

# Swordfish NVMe Model Overview and Mapping Guide

Version: 1.2.6

**Abstract:** The Swordfish NVMe Model Overview and Mapping Guide defines the model to manage NVMe and NVMeoF storage systems with Redfish and Swordfish. It provides the detailed mapping information between the NVMe, NVMeoF specifications and the Redfish and Swordfish specifications.

# **SNIA Approved Publication**

This document has been released and approved by the SNIA. The SNIA believes that the ideas, methodologies, and technologies described in this document accurately represent the SNIA goals and are appropriate for widespread distribution. Suggestion for revision should be directed to http://www.snia.org/feedback/.

Last Updated: 9 April 2024

#### **DISCLAIMER**

The information contained in this publication is subject to change without notice. SNIA makes no warranty of any kind with regard to this publication, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The SNIA shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use.

Suggestions for revisions should be directed to http://www.snia.org/feedback/.

#### **Current Revision**

SNIA is actively engaged in expanding and refining the Swordfish documentation. The most current revision can be found on the SNIA web site at https://www.snia.org/tech\_activities/standards/curr\_standards/swordfish.

#### **Contact SNIA**

Current SNIA practice is to make updates and other information available through their web site at http://www.snia.org.

#### FEEDBACK AND INTERPRETATIONS

Requests for interpretation, suggestions for improvement and addenda, or defect reports are welcome. They should be sent via the SNIA Feedback Portal at http://www.snia.org/feedback/ or by mail to SNIA, 5201 Great America Parkway, Suite 320, Santa Clara, CA 95054, USA.

#### **INTENDED AUDIENCE**

This document is intended for use by individuals and companies engaged in storage management.

#### **VERSIONING POLICY**

This document is versioned material. Versioned material shall have a three-level revision identifier, comprised of a version number "v", a release number "r" and an errata number "e". Future publications of this document are subject to specific constraints on the scope of change that is permissible from one revision to the next and the degree of interoperability and backward compatibility that should be assumed between products designed to this standard. This versioning policy applies to all SNIA Swordfish versioned materials.

Version Number: Versioned material having version number "v" shall be backwards compatible with all of revisions of that material that have the same version number "v". There is no assurance of interoperability or backward compatibility between revisions of a versioned material with different version numbers.

Release Number: Versioned material with a version number "v" and release number "r" shall be backwards compatible with previous revisions of the material with the same version number, and a lower release number. A minor revision represents a technical change to existing content or an adjustment to the scope of the versioned material. Each minor revision causes the release number to be increased by one.

Errata Number: Versioned material having version number "v", a release number "r", and an errata number "e" should be backwards compatible with previous revisions of the material with the same version number and release number ("errata versions"). An errata revision of versioned material is limited to minor corrections or clarifications of existing

versioned material. An errata revision may be backwards incompatible, if the incompatibility is necessary for correct operation of implementations of the versioned material.

## **Revision History**

Revisions to this document are summarized in Table 1.

**Table 1:** Revision History

Date	Rev	Notes
18 August 2020	1.2.1	Initial Release
31 October 2020	1.2.1c	Released as SNIA Approved Publication
2 March 2021	1.2.2	Added detailed mapping information to match information in NVMe drive profiles for many new referenced properties, and included guidance for mandatory/recommended implementation as reflected in the profiles.
		Added sections for firmware update, with details for NVMe Drive implementation requirements.
		Added cross-references to User's Guide NVMe-specific use cases.
		Errata fixes – correct diagram, correct table headers.
30 August 2021	1.2.3	Update Mapping Guide with new mapping guidance, corresponding to the Swordfish NVMe Front End profile.
5 December 2021	1.2.3	Release as SNIA Approved Publication

