonly referred to as Enhanced RAID 10. Data stored using this form of RAID is able to survive a single device failure within each nested RAID 1 set without data loss.

Table 140: SupportedRAIDTypes property values

string	Description
RAID10Triple	A placement policy that uses a striped device (RAID 0) over a set of triple mirrored devices (RAID 1Triple). This form of RAID can survive up to two failures in each triple mirror set without data loss.
RAID1E	A placement policy that uses a form of mirroring implemented over a set of independent storage devices where logical blocks are duplicated on a pair of independent storage devices so that data is uniformly distributed across the storage devices. This is commonly referred to as RAID 1 Enhanced. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID1Triple	A placement policy where each logical block of data is mirrored three times across a set of three independent storage devices. This is commonly referred to as three-way mirroring. This form of RAID can survive two device failures without data loss.
RAID3	A placement policy using parity-based protection where logical bytes of data are uniformly distributed across a set of independent storage devices and where the parity is stored on a dedicated independent storage device. Data stored using this form of RAID is able to survive a single storage device failure without data loss. If the storage devices use rotating media, they are assumed to be rotationally synchronized, and the data stripe size should be no larger than the exported block size.
RAID4	A placement policy using parity-based protection where logical blocks of data are uniformly distributed across a set of independent storage devices and where the parity is stored on a dedicated independent storage device. Data stored using this form of RAID is able to survive a single storage device failure without data loss.

string	Description
RAID5	A placement policy using parity-based protection for storing stripes of 'n' logical blocks of data and one logical block of parity across a set of 'n+1' independent storage devices where the parity and data blocks are interleaved across the storage devices. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID50	A placement policy that uses a RAID 0 stripe set over two or more RAID 5 sets of independent storage devices. Data stored using this form of RAID is able to survive a single storage device failure within each RAID 5 set without data loss.
RAID6	A placement policy using parity-based protection for storing stripes of 'n' logical blocks of data and two logical blocks of independent parity across a set of 'n+2' independent storage devices where the parity and data blocks are interleaved across the storage devices. Data stored using this form of RAID is able to survive any two independent storage device failures without data loss.
RAID60	A placement policy that uses a RAID 0 stripe set over two or more RAID 6 sets of independent storage devices. Data stored using this form of RAID is able to survive two device failures within each RAID 6 set without data loss.
RAID6TP	A placement policy that uses parity-based protection for storing stripes of 'n' logical blocks of data and three logical blocks of independent parity across a set of 'n+3' independent storage devices where the parity and data blocks are interleaved across the storage devices. This is commonly referred to as Triple Parity RAID. Data stored using this form of RAID is able to survive any three independent storage device failures without data loss.

9.4.32 StoragePoolCollection

9.4.32.2 Properties The properties defined for the StoragePoolCollection schema are summarized in Table 141.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

Table 141: StoragePoolCollection properties

Туре	Attributes	Notes
array		The value of each member entry shall reference a StoragePool resource
string	read-only	Link to a StoragePool resource. See the Links section and the <i>StoragePool</i> schema for details.
tLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
	array string tLinkstring (URI)	array string <i>read-only</i> tLink string <i>read-only</i> (URI)

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.33 StorageReplicaInfo 1.3.0

9.4.33.1 Description This entity shall define the characteristics of a replica.

9.4.33.2 Properties The properties defined for the StorageReplicaInfo 1.3.0 schema are summarized in Table 142.

Table 142:	StorageReplicaInf	o 1.3.0 properties

Property	Туре	Attributes	Notes
Actions (v1.2+) {}	object		The Actions property shall contain the available actions for this resource.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification-described requirements. For property details, see Oem.

9.4.34 StorageService 1.5.0

9.4.34.1 Description Collection of resources that the system can make available to one or more host systems. The collection can contain: block, file, or object storage; local system access points through which the collection is made available; hosts, or host access points to which the collection is made available.

9.4.34.2 URIs /redfish/v1/StorageServices/{*StorageServiceId*} /redfish/v1/Systems/ {*ComputerSystemId*}/StorageServices/{*StorageServiceId*}

9.4.34.3 Properties The properties defined for the StorageService 1.5.0 schema are summarized in Table 143.

Property	Туре	Attributes	Notes
Actions {	object		The Actions property shall contain the available actions for this resource.
<pre>#StorageSer- vice.SetEncryptionKey {} }</pre>	object		This defines the name of the custom action supported on this resource. <i>For more</i> <i>information, see the</i> <i>Actions section below.</i>
ClassesOfService {	object		The value of each entry in the array shal reference a ClassOfService supported by this service. Contains a lin to a resource.
@odata.id	string	read-write	Link to Collection of <i>LineOfService</i> . See the LineOfService schema for details.
} ClientEndpointGroups {}	object		The value of each entry in the array shal reference an EndpointGroup.

Table 143: StorageService 1.5.0 properties	
--	--

Property	Туре	Attributes	Notes
ConsistencyGroups (v1.3+) {	object		The value of each entry in the array shall reference a ConsistencyGroup. Contains a link to a resource.
@odata.id	string	read-write	Link to Collection of <i>ConsistencyGroup</i> . See the ConsistencyGroup schema for details.
DataProtectionLoSCapabilitie (v1.2+) {	s object		The value shall reference the data protection capabilities of this service. See the <i>DataProtection-</i> <i>LoSCapabilities</i> schema for details on this property.
@odata.id	string	read-write	Link to a DataProtec- tionLoSCapabilities resource. See the Links section and the <i>DataProtection- LoSCapabilities</i> schema for details.
<pre>} DataSecurityLoSCapabilities (v1.2+) {</pre>	object		The value shall reference the data security capabilities of this service. See the <i>DataSecurityLoSCapa-</i> <i>bilities</i> schema for details on this property.

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a DataSecurity- LoSCapabilities resource. See the Links section and the <i>DataSecurityLoSCapa- bilities</i> schema for details.
DataStorageLoSCapabilities (v1.2+) {	object		The value shall reference the data storage capabilities of this service. See the <i>DataStorageLoSCapa-</i> <i>bilities</i> schema for details on this property.
@odata.id	string	read-write	Link to a DataStor- ageLoSCapabilities resource. See the Links section and the <i>DataS-</i> <i>torageLoSCapabilities</i> schema for details.

Property	Туре	Attributes	Notes
DefaultClassOfService (v1.2+) {	object		If present, this property shall reference the default class of service for entities allocated by this storage service. This default may be overridden by the DefaultClassOfService property values withir contained StoragePools. See the <i>ClassOfService</i> schema for details on this property.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
} Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Drives {}	object		A collection that indicates all the drives managed by this storage service.

Property	Туре	Attributes	Notes
EndpointGroups {}	object		The value of each entry in the array shal reference an EndpointGroup.
Endpoints {}	object		The value of each entry in the array shal reference an Endpoint managed by this service.
FileSystems {	object		An array of references to FileSystems managed by this storage service. Contains a link to a resource.
@odata.id	string	read-write	Link to Collection of <i>FileSystem</i> . See the FileSystem schema for details.
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifier {}	object		The value identifies this resource. The value shall be unique within the managed ecosystem. For property details, see Identifier v1.14.1).