Date	Rev	Notes
12 April 2022	1.2.4	Release as SNIA Working Draft. Errata fixes throughout. Added section for EBOF configuration, and additions to appendix A to correspond to EBOF, JBO and NVMe-oF configurations.
12 July 2022	1.2.4a	Release as SNIA Standard.
16 March 2023	1.2.5	Updated all references from NVMe 1.4 Specification to the NVM Express Base Specification 2.0c throughout. Update references to figures in NVMe 2.0 Base Specification as well as the NVM Express NVM Command Set Specification 1.0c, NVMe over PCIe Transport Specification 1.0c, and NVMe-MI 1.2c Specification. Document usage of SecuritySend and SecurityReceive Actions on StorageController
		Define usage for Links.Controllers in
		Namespace (volume)
		Errata Fixes:
		&nbps Clarify references to CapacitySource collection vs instance Standardize nomenclature for
		Mandatory instances throughout
20 June 2023	1.2.5a	Release as SNIA Standard
22 January 2024	1.2.6	Release as Working Draft
		Updated cross-references.
		Copyrights updated to 2024.
		Updates SNIA Front Matter.
		Updated Contributing members.

Date	Rev	Notes
		Added NVMeDomains Object, and updated corresponding mockups.
		Added missing reference to Drives and EBOFs in HTML version of document.
		Updated NVMeNamespaceProperties to new guidance for LBAFormats representation (in both mockups and mapping properties).  Removed/deprecated NVMeNamespace Properties.NumberLBAF ormats.
		Added new section Namespace Capabilities.
		Errata fixes - corrected references to PredictedMediaLifetLeftPercent and NVMeoFDiscoverySubsystems properties.
9 April 2024	1.2.6	Release as SNIA Standard
		Errata fix - include missing  NVMeDomainds section in doc from  build error.

#### **About SNIA**

SNIA is a not-for-profit global organization made up of corporations, universities, startups, and individuals. The members collaborate to develop and promote vendor-neutral architectures, standards, and education for management, movement, and security for technologies related to handling and optimizing data. SNIA focuses on the transport, storage, acceleration, format, protection, and optimization of infrastructure for data. Learn more at www.snia.org.

# 1 Abstract

The Swordfish NVMe Model Overview and Mapping Guide defines the model to manage NVMe and NVMe-oF storage systems with Redfish and Swordfish. It provides the detailed mapping information between the NVMe, NVMe-oF specifications and the Redfish and Swordfish specifications.

# 2 Scope

#### 2.1 Document Goals

This document describes how both the NVMe Subsystem model and the NVMe-oF fabric system model should be mapped consistently to Redfish and Swordfish constructs for implementations to be managed within Redfish and Swordfish management environments.

This model and mapping information does not describe or assert any specific implementation recommendation technologies.

This document also provides the mapping information for properties recommended to be implemented in Redfish/Swordfish for NVMe and NVMe-oF devices and the corresponding reference information from the NVMe and NVMe-oF specifications.

#### 2.2 Audience Assumptions

This document assumes that the reader of this document is familiar with NVMe and NVMe-oF technologies and concepts. It also assumes the reader has knowledge of the Redfish and Swordfish concepts.

# **3 Normative References**

#### 3.1 Overview

The documents listed in Table 3 are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

#### 3.2 Approved references

#### 4 NVMe Model Overview

#### 4.1 Introduction

In order to manage NVMe and NVMe-oF devices and systems in a large scale environment, a higher level management ecosystem is needed. The Redfish/Swordfish management specifications are designed to manage multi-system environments, including multiple types of fabrics, covering not only multiple technologies, but also inclusive of system management, storage management and fabric management, making it the ideal ecosystem in which to add not only the integration of NVMe devices for system and storage management, but NVMe-oF for fabric management.

This document describes how both the NVMe Subsystem model and the NVMe-oF fabric system model should be mapped consistently to Redfish and Swordfish constructs for implementations to be managed within Redfish and Swordfish management environments. This model and mapping information does not describe or assert any specific implementation recommendation technologies.

Similar implementations will have similar Redfish and Swordfish constructs. Mockups are used to show static examples of sample representations. Requirements and recommendations for implementations are provided separately through the Swordfish NVMe and NVMe-oF profiles. The profiles use the Redfish interoperability profile schema to specify the required, recommended and optional properties and schema for specific configurations and functionality that correspond to classes of implementations.