	The value shall reference the IO connectivity
	capabilities of this service. See the <i>IOConnectivity-</i> <i>LoSCapabilities</i> schema for details on this property.
read-write	Link to a IOConnectiv ityLoSCapabilities resource. See the Link section and the <i>IOConnectivity- LoSCapabilities</i> schema for details.
	The value shall
	reference the IO performance capabilities of this service. See the <i>IOPerfor-</i> <i>manceLoSCapabilities</i> schema for details on this property.
read-write	Link to a IOPerfor- manceLoSCapabilitie resource. See the Link section and the <i>IOPerfor-</i> <i>manceLoSCapabilities</i> schema for details.

Property	Туре	Attributes	Notes
IOStatistics (v1.2+) {}	object		The value shall represent IO statistics for this StorageService For property details, see IOStatistics.
LinesOfService (v1.4+) [{	array		The value of each entry shall reference a LineOfService collection defined for this service.
@odata.id	string	read-write	Link to Collection of <i>LineOfService</i> . See the LineOfService schema for details.
}]			
Links {	object		This property shall contain links to other resources that are related to this resource.
DataProtectionLoSCapa- bilities {	object		The value shall reference the data protection capabilities of this service. See the <i>DataProtection-</i> <i>LoSCapabilities</i> schema for details on this property.
@odata.id	string	read-write	Link to a DataProtec- tionLoSCapabilities resource. See the Links section and the <i>DataProtection- LoSCapabilities</i> schema for details.

Property	Туре	Attributes	Notes
}			
DataSecurityLoSCapabili- ties {	object		The value shall reference the data security capabilities o this service. See the <i>DataSecurityLoSCapa-</i> <i>bilities</i> schema for details on this property.
@odata.id	string	read-write	Link to a DataSecurity LoSCapabilities resource. See the Links section and the <i>DataSecurityLoSCapa- bilities</i> schema for details.
DataStorageLoSCapabili- ies {	object		The value shall reference the data storage capabilities of this service. See the <i>DataStorageLoSCapa-</i> <i>bilities</i> schema for details on this property.
@odata.id	string	read-write	Link to a DataStor- ageLoSCapabilities resource. See the Links section and the <i>DataS</i> <i>torageLoSCapabilities</i> schema for details.

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
DefaultClassOfService {	object		If present, this property shall reference the default class of service for entities allocated by this storage service. This default may be overridden by the DefaultClassOfService property values within contained StoragePools. See the <i>ClassOfService</i> schem for details on this property.
@odata.id	string	read-write	Link to a ClassOfService resource. See the Link section and the <i>ClassOfService</i> schem for details.
} HostingSystem {}	object		The value shall reference the ComputerSystem or StorageController tha hosts this service.

	_		
Property	Туре	Attributes	Notes
IOConnectivityLoSCapa- bilities {	object		The value shall reference the IO connectivity capabilities of this service. See the <i>IOConnectivity-</i> <i>LoSCapabilities</i> schema for details on this property.
@odata.id }	string	read-write	Link to a IOConnectiv- ityLoSCapabilities resource. See the Links section and the <i>IOConnectivity- LoSCapabilities</i> schema for details.
IOPerformanceLoSCapa- bilities {	object		The value shall reference the IO performance capabilities of this service. See the <i>IOPerfor-</i> <i>manceLoSCapabilities</i> schema for details on this property.
@odata.id }	string	read-write	Link to a IOPerfor- manceLoSCapabilities resource. See the Links section and the <i>IOPerfor- manceLoSCapabilities</i> schema for details.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.

Property	Туре	Attributes	Notes
Redundancy [{	array		This collection shall contain the redundancy information for the storage subsystem.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
] ServerEndpointGroups {}	object		The value of each entry in the array sha reference a EndpointGroup.
SpareResourceSets (v1.2+) [{	array		Each contained SpareResourceSet shall contain resource that may be utilized t replace the capacity provided by a failed resource having a compatible type.
@odata.id	string	read-write	Link to a SpareResourceSet resource. See the Link section and the <i>SpareResourceSet</i> schema for details.

}]

Property	Туре	Attributes	Notes
Status {}	object		The property shall contain the status of the StorageService. For property details, see Status.
StorageGroups {	object		The value of each entry in the array shal reference a StorageGroup. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StorageGroup</i> . See the StorageGroup schema for details.
} StoragePools {	object		An array of references to StoragePools. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StoragePool</i> . See the StoragePool schema for details.
<pre>} StorageSubsystems (v1.0.1+) {}</pre>	object		The value shall be a link to a collection of type StorageCollectior having members that represent storage subsystems managed by this storage service

Property	Туре	Attributes	Notes
Volumes {	object		An array of references to Volumes managed by this storage service Contains a link to a resource.
@odata.id	string	read-write	Link to Collection of <i>Volume</i> . See the Volume schema for details.

9.4.34.4 Actions

9.4.34.4.1 SetEncryptionKey Description

This defines the name of the custom action supported on this resource.

Action URI: {Base URI of target resource}/Actions/StorageService.SetEncryptionKey

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 144.

Table 144: SetEncryptionKey action parameters

Parameter Name	Туре	Attributes	Notes
EncryptionKey	string	optional	This defines the property name for the action.

9.4.34.5 Property details

9.4.34.5.1 idRef:

@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it
			shall be of the form defined in the Redfish specification.

9.4.35 StorageServiceCollection

9.4.35.1 URIs /redfish/v1/StorageServices /redfish/v1/Systems/{*ComputerSystemId*}/StorageServices

9.4.35.2 Properties The properties defined for the StorageServiceCollection schema are summarized in Table 146.

 Table 146:
 StorageServiceCollection properties

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a StorageService resource.
@odata.id	string	read-only	Link to a StorageService resource. See the Links section and the <i>StorageService</i> schema for details.

Swordfish Scalable Storage Management API Specification

Property	Туре	Attributes	Notes
}]			
Members@odata.ı	nextLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All value for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.36 StorageSystemCollection

9.4.36.1 URIs /redfish/v1/StorageSystems

9.4.36.2 Properties The properties defined for the StorageSystemCollection schema are summarized in Table 147.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a ComputerSystem resource that shall have a HostingRoles entry with a value of 'StorageServer'.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}]			

Table 147: StorageSystemCollection p	properties
--------------------------------------	------------

Property	Туре	Attributes	Notes
Members@odata.	nextLink string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.

9.4.37 Volume 1.8.0

9.4.37.1 Description This resource shall be used to represent a volume, virtual disk, logical disk, LUN, or other logical storage for a Redfish implementation.

9.4.37.2 URIs /redfish/v1/CompositionService/ResourceBlocks/{Resource-BlockId}/Storage/{StorageId}/Volumes/{VolumeId} /redfish/v1/CompositionService/ ResourceBlocks/{ResourceBlockId}/Systems/{ComputerSystemId}/Storage/{StorageId}/Volumes/{VolumeId} /redfish/v1/ResourceBlocks/{ResourceBlockId}/Storage/ {StorageId}/Volumes/{VolumeId} /redfish/v1/ResourceBlocks/{ResourceBlockId}/ Systems/{ComputerSystemId}/Storage/{StorageId}/Volumes/{VolumeId} /redfish/v1/ Storage/{StorageId}/ConsistencyGroups/{ConsistencyGroupId}/Volumes/{VolumeId} /redfish/v1/Storage/{StorageId}/FileSystems/{FileSystemId}/CapacitySources/ {CapacitySourceId}/ProvidingVolumes/{VolumeId} /redfish/v1/Storage/{StorageId}/ StoragePools/{StoragePoolId}/AllocatedVolumes/{VolumeId} /redfish/v1/Storage/ {StorageId}/StoragePools/{StoragePoolId}/CapacitySources/{CapacitySourceId}/ ProvidingVolumes/{VolumeId} /redfish/v1/Storage/{StorageId}/Volumes/{VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/ConsistencyGroups/{ConsistencyGroupId}/Volumes/{VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/ FileSystems/{FileSystemId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes/ {VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/StoragePools/{Storage-PoolId//AllocatedVolumes/{VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/ StoragePools/{StoragePoolId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes/{VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/Volumes/{VolumeId} /redfish/v1/StorageServices/{StorageServiceId}/Volumes/{VolumeId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes/{ProvidingVolumeId} /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/ConsistencyGroups/{ConsistencyGroupId}/Volumes/{VolumeId} /redfish/v1/Systems/{ComputerSystemId}/Storage/ {StorageId}/FileSystems/{FileSystemId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes/{VolumeId} /redfish/v1/Systems/{ComputerSystemId}/Storage/ {StorageId}/StoragePools/{StoragePoolId}/AllocatedVolumes/{VolumeId} /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/{StoragePoolId}/ CapacitySources/{CapacitySourceId}/ProvidingVolumes/{VolumeId} /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/Volumes/{VolumeId}

9.4.37.3 Properties The properties defined for the Volume 1.8.0 schema are summarized in Table 148.

Table 148:	Volume 1.8.0) properties

Property	Туре	Attributes	Notes
AccessCapabilities (v1.1+)	array (string (enum)	read-write(null))	Each entry shall specify a current storage access capability. For the possible property values, see AccessCapabilities in Property details.
Actions {	object		The Actions property shall contain the available actions for this resource.
#Vol- ume.AssignReplicaTarget (v1.4+) {}	object		This action shall be used to establish a replication relationship by assigning an existing volume to serve as a target replica for an existing source volume. <i>For more information,</i> <i>see the Actions section</i> <i>below.</i>

Property	Туре	Attributes	Notes
#Vol- ume.ChangeRAIDLayout (v1.5+) {}	object		This action shall request the system to change the RAID layout of the volume. Depending on the combination of the submitted parameters, this could be changing the RAID type, changing the span count, changing the number of drives used by the volume, or another configuration change supported by the system. Note that usage of this action while online may potentially cause data loss if the available capacity is reduced. For more information, see the Actions section below.
#Vol- ume.CheckConsistency {}	object		This defines the name of the custom action supported on this resource. <i>For more</i> <i>information, see the</i> <i>Actions section below.</i>

Property	Туре	Attributes	Notes
#Vol- ume.CreateReplicaTarget (v1.4+) {}	object		This action shall be used to create a new volume resource to provide expanded data protection through a replica relationship with the specified source volume. For more information, see the Actions section below.
#Volume.ForceEnable (v1.5+) {}	object		This action shall request the system to force the volume to enabled state regardless of data loss scenarios. <i>For more</i> <i>information, see the</i> <i>Actions section below.</i>
#Volume.Initialize (v1.5+) {}	object		This defines the name of the custom action supported on this resource. If InitializeMethod is not specified in the request body, but the property InitializeMethod is specified, the property InitializeMethod value should be used. If neither is specified, the InitializeMethod should be Foreground. <i>For</i> <i>more information, see</i> <i>the Actions section</i> <i>below.</i>

Property	Type Attributes	Notes
#Vol- ume.RemoveRepl (v1.4+) {}	object icaRelationship	This action shall be used to disable data synchronization between a source and target volume, remove the replication relationship, and optionally delete the target volume. For mor- information, see the Actions section below.
#Vol- ume.ResumeRepl (v1.4+) {}	object ication	This action shall be used to resume the active data synchronization between a source and target volume, without otherwise altering the replication relationship <i>For more information,</i> <i>see the Actions section</i> <i>below.</i>
#Vol- ume.ReverseRepli (v1.4+) {}	object icationRelationship	This action shall be used to reverse the replication relationship between a source and target volume. For more information, see the Actions section below.

Property	Туре	Attributes	Notes
#Vol- ume.SplitReplication (v1.4+) {}	object		This action shall be used to split the replication relationship and suspend data synchronization between a source and target volume. <i>For more</i> <i>information, see the</i> <i>Actions section below.</i>
#Vol- ume.SuspendReplication (v1.4+) {}	object		This action shall be used to suspend active data synchronization between a source and target volume, without otherwise altering the replication relationship For more information, see the Actions section below.
} AllocatedPools (v1.1+) {	object		The value of this property shall contain references to all storage pools allocated from this volume. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StoragePool</i> . See the StoragePool schema for details.

Property	Туре	Attributes	Notes
BlockSizeBytes	integer (By)	read-only(null)	This property shall contain size of the smallest addressable unit of the associated volume.
Capacity (v1.1+) {}	object		Information about the utilization of capacity allocated to this storage volume. For property details, see Capacity v1.0.0).
CapacityBytes	integer (By)	read-write(null)	This property shall contain the size in byte of the associated volume.
CapacitySources (v1.1+) [{	array		Fully or partially consumed storage from a source resource. Each entry provides capacity allocation information from a named source resource.
@odata.id	string	read-write	Link to a CapacitySource resource. See the Links section and the <i>CapacitySource</i> schema for details.
}]	. .		
Compressed (v1.4+)	boolear	n read-write (null)	This property shall contain a boolean indicator if the Volume is currently utilizing compression or not.