#### 4.1.1 Fundamental Model Design Assertions

- There shall be a unified model across all types of NVMe devices.
- There shall not be a different model for "drives" vs other types of NVMe devices
- The model will cover an appropriate level of abstraction for all types of NVMe devices based on modeling and mockups reflected in the documented permutations (e.g., from simple drives through to complex fabric virtual systems)
  - Simple NVMe drives; complex NVMe drives; JBOFs/EBOFs; Arrays/RBOFs
- The logical model for NVMe-oF shall leverage the NVMe Subsystem model

- Logical subsystems, controllers, and namespaces are the same objects with the same relationships as in the NVMe Subystem Model. Unneeded objects are not instantiated (e.g., Endurance Groups, sets)
- The NVMe native model should map to the existing Redfish and Swordfish constructs when and where possible
  - Mapping future NVMe / NVMe-oF functionality should follow this principle when and where possible (e.g., firmware update mapping to the RF update service)

#### 4.2 Overall NVMe Subsystem Model

#### **Key Tenets:**

- Model reflects a unified view of all NVMe device types.
- Devices will instantiate an appropriate subset of the model
- The model diagrams do not reflect all available schema elements.
- Model leverages and coarsely maps to existing (Redfish and) Swordfish storage model

#### 4.2.1 Major NVM Objects Mapped to RF/SF

**4.2.1.1 NVM Subsystem** An NVM subsystem includes one or more controllers, zero or more namespaces, and one or more ports. Examples of NVM subsystems include Enterprise and Client systems that utilize PCI Express based solid state drives and/or fabric connectivity.

# **4.2.1.2 NVM Controller (IO, Admin and Discovery)** The interface between a host and an NVM subsystem

Admin controller: controller that exposes capabilities that allow a host to manage an NVM subsystem

Discovery: controller that exposes capabilities that allow a host to retrieve a Discovery Log Page

I/O: controller that implements I/O queues and is intended to be used to access a non-volatile memory storage medium

- **4.2.1.3 Namespace** A quantity of non-volatile memory that may be formatted into logical blocks. When formatted, a namespace of size n is a collection of logical blocks with logical block addresses from 0 to (n-1).
- **4.2.1.4 Endurance Group** A portion of NVM in the NVM subsystem whose endurance is managed as a group
- **4.2.1.5 NVM Set** An NVM Set is a collection of NVM that is separate (logically and potentially physically) from NVM in other NVM Sets.
- **4.2.1.6 NVM Domain** A domain is the smallest indivisible unit that shares state (e.g., power state, capacity information). Domain members can be NVM controllers, endurance groups, sets or namespaces.

#### 4.2.2 Unmapped objects

There are a number of objects that are required for the proper integration of NVMe support within Redfish and Swordfish, but which are not supported by an entity that can be mapped directly from the various NVM Specifications. Information about these related but un-mapped objects are defined elsewhere in the documentation provided with each Swordfish release.

They are summarized in Appendix A.

#### 4.2.3 NVM Subsystem Model

The following diagram reflects the high level mapping of the key NVM objects into Redfish / Swordfish schema objects. These largely follow existing relationships used by the Swordfish storage specification for non-NVMe implementations as well, which provides a great deal of consistency for storage clients, as well as for implementations such as NVMe arrays that may be delivering solutions that combine NVMe and other technologies. This model covers a wide range of instantiations ranging from individual SSDs, to multirack storage systems. All of these can be represented by this NVM Subsystem model, shown in Figure 1.