Property	Туре	Attributes	Notes
Deduplicated (v1.4+)	boolea	n read-write (null)	This property shall contain a boolean indicator if the Volume is currently utilizing deduplication or not.
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
DisplayName (v1.4+)	string	read-write (null)	This property shall contain a user-configurable string to name the volume.
Encrypted	boolea	n read-write (null)	This property shall contain a boolean indicator if the Volume is currently utilizing encryption or not.
EncryptionTypes []	array (string (enum)	read-write)	This property shall contain the types of encryption used by thi Volume. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>EncryptionTypes in</i> <i>Property details.</i>

Property	Туре	Attributes	Notes
Id	string	read-only required	This property shall contain the identifier for this resource. The value shall conform with the 'Id' clause of the Redfish Specification.
Identifiers [{ }]	array (object)		This property shall contain a list of all known durable names for the associated volume. For property details, see Identifier v1.14.1).
InitializeMethod (v1.6+)	string (enum)	read-only(null)	This property shall indicate the initialization method used for this volume. If InitializeMethod is not specified, the InitializeMethod should be Foreground. This value reflects the most recently used Initialization Method, and may be changed using the Initialize Action. For the possible property values, see InitializeMethod in Property details.
IOPerfModeEnabled (v1.5+)	boolear	n read-write (null)	This property shall indicate whether IO performance mode is enabled for the volume

Property	Type Attributes	Notes
IOStatistics (v1.2+) {}	object	The value shall represent IO statistics for this volume. For property details, see IOStatistics.
IsBootCapable (v1.7+)	boolean <i>read-write (null)</i>	This property shall indicate whether or no the Volume contains a boot image and is capable of booting. This property may be settable by an admin o client with visibility inte the contents of the volume. This property should only be set to true when VolumeUsage is either not specified, or when VolumeUsage is set to Data or SystemData.
Links {	object	The Links property, as described by the Redfish Specification, shall contain references to resources that are related to, but not contained by (subordinate to), this resource.

Property	Туре	Attributes	Notes
CacheDataVolumes (v1.6+) [{	array		This shall be a pointer to the cache data volumes this volume serves as a cache volume. The corresponding VolumeUsage property shall be set to CacheOnly when this property is used.
@odata.id	string	read-only	Link to another Volume resource.
<pre>}] CacheVolumeSource (v1.6+) {</pre>	object	* (null)*	This shall be a pointer to the cache volume source for this volume. The corresponding VolumeUsage property shall be set to Data when this property is used.
@odata.id	string	read-only	Link to another Volumo resource.
} ClassOfService (v1.1+) {	object		This property shall contain a reference to the ClassOfService that this storage volume conforms to. See the <i>ClassOfService</i> schema for details on this property.

Property	Туре	Attributes	Notes
@odata.id	string	read-only	Link to a ClassOfService resource. See the Links section and the <i>ClassOfService</i> schema for details.
ClientEndpoints (v1.4+)	array		The value of this property shall be references to the client Endpoints this volume is associated with.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
<pre>}] ConsistencyGroups (v1.4+) [{</pre>	array		The value of this property shall be references to the ConsistencyGroups this volume is associated
@odata.id	string	read-only	with. Link to a ConsistencyGroup resource. See the Links section and the <i>ConsistencyGroup</i> schema for details.
}]			

Property	Туре	Attributes	Notes
DedicatedSpareDrives (v1.2+) [{	array		The value of this property shall be a reference to the resources that this volume is associated with and shall reference resources of type Drive This property shall only contain references to Drive entities which are currently assigned as a dedicated spare and are able to support this Volume.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

}]

Property	Туре	Attributes	Notes
Drives [{	array		The value of this property shall be a reference to the resources that this volume is associated with and shall reference resources of type Drive This property shall only contain references to Drive entities which are currently members of the Volume, not hot spare Drives which are not currently a membe of the volume.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}] JournalingMedia (v1.5+) {	object	* (null)*	This shall be a pointer to the journaling media used for this Volume to address the write hole issue. Valid when Write HoleProtectionPolicy property is set to 'Journaling'.

Property	Туре	Attributes	Notes
@odata.id }	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.
OwningStorageRe- source (v1.5+) {	object		This shall be a pointer to the Storage resource that owns or contains this volume.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.

Property	Туре	Attributes	Notes
OwningStorageService (v1.4+) {	object		This shall be a pointer to the StorageService that owns or contains this volume. See the <i>StorageService</i> schema for details on this property.
@odata.id	string	read-only	Link to a StorageService resource. See the Links section and the <i>StorageService</i> schema for details.
} ServerEndpoints (v1.4+) [{	array		The value of this property shall be references to the server Endpoints this volume is associated with.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
SpareResourceSets (v1.3+) [{	array		Each referenced SpareResourceSet shall contain resources that may be utilized to replace the capacity provided by a failed resource having a compatible type.

Swordfish Scalable Storage Management A	API Specification

Property	Туре	Attributes	Notes
@odata.id	string	read-write	Link to a SpareResourceSet resource. See the Links section and the <i>SpareResourceSet</i> schema for details.
StorageGroups (v1.4+) [array		The value of this property shall be references to the StorageGroups this volume is associated with.
@odata.id	string	read-only	Link to a StorageGroup resource. See the Links section and the <i>StorageGroup</i> schema for details.
}]			
} LogicalUnitNumber (v1.4+)	integer	read-only (null)	This property shall contain host-visible LogicalUnitNumber assigned to this Volume This property shall only be used when in a single connect configuration and no StorageGroup configuration is used.

Version 1.2.4

Property	Туре	Attributes	Notes
LowSpaceWarningThresh	old Person	Each time the following	
(v1.1+) []	(%)		value is less than one of
	(inte-		the values in the array
	ger,		the
	null)		LOW_SPACE_THRESHOLD_WARNING event shall be triggered:
			Across all
			CapacitySources
			entries, percent =
			(SUM(AllocatedBytes) -
			SUM(ConsumedBytes))/SUM(AllocatedBytes
Manufacturer (v1.1+)	string	read-only (null)	This property shall
			contain a value that
			represents the
			manufacturer or
			implementer of the
			storage volume.
MaxBlockSizeBytes	integer	read-only(null)	This property shall
(v1.1+)	(By)	• • •	contain size of the
	-		largest addressable
			unit of this storage
			volume.
MediaSpanCount (v1.4+)	integer	read-only (null)	This property shall
······································			indicate the number of
			media elements used
			per span in the
			secondary RAID for a
			hierarchical RAID type.
Medel (v1 1)	ctripg	road only (null)	
Model (v1.1+)	string	read-only (null)	The value is assigned by the manufacturer and
			shall represents a
			specific storage volume
			implementation.

Property	Туре	Attributes	Notes
Name	string	read-only required	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
NVMeNamespaceProperties (v1.5+) {	s object	* (null)*	This property shall contain properties to use when Volume is used to describe an NVMe Namespace.
FormattedLBASize (v1.5+)	string	read-only (null)	This property shall contain the LBA data size and metadata size combination that the namespace has been formatted with. This is a 4-bit data structure.
IsShareable (v1.5+)	boolear	n read-write (null)	This property shall indicate whether the namespace is shareable.
LBAFormatsSupported (v1.8+) []	array (string (enum))	read-only(null)	This shall be a list of the LBA formats supported for the namespace, or potential namespaces. For the possible property values, see LBAFormatsSupported in Property details.

Property	Туре	Attributes	Notes
MetadataTransferre- dAtEndOfDataLBA (v1.5+)	boolea	n read-only (null)	This property shall indicate whether or not the metadata is transferred at the end of the LBA creating an extended data LBA.
NamespaceFeatures (v1.5+) {	object	* (null)*	This property shall contain a set of Namespace Features.
SupportsAtomic- TransactionSize (v1.5+)	boolea	n read-only (null)	This property shall indicate whether or not the NVM fields for Namespace preferred write granularity (NPWG), write alignment (NPWA), deallocate granularity (NPDG), deallocate alignment (NPDA) and optimal write size (NOWS) are defined for this namespace and should be used by the host for I/O optimization.
SupportsDeallocate- dOrUnwrittenLBError (v1.5+)	boolea	n read-only (null)	This property shall indicate that the controller supports deallocated or unwritten logical block error for this namespace.

Swordfish Scalable Storage Management API Spec	ification
--	-----------

Property	Туре	Attributes	Notes
SupportsIOPerfor- manceHints (v1.5+)	boolea	n read-only (null)	This property shall indicate that the Namespace Atomic Write Unit Normal (NAWUN), Namespace Atomic Write Unit Power Fail (NAWUPF), and Namespace Atomi Compare and Write Unit (NACWU) fields ar defined for this namespace and should be used by the host for this namespace instea of the controller-level properties AWUN, AWUPF, and ACWU.
SupportsNGUIDReuse (v1.5+)	boolea	n read-only (null)	This property shall indicate that the namespace supports the use of an NGUID (namespace globally unique identifier) value
SupportsThinProvi- sioning (v1.5+)	boolear	n read-only (null)	This property shall indicate whether or no the NVMe Namespace supports thin provisioning. Specifically, the namespace capacity reported may be less than the namespace size.

Property	Туре	Attributes	Notes
Namespaceld (v1.5+)	string	read-only (null)	This property shall contain the NVMe Namespace Identifier for this namespace. This property shall be a hex value. Namespace identifiers are not durable and do not have meaning outside the scope of the NVMe subsystem. NSID 0x0, 0xFFFFFFFF, 0xFFFFFFFF, 0xFFFFFFFF are specia purpose values. Pattern: ^0[xX](([a-fA-F
NumberLBAFormats (v1.5+)	integer (By)	read-only(null)	This property shall contain the number of LBA data size and metadata size combinations supported by this namespace. The value of this property is between 0 and 16. LBA formats with an index set beyond this value will not be supported.
NVMeVersion (v1.5+)	string	read-only (null)	This property shall contain the version of the NVMe Base Specification supported.

Property	Туре	Attributes	Notes
Oem {}	object		This property shall contain the OEM extensions. All values for properties that this object contains shall conform to the Redfish Specification- described requirements. For property details, see Oem.
Operations [{	array		This property shall contain a list of all currently running on the Volume.
AssociatedFeatures- Registry {	object		This resource shall be used to represent a Feature registry for a Redfish implementation. See the <i>FeaturesRegistry</i> schema for details on this property.
@odata.id	string	read-only	Link to a FeaturesRegistry resource. See the Links section and the <i>FeaturesRegistry</i> schema for details.
}			
OperationName	string	read-only (null)	The name of the operation.
PercentageComplete	integer	read-only (null)	The percentage of the operation that has beer completed.

Property	Туре	Attributes	Notes
}]			
OptimumIOSizeBytes	integer (By)	read-only(null)	This property shall contain the optimum IO size to use when performing IO on this volume. For logical disks, this is the stripe size. For physical disks, this describes the physical sector size.
ProvisioningPolicy (v1.4+)	string (enum)	read-write(null)	This property shall specify the volume's supported storage allocation policy. <i>For</i> <i>the possible property</i> <i>values, see</i> <i>ProvisioningPolicy in</i> <i>Property details.</i>
RAIDType (v1.3.1+)	string (enum)	read-only(null)	This property shall contain the RAID type of the associated Volume. <i>For the</i> <i>possible property</i> <i>values, see RAIDType in</i> <i>Property details.</i>
ReadCachePolicy (v1.4+)	string (enum)	read-write(null)	This property shall contain a boolean indicator of the read cache policy for the Volume. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>ReadCachePolicy in</i> <i>Property details.</i>

Version 1.2.4

Property	Туре	Attributes	Notes	
RecoverableCapacitySource (v1.3+)	e Cichage r	read-write (null)	The value is the number of available capacity source resources currently available in the event that an equivalent capacity source resource fails.	
RemainingCapacityPercent (v1.2+)	integer	read-only (null)	If present, this value shall return {[(SUM(AllocatedBytes) - SUM(ConsumedBytes)]/S represented as an integer value.	SUM(AllocatedBytes)}*100
ReplicaInfo (v1.1+) {}	object		This property shall describe the replica relationship between this storage volume and a corresponding source volume. For property details, see Replicalnfo v1.3.0).	
ReplicaTargets (v1.3+) [{	array		The value shall reference the target replicas that are sourced by this replica.	
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.	
}]				

Property	Туре	Attributes	Notes
Status {}	object		The property shall contain the status of the Volume. For property details, see Status.
StorageGroups (v1.1+) {	object		The value of this property shall contain references to all storage groups that include this volume. Contains a link to a resource.
@odata.id	string	read-only	Link to Collection of <i>StorageGroup</i> . See the StorageGroup schema for details.
} StripSizeBytes (v1.4+)	integer (By)	read-write(null)	The number of consecutively addressed virtual disk blocks (bytes) mapped to consecutively addressed blocks on a single member extent of a disk array. Synonym for stripe depth and chunk size.
VolumeType	string (enum)	read-only(null)	This property shall contain the type of the associated Volume. For the possible property values, see VolumeType in Property details.

Property	Туре	Attributes	Notes
VolumeUsage (v1.4+)	string (enum)	read-only(null)	This property shall contain the volume usage type for the Volume. For the possible property values, see VolumeUsage in Property details.
WriteCachePolicy (v1.4+)	string (enum)	read-write(null)	This property shall contain a boolean indicator of the write cache policy for the Volume. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>WriteCachePolicy in</i> <i>Property details.</i>
WriteCacheState (v1.4+)	string (enum)	read-only(null)	This property shall contain the WriteCacheState policy setting for the Volume. For the possible property values, see WriteCacheState in Property details.

Property	Туре	Attributes	Notes
WriteHoleProtectionPolicy (v1.4+)	string (enum)	read-write	This property specifies the policy that is enabled to address the write hole issue on the RAID volume. If no policy is enabled at the moment, this property shall be set to 'Off'. For the possible property values, see Write- HoleProtectionPolicy in Property details.

9.4.37.4 Actions

9.4.37.4.1 AssignReplicaTarget v1.4+ Description

This action shall be used to establish a replication relationship by assigning an existing volume to serve as a target replica for an existing source volume.

Action URI: {Base URI of target resource}/Actions/Volume.AssignReplicaTarget

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 149.

Parameter Name	Туре	Attributes	Notes
ReplicaType	string (enum)	required	This parameter shall contain the type of replica relationship to be created (e.g., Clone, Mirror, Snap). For the possible property values, see ReplicaType in Property details.
ReplicaUpdateMode	string (enum)	required	This parameter shall specify the replica update mode. <i>For</i> <i>the possible</i> <i>property values, see</i> <i>ReplicaUpdateMode</i> <i>in Property details.</i>
TargetVolume	string	required	This parameter shall contain the Uri to the existing target volume.