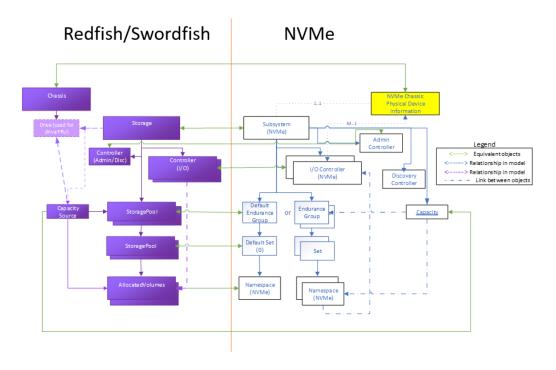

Figure 1: Subsystem model

#### 4.2.4 NVMe-oF Subsystem Model

Figure 2 shows the high level mapping of the key NVMe-oF objects to Redfish / Swordfish schema objects. Following the tenets described in the model overview section, these extend the mapping used in the NVM Subsystem for the logical versions of the objects.

This model also includes the use of the Redfish Fabric model to cover the connectivity aspects of the fabric.

The grey shaded portion of this diagram reflects the logical / exported portion of the NVMe-oF environment represented in Redfish / Swordfish.

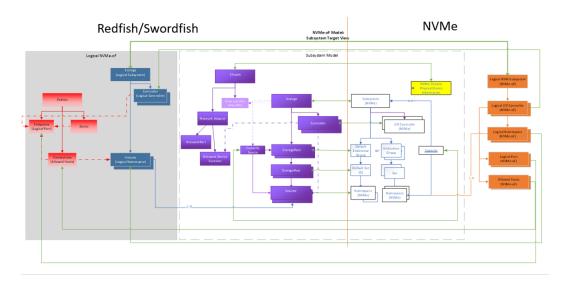

Figure 2: NVMe-oF Subsystem Model

### **5 Example Instances**

#### 5.1 Introduction

This section of the document provides a series of example usages of the model that represent common instantiations of NVMe devices, and how those devices may use the various NVMe, and correspondingly, Redfish and Swordfish objects and schema. This section will not provide comprehensive representations of all potential device types; rather, a representation of several common device types, in order to provide an illustration of the application of the model for those that are unfamiliar with either the NVMe or Redfish / Swordfish ecosystems.

Further, the following sections describe the examples and do not attempt to cover all potential permutations for alternate representations of each device class or possible implementations.

#### 5.2 Simple SSD

#### 5.2.1 Overview

Figure 3 shows a sample representation of a simple NVMe SSD, with a PCIe interface. It is implemented with no endurance group or NVM set functionality; it has only a single namespace capability, and a single IO controller.

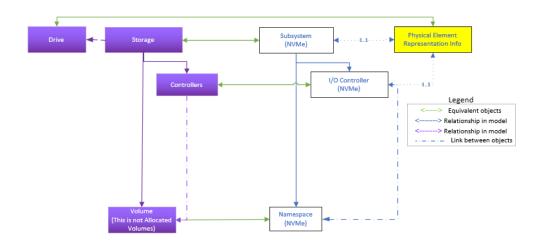

Figure 3: Simple SSD instance diagram

#### 5.2.2 Explanation of Object use

Simple SSDs are SSDs that do not use Endurance Groups or sets. Correspondingly, they only use Storage, Controllers, Volumes (Namespaces), and the Drive schema to represent the fundamental components.

Many SSD implementations support exactly one namespace. These are described by this model, and the mockups reflect this configuration.

This model can also support extensions to cover dual-ported configurations, as well as support for multiple IO controllers per port.

#### 5.2.3 Redfish / Swordfish Object Representation

Figure 4 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

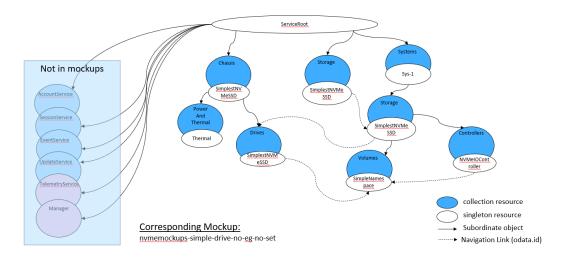

Figure 4: Simple SSD mockup example

#### 5.2.4 Mockup

A corresponding mockup for this configuration can be found at <a href="http://simple-ssd-mockups.swordfishmockups.com/redfish/v1/">http://simple-ssd-mockups.swordfishmockups.com/redfish/v1/</a>.