Table 149: AssignReplicaTarget action parameters

9.4.37.4.2 ChangeRAIDLayout (v1.5+) Description

This action shall request the system to change the RAID layout of the volume. Depending on the combination of the submitted parameters, this could be changing the RAID type, changing the span count, changing the number of drives used by the volume, or another configuration change supported by the system. Note that usage of this action while online may potentially cause data loss if the available capacity is reduced.

Action URI: {Base URI of target resource}/Actions/Volume.ChangeRAIDLayout

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 150.

Parameter Name	Туре	Attributes	Notes
Drives [{	array	optional	This parameter shall contain an array of the drives to be used by the volume.
@odata.id	string (URI)	read-only	The value of this property shall be the unique identifier for the resource and it shall be of the form defined in the Redfish specification.
}]			
MediaSpanCount	integer	optional	This parameter shall contain the requested number of media elements used per span in the secondary RAID for a hierarchical RAID type.
RAIDType	string (enum)	optional	This parameter shall contain the requested RAID type for the volume. <i>For</i> <i>the possible</i> <i>property values, see</i> <i>RAIDType in Property</i> <i>details.</i>

Table 150: ChangeRAIDLayout action parameters

Parameter Name	Туре	Attributes	Notes
StripSizeBytes	integer	optional	This parameter shall contain the number of blocks (bytes) requested for the strip size.

9.4.37.4.3 CheckConsistency Description

This defines the name of the custom action supported on this resource.

Action URI: {Base URI of target resource}/Actions/Volume.CheckConsistency

Action parameters

This action takes no parameters.

9.4.37.4.4 CreateReplicaTarget (v1.4+) Description

This action shall be used to create a new volume resource to provide expanded data protection through a replica relationship with the specified source volume.

Action URI: {Base URI of target resource}/Actions/Volume.CreateReplicaTarget

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 151.

Parameter Name	Туре	Attributes	Notes
ReplicaType	string (enum)	required	This parameter shall contain the type of replica relationship to be created (e.g., Clone, Mirror, Snap) For the possible property values, see ReplicaType in Property details.
ReplicaUpdateMode	string (enum)	required	This parameter shall specify the replica update mode. <i>For</i> <i>the possible</i> <i>property values, see</i> <i>ReplicaUpdateMode</i> <i>in Property details.</i>
TargetStoragePool	string	required	This parameter shall contain the Uri to the existing StoragePool in which to create the target volume.
VolumeName	string	optional	This parameter shall contain the Name for the target volume.

Table 151: CreateReplicaTarget action parameters

9.4.37.4.5 ForceEnable (v1.5+) Description

This action shall request the system to force the volume to enabled state regardless of data loss scenarios.

Action URI: {Base URI of target resource}/Actions/Volume.ForceEnable

Action parameters

This action takes no parameters.

9.4.37.4.6 Initialize (v1.5+) Description

This defines the name of the custom action supported on this resource. If InitializeMethod is not specified in the request body, but the property InitializeMethod is specified, the property InitializeMethod value should be used. If neither is specified, the InitializeMethod should be Foreground.

Action URI: {Base URI of target resource}/Actions/Volume.Initialize

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 152.

Parameter Name	Туре	Attributes	Notes
InitializeMethod	string (enum)	optional	This defines the property name for the action. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>InitializeMethod in</i> <i>Property details.</i>
InitializeType	string (enum)	optional	This defines the property name for the action. <i>For the</i> <i>possible property</i> <i>values, see</i> <i>InitializeType in</i> <i>Property details.</i>

Table 152: Initialize action parameters

9.4.37.4.7 RemoveReplicaRelationship (v1.4+) Description

This action shall be used to disable data synchronization between a source and target volume, remove the replication relationship, and optionally delete the target volume.

Action URI: {Base URI of target resource}/Actions/Volume.RemoveReplicaRelationship

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 153.

Parameter Name	Туре	Attributes	Notes
DeleteTargetVolume	boolean	optional	This parameter shall indicate whether or not to delete the target volume as part of the operation. If not defined, the system should use its default behavior.
TargetVolume	string	required	This parameter shall contain the Uri to the existing target volume.

9.4.37.4.8 ResumeReplication (v1.4+) Description

This action shall be used to resume the active data synchronization between a source and target volume, without otherwise altering the replication relationship.

Action URI: {Base URI of target resource}/Actions/Volume.ResumeReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 154.

volume.

Parameter Name	Туре	Attributes	Notes
TargetVolume	string	required	This parameter shall contain the Uri to the
			existing target

Table 154: ResumeReplication action parameters

9.4.37.4.9 ReverseReplicationRelationship (v1.4+) Description

This action shall be used to reverse the replication relationship between a source and target volume.

Action URI: {Base URI of target resource}/Actions/Volume.ReverseReplicationRelationship

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 155.

Parameter Name	Туре	Attributes	Notes
TargetVolume	string	required	This parameter shall contain the Uri to the existing target volume.

 Table 155:
 ReverseReplicationRelationship action parameters

9.4.37.4.10 SplitReplication (v1.4+) Description

This action shall be used to split the replication relationship and suspend data synchronization between a source and target volume.

Action URI: {Base URI of target resource}/Actions/Volume.SplitReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 156.

Parameter Name	Туре	Attributes	Notes
TargetVolume	string	required	This parameter shall contain the Uri to the existing target volume.

9.4.37.4.11 SuspendReplication (v1.4+) Description

This action shall be used to suspend active data synchronization between a source and target volume, without otherwise altering the replication relationship.

Action URI: {Base URI of target resource}/Actions/Volume.SuspendReplication

Action parameters

The parameters for the action which are included in the POST body to the URI shown in the 'target' property of the Action are summarized in Table 157.

Table 157: SuspendReplication actio	n parameters
-------------------------------------	--------------

Parameter Name	Туре	Attributes	Notes
TargetVolume	string	required	This parameter shall contain the Uri to the existing target volume.

9.4.37.5 Property details

9.4.37.5.1 AccessCapabilities: The defined property values are listed in Table 158. Each entry shall specify a current storage access capability.

string	Description
Append	This enumeration literal shall indicate that the storage may be written only to append.
Execute	This value shall indicate that Execute access is allowed by the file share.
Read	This enumeration literal shall indicate that the storage may be read.
Streaming	This enumeration literal shall indicate that the storage may be read sequentially.
Write	This enumeration literal shall indicate that the storage may be written multiple times.
WriteOnce	This enumeration literal shall indicate that the storage may be written only once.

 Table 158: AccessCapabilities property values ##### EncryptionTypes:

The defined property values are listed in Table 159. This property shall contain the types of encryption used by this Volume.

string	Description
ControllerAssisted	The volume is being encrypted by the storage controller entity.
NativeDriveEncryption	The volume is utilizing the native drive encryption capabilities of the drive hardware.
SoftwareAssisted	The volume is being encrypted by software running on the system or the operating system.

The defined property values are listed in Table 160. This defines the property name for the action.

string	Description
Background	The volume will be available for use immediately, with data erasure and preparation to happen as background tasks.
Foreground	Data erasure and preparation tasks will complete before the volume is presented as available for use.
Skip	The volume will be available for use immediately, with no preparation.

Table 160: InitializeMethod property values ##### InitializeType:

The defined property values are listed in Table 161. This defines the property name for the action.

string	Description
Fast	The volume is prepared for use quickly, typically by erasing just the beginning and end of the space so that partitioning can be performed.
Slow	The volume is prepared for use slowly, typically by completely erasing the volume.

Table 161: InitializeType property values ##### LBAFormatsSupported:

The defined property values are listed in Table 162. This shall be a list of the LBA formats supported for the namespace, or potential namespaces.

string	Description
LBAFormat0	LBAFormat0 is a required type. Indicates the LBA data size supported.
LBAFormat1	Indicates the LBA data size if supported.
LBAFormat10	Indicates the LBA data size supported if supported.
LBAFormat11	Indicates the LBA data size supported if supported.

Table 162: LBAFormatsSupported property values ##### ProvisioningPolicy:

string	Description
LBAFormat12	Indicates the LBA data size supported if supported.
LBAFormat13	Indicates the LBA data size supported if supported.
LBAFormat14	Indicates the LBA data size supported if supported.
LBAFormat15	Indicates the LBA data size supported if supported.
LBAFormat2	Indicates the LBA data size supported if supported.
LBAFormat3	Indicates the LBA data size supported if supported.
LBAFormat4	Indicates the LBA data size supported if supported.
LBAFormat5	Indicates the LBA data size supported if supported.
LBAFormat6	Indicates the LBA data size supported if supported.
LBAFormat7	Indicates the LBA data size supported if supported.
LBAFormat8	Indicates the LBA data size supported if supported.
LBAFormat9	Indicates the LBA data size supported if supported.

The defined property values are listed in Table 163. This property shall specify the volume's supported storage allocation policy.

string	Description
Fixed	This enumeration literal specifies storage shall be fully allocated.
Thin	This enumeration literal specifies storage may be over allocated.

Table 163: ProvisioningPolicy property values ##### RAIDType:

The defined property values are listed in Table 164. This parameter shall contain the requested RAID type for the volume.

string	Description
None (v1.4.2+)	A placement policy with no redundancy at the device level
RAIDO	A placement policy where consecutive logical blocks of data are uniformly distributed across a set of independent storage devices without offering any form of redundancy. This is commonly referred to as data striping. This form of RAID will encounter data loss with the failure of any storage device in the set.
RAID00	A placement policy that creates a RAID 0 stripe set over two or more RAID 0 sets. This is commonly referred to as RAID 0+0. This form of data layout is not fault tolerant; if any storage device fails there will be data loss.
RAID01	A data placement policy that creates a mirrored device (RAID 1) over a set of striped devices (RAID 0). This is commonly referred to as RAID 0+1 or RAID 0/1. Data stored using this form of RAID is able to survive a single RAID 0 data set failure without data loss.
RAID1	A placement policy where each logical block of data is stored on more than one independent storage device. This is commonly referred to as mirroring. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID10	A placement policy that creates a striped device (RAID 0) over a set of mirrored devices (RAID 1). This is commonly referred to as RAID 1/0. Data stored using this form of RAID is able to survive storage device failures in each RAID 1 set without data loss.
RAID10E	A placement policy that uses a RAID 0 stripe set over two of more RAID 10 sets. This is commonly referred to as Enhanced RAID 10. Data stored using this form of RAID is able to survive a single device failure within each nested RAID 1 set without data loss.

Table 164: RAIDType property values ##### ReadCachePolicy:

string	Description
RAID10Triple	A placement policy that uses a striped device (RAID 0) over a set of triple mirrored devices (RAID 1Triple). This form of RAID can survive up to two failures in each triple mirror set without data loss.
RAID1E	A placement policy that uses a form of mirroring implemented over a set of independent storage devices where logical blocks are duplicated on a pair of independent storage devices so that data is uniformly distributed across the storage devices. This is commonly referred to as RAID 1 Enhanced. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID1Triple	A placement policy where each logical block of data is mirrored three times across a set of three independent storage devices. This is commonly referred to as three-way mirroring. This form of RAID can survive two device failures without data loss.
RAID3	A placement policy using parity-based protection where logical bytes of data are uniformly distributed across a set of independent storage devices and where the parity is stored on a dedicated independent storage device. Data stored using this form of RAID is able to survive a single storage device failure without data loss. If the storage devices use rotating media, they are assumed to be rotationally synchronized, and the data stripe size should be no larger than the exported block size.
RAID4	A placement policy using parity-based protection where logical blocks of data are uniformly distributed across a set of independent storage devices and where the parity is stored on a dedicated independent storage device. Data stored using this form of RAID is able to survive a single storage device failure without data loss.

string	Description
RAID5	A placement policy using parity-based protection for storing stripes of 'n' logical blocks of data and one logical block of parity across a set of 'n+1' independent storage devices where the parity and data blocks are interleaved across the storage devices. Data stored using this form of RAID is able to survive a single storage device failure without data loss.
RAID50	A placement policy that uses a RAID 0 stripe set over two or more RAID 5 sets of independent storage devices. Data stored using this form of RAID is able to survive a single storage device failure within each RAID 5 set without data loss.
RAID6	A placement policy using parity-based protection for storing stripes of 'n' logical blocks of data and two logical blocks of independent parity across a set of 'n+2' independent storage devices where the parity and data blocks are interleaved across the storage devices. Data stored using this form of RAID is able to survive any two independent storage device failures without data loss.
RAID60	A placement policy that uses a RAID 0 stripe set over two or more RAID 6 sets of independent storage devices. Data stored using this form of RAID is able to survive two device failures within each RAID 6 set without data loss.
RAID6TP	A placement policy that uses parity-based protection for storing stripes of 'n' logical blocks of data and three logical blocks of independent parity across a set of 'n+3' independent storage devices where the parity and data blocks are interleaved across the storage devices. This is commonly referred to as Triple Parity RAID. Data stored using this form of RAID is able to survive any three independent storage device failures without data loss.

The defined property values are listed in Table 165. This property shall contain a boolean indicator of the read cache policy for the Volume.

string	Description
AdaptiveReadAhead	A caching technique in which the controller dynamically determines whether to pre-fetch data anticipating future read requests, based on previous cache hit ratio.
Off	The read cache is disabled.
ReadAhead	A caching technique in which the controller pre-fetches data anticipating future read requests.

 Table 165: ReadCachePolicy property values ##### ReplicaType:

The defined property values are listed in Table 166. This parameter shall contain the type of replica relationship to be created (e.g., Clone, Mirror, Snap).

string	Description
Clone	This enumeration literal shall indicate that replication shall create a point in time, full copy the source.
Mirror	This enumeration literal shall indicate that replication shall create and maintain a copy of the source.
Snapshot	This enumeration literal shall indicate that replication shall create a point in time, virtual copy of the source.
TokenizedClone	This enumeration literal shall indicate that replication shall create a token based clone.

Table 166: ReplicaType property values ##### ReplicaUpdateMode:

The defined property values are listed in Table 167. This parameter shall specify the replica update mode.