## 5.3 Complex SSD

#### 5.3.1 Overview

Figure 5 shows a sample representation of a complex NVMe SSD, with a PCIe interface. This example shares many similarities to the simple device model, but adds the representation of NVMe Endurance Groups and NVM Sets using the Swordfish StoragePool schema, with additional NVMe specific properties.

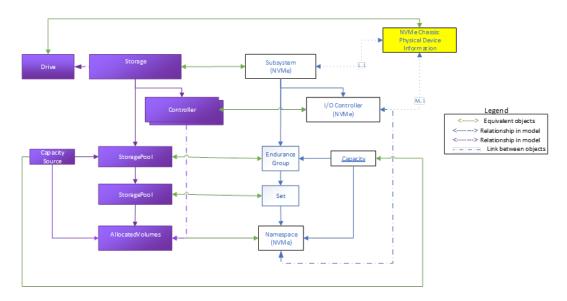

Figure 5: Complex SSD Model

## 5.3.2 Explanation of Object use

Complex SSDs are SSDs that use Endurance Groups and NVM sets. They also use Storage, Controllers, Volumes (Namespaces), and the Drive schema to represent the fundamental components.

This model can also support extensions to cover dual-ported configurations, as well as support for multiple IO controllers per port.

Endurance Groups divide the media into distinct wear-leveling domains. How this happens is implementation specific.

NVM Sets further subdivide an endurance group in order to limit performance interference within and across these domains.

When this type of device supports dynamic namespace allocation and NVM Sets, the management of the namespaces is done within an NVM Set as the underlying capacity source (e.g., the storage pool).

#### 5.3.3 Redfish / Swordfish Object Representation

Figure 6 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

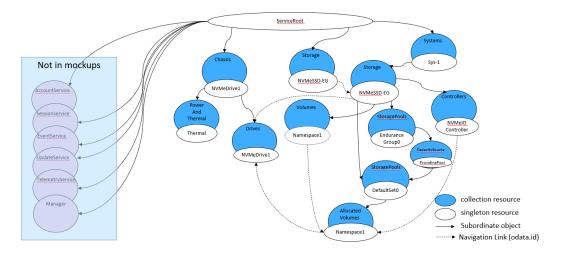

Figure 6: Complex SSD Model

**5.3.3.1 Mockup** A corresponding mockup for this configuration can be found at http://simple-ssd-eg-set-mockups.swordfishmockups.com/redfish/v1/.

#### 5.4 Simple SSD with IP (NVMe-oF) Attach

#### 5.4.1 Overview

This example reflects an IP-attached drive configuration, with a single ethernet port configured, as illustrated in Figure 7. It includes a drive configured with a default endurance group and NVM Set, and is instantiated in the Storage Collection off the Service Root. The network configuration is modeled in the Chassis.

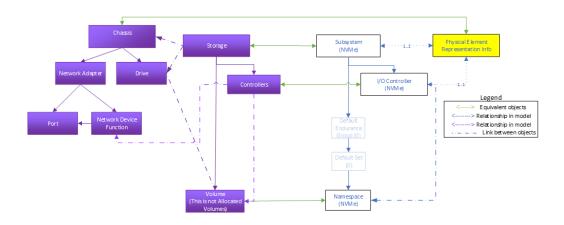

Figure 7: Simple IP-attached SSD

#### 5.4.2 Explanation of Object use

Simple SSDs with IP attach are also SSDs that do not use Endurance Groups or sets, but that have IP-based network interfaces. Correspondingly, they only use Storage, Controllers, Volumes (Namespaces), and the Drive schema to represent the fundamental components. In addition, they use the Redfish Network Adapter, Port and Network Device Function to model the configuration of the IP interface port(s).

As with the Simple SSD configuration, Many SSD with IP-attach implementations support exactly one namespace. These are described by this model, and the mockups reflect this configuration.