Table 167: ReplicaUpdateMode property values ##### VolumeType:

string	Description
Active	This enumeration literal shall indicate Active-Active
	(i.e. bidirectional) synchronous updates.

string	Description
Adaptive	This enumeration literal shall indicate that an implementation may switch between synchronous and asynchronous modes.
Asynchronous	This enumeration literal shall indicate Asynchronous updates.
Synchronous	This enumeration literal shall indicate Synchronous updates.

The defined property values are listed in Table 168. This property shall contain the type of the associated Volume.

string	Description
Mirrored	The volume is a mirrored device.
NonRedundant	The volume is a non-redundant storage device.
RawDevice	The volume is a raw physical device without any RAID or other virtualization applied.
SpannedMirrors	The volume is a spanned set of mirrored devices.
SpannedStripesWithParity	The volume is a spanned set of devices which uses parity to retain redundant information.
StripedWithParity	The volume is a device which uses parity to retain redundant information.

Table 168: VolumeType property values ##### VolumeUsage:

The defined property values are listed in Table 169. This property shall contain the volume usage type for the Volume.

string	Description	
CacheOnly	The volume shall be allocated for use as a non-consumable cache only volume.	
Data	The volume shall be allocated for use as a consumable data volume.	
ReplicationReserve	The volume shall be allocated for use as a non-consumable reserved volume for replication use.	
SystemData	The volume shall be allocated for use as a consumable data volume reserved for system use.	
SystemReserve	The volume shall be allocated for use as a non-consumable system reserved volume.	

Table 169: VolumeUsage property values ##### WriteCachePolicy:

The defined property values are listed in Table 170. This property shall contain a boolean indicator of the write cache policy for the Volume.

string	Description		
Off (v1.4.1+)	Indicates that the write cache shall be disabled.		
ProtectedWriteBack	A caching technique in which the completion of a write request is signaled as soon as the data is in cache, and actual writing to non-volatile media is guaranteed to occur at a later time.		
UnprotectedWriteBack	A caching technique in which the completion of a write request is signaled as soon as the data is in cache; actual writing to non-volatile media is not guaranteed to occur at a later time.		
WriteThrough	A caching technique in which the completion of a write request is not signaled until data is safely stored on non-volatile media.		

Table 170: WriteCachePolicy property values ##### WriteCacheState:

The defined property values are listed in Table 171. This property shall contain the

WriteCacheState policy setting for the Volume.

Table 171: WriteCacheState property values ##### WriteHoleProtectionPolicy:

string	Description
Degraded	Indicates an issue with the cache state in which the cache space is diminished or disabled due to a failure or an outside influence such as a discharged battery.
Protected	Indicates that the cache state type in use generally protects write requests on non-volatile media.
Unprotected	Indicates that the cache state type in use generally does not protect write requests on non-volatile media.

The defined property values are listed in Table 172. This property specifies the policy that is enabled to address the write hole issue on the RAID volume. If no policy is enabled at the moment, this property shall be set to 'Off'.

 Table 172:
 WriteHoleProtectionPolicy property values

string	Description	
DistributedLog	The policy that distributes additional log (e.q. checksun the parity) among the volume's capacity sources to addr write hole issue. Additional data is used to detect data corruption on the volume.	
Journaling	The policy that uses separate block device for write-ahead logging to address write hole issue. All write operations on the RAID volume are first logged on dedicated journaling device that is not part of the volume.	
Oem	The policy that is Oem specific. The mechanism details are unknown unless provided separately by the Oem.	
Off	The support for addressing the write hole issue is disabled. The volume is not performing any additional activities to close the RAID write hole.	

9.4.38 VolumeCollection

9.4.38.1 URIs /redfish/v1/CompositionService/ResourceBlocks/{*Resource*-BlockId}/Storage/{StorageId}/Volumes /redfish/v1/CompositionService/Resource-Blocks/{ResourceBlockId}/Systems/{ComputerSystemId}/Storage/{StorageId}/ Volumes /redfish/v1/ResourceBlocks/{ResourceBlockId}/Storage/{StorageId}/Volumes /redfish/v1/ResourceBlocks/{ResourceBlockId}/Systems/{ComputerSystemId}/ Storage/{StorageId}/Volumes /redfish/v1/Storage/{StorageId}/ConsistencyGroups/ {ConsistencyGroupId}/Volumes /redfish/v1/Storage/{StorageId}/FileSystems/{FileSystemId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes /redfish/v1/Storage/ {StorageId}/StoragePools/{StoragePoolId}/AllocatedVolumes /redfish/v1/Storage/ {StorageId}/StoragePools/{StoragePoolId}/CapacitySources/{CapacitySourceId}/ ProvidingVolumes /redfish/v1/Storage/{Storageld}/Volumes /redfish/v1/Storage-Services/{StorageServiceId}/ConsistencyGroups/{ConsistencyGroupId}/Volumes / redfish/v1/StorageServices/{StorageServiceId}/FileSystems/{FileSystemId}/CapacitySources/{*CapacitySourceId*}/ProvidingVolumes /redfish/v1/StorageServices/ {StorageServiceId}/StoragePools/{StoragePoolId}/AllocatedVolumes /redfish/v1/ StorageServices/{StorageServiceId}/StoragePools/{StoragePoolId}/CapacitySources/ {CapacitySourceId}/ProvidingVolumes /redfish/v1/StorageServices/{StorageServiceld//Volumes/redfish/v1/StorageServices/{StorageServiceId}/Volumes/{VolumeId}/ CapacitySources/{CapacitySourceId}/ProvidingVolumes /redfish/v1/Systems/ {ComputerSystemId}/Storage/{StorageId}/ConsistencyGroups/{ConsistencyGroupId}/ Volumes /redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/FileSystems/ {FileSystemId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes /redfish/v1/ Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/{StoragePoolId}/ AllocatedVolumes /redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/StoragePools/{StoragePoolId}/CapacitySources/{CapacitySourceId}/ProvidingVolumes / redfish/v1/Systems/{ComputerSystemId}/Storage/{StorageId}/Volumes

9.4.38.2 Properties The properties defined for the VolumeCollection schema are summarized in Table 173.

Property	Туре	Attributes	Notes
Description	string	read-only (null)	This property shall contain the description of this resource. The value shall conform with the 'Description' clause of the Redfish Specification.
Members [{	array		The value of each member entry shall reference a Volume resource.
@odata.id	string	read-only	Link to a Volume resource. See the Links section and the <i>Volume</i> schema for details.
}]			
Members@odata.nex	t Link string (URI)	read-only	The value of this property shall be a URI to a resource, with the same @odata.type, containing the next set of partial members.

Table 173: VolumeCollection properties

Property	Туре	Attributes	Notes
Name	string	read-only	This property shall contain the name of this resource or array member. The value shall conform with the 'Name' clause of the Redfish Specification.
Oem {}	object		This property shall contain the OEM extensions. All values for properties contained in this object shall conform to the Redfish Specification- described requirements. For property details, see Oem.