This model can also support extensions to cover multi-ported configurations, as well as support for multiple IO controllers per port.

#### 5.4.3 Redfish / Swordfish Object Representation

Figure 8 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

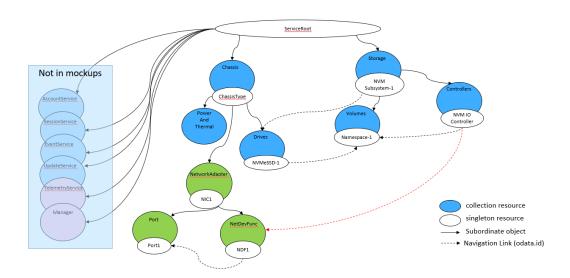

Figure 8: Simple IP-attached SSD mockup

## 5.4.4 Mockup

A corresponding mockup for this configuration can be found at http://ethernet-attach-drive-mockups.swordfishmockups.com/redfish/v1/.

#### **5.5 JBOF**

#### 5.5.1 Overview

This example covers a representation of a JBOF ("just a bunch of flash") enclosure and contained drives. This mockup reflects a PCIe front-end attach configuration with a set of drives.

Figure 9 shows only the controller object representation for this JBOF configuration. This includes the admin controller function for enclosure management.

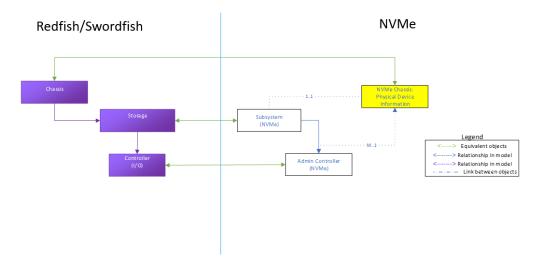

Figure 9: JBOF configuration controller object

Figure 10 shows the combined object representations for the JBOF system, with both the JBOF controller and NVMe drives (using the Simple SSD style drives) represented in the system. Note that the full mockup represented has 7 drives, while this diagram only represents two for the sake of visual clarity.

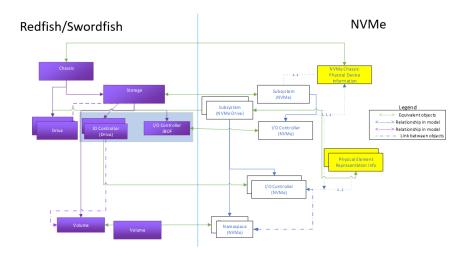

Figure 10: Full JBOF system

## 5.5.2 Explanation of Object use

This type of JBOF system uses the Chassis, Storage and Controller objects to reflect physical component modeling, Subsystem and Admin Controller functionality.

The Chassis model and Admin controller represent NVM's SES (SCSI enclosure services) usage.

#### 5.5.3 Redfish / Swordfish Object Representation

Figure 11 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

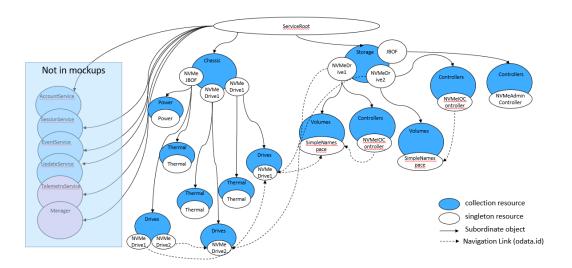

Figure 11: JBOF system instance

## 5.5.4 Mockup

A corresponding mockup for this configuration can be found at <a href="http://nvme-jbof-mockups.swordfishmockups.com/redfish/v1/">http://nvme-jbof-mockups.swordfishmockups.com/redfish/v1/</a>

#### **5.6 EBOF**

#### 5.6.1 Overview

This example covers a representation of a EBOF ("Ethernet bunch of flash") enclosure and contained drives. This mockup reflects a Ethernet front-end attach enclosure configuration containing a set of Ethernet-attach drives.

Figure 12 shows the combined object representations for the EBOF system, with both the EBOF controller and Ethernet-attach drives (using the Simple SSD with IP drives) represented in the system. Note that the full mockup represented has multiple drives, while this diagram only represents one for the sake of visual clarity.

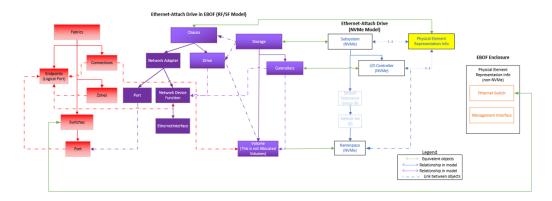

Figure 12: Full EBOF system

#### 5.6.2 Explanation of Object use

This type of EBOF system uses the Storage and Controller objects to reflect component modeling of the NVMe Subsystem and controller functionality.

Connectivity is represented through the Chassis model's NetworkAdapter, NetworkPort, NetworkDeviceFunction and EthernetInterface objects, the Fabric model's Switch and Port objects, as well as the Manager model's EthernetInterface and ManagerProtocol. In-band management capability is also modeled via Admin controllers, consistent with other NVMe devices.

## 5.6.3 Redfish / Swordfish Object Representation

Figure 13 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

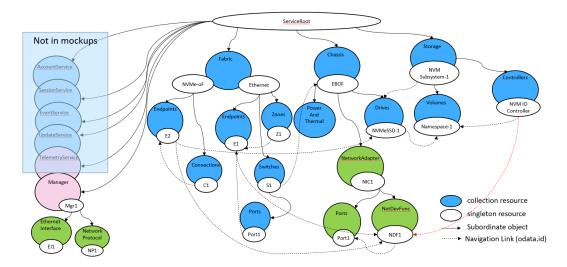

Figure 13: EBOF system instance

#### 5.6.4 Mockup

A corresponding mockup for this configuration can be found at <a href="http://nvme-ebof-mockups.swordfishmockups.com/redfish/v1/">http://nvme-ebof-mockups.swordfishmockups.com/redfish/v1/</a>

## 5.7 Opaque Array / NVMe Front End Device

#### 5.7.1 Overview

The "opaque" array reflects a system with an NVMe front end, but the internal implementation is vendor specific, and not necessarily presented by the vendor (aka "opaque"). Figure 14 shows a system that presents an NVMe front-end but also exposes a SATA drive backend. This could be done to support both FRU management and volume/namespace creation.

Requirements for the NVMe portion of this type of configuration is documented in the SwordfishNVMeFrontEnd profile; opaque arrays should implement both traditional Swordfish block profiles, in addition to the SwordfishNVMeFrontEnd profile.

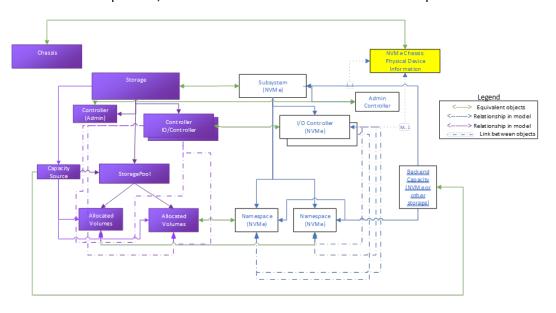

Figure 14: Opaque array example

#### 5.7.2 Explanation of Object use

The opaque array example presents NVMe specific information in Redfish/Swordfish objects, using the Storage, Controller, and Volume objects.

In addition, device management information is presented through StoragePool and Drive objects, providing internal, non-NVMe implementation specific information to the user,

for configuration, diagnosis and other storage management functions. (This set of objects is subject to the standard Swordfish specification and profiles.)

#### 5.7.3 Redfish / Swordfish Object Representation

Figure 15 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

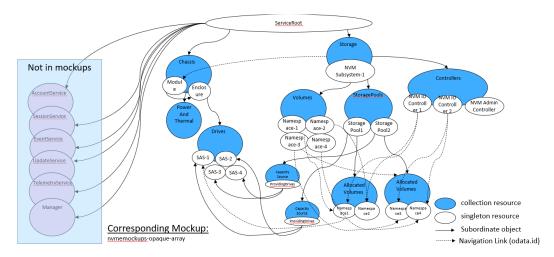

Figure 15: Sample opque system instance

#### 5.7.4 Mockup

A corresponding mockup for this configuration can be found at <a href="http://nvme-opaque-array-mockups.swordfishmockups.com/redfish/v1/">http://nvme-opaque-array-mockups.swordfishmockups.com/redfish/v1/</a>.

#### 5.8 Subsystem (Fabric) Model - NVMe-oF: Fabric Attach Subsystem

#### 5.8.1 Overview

Figure 16 shows a logical/exported NVMe-oF subsystem presenting one logical subsystem, one I/O controller, one namespace, one port and representing one allowed host,

using the Redfish Fabric model. The fabric model uses the Connection schema to characterize the allowed host information, and Endpoints and Zones to show the network connectivity from the device's perspective.

This example also includes NVMeDomains. NVMeDomains contain a collection of domain members; these can be NVM controllers, endurance groups, NVM sets, or namespaces.

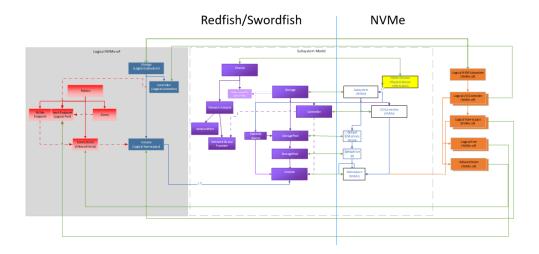

Figure 16: NVMe-OF subsystem example

#### 5.8.2 Explanation of Object use

The fabric attach subsystem example shows the representation of logical, or exported, subsystems, controllers, and namespaces using the Storage, Controller and Volume objects respectively.

It also uses portions of the Redfish fabric model to represent the host attachment information - allowed hosts and logical port - using the Connections and Endpoints objects respectively.

## 5.8.3 Redfish / Swordfish Object Representation

Figure 17 shows the representation, as expressed in the mockup indicated below, of a sample instantiation using Redfish / Swordfish objects.

Note that this mockup does not represent a complete service instantiation; it contains only objects of interest for this context.

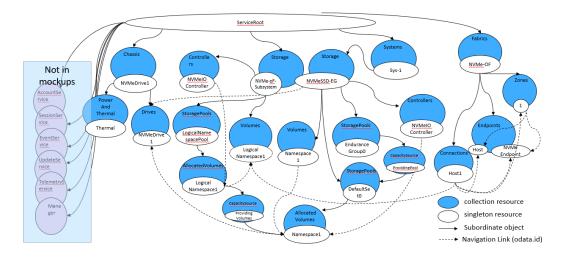

Figure 17: NVMe-oF system instance

#### 5.8.4 Mockup

There are multiple mockups that show the representation for this configuration:

- A mockup for this configuration using an Ethernet attach front-end can be found at http://nvmeof-mockups.swordfishmockups.com/redfish/v1/.
- A mockup for this configuration using an RDMA attach front-end can be found at http://nvmeof-RDMA-mockup.swordfishmockups.com/redfish/v1.

## **6 Property Mapping**

#### 6.1 Introduction

The property mapping provided defines the preferred translation between the Red-fish/Swordfish schema objects and properties, and the corresponding NVMe and NVMe-oF specification properties. The information is ordered within the Redfish/Swordfish objects; each cross-referenced property within the Redfish/Swordfish structure therefore contains a detailed reference to its mapped property in the NVMe ecosystem.

Each section also includes a sample Redfish/Swordfish mockup presenting an example usage for that object.

## **6.2 Property Mapping Template**

Table 4 provides the template and an example for the property mapping provided in the following sections of this document.

For each property (whether a reference, collection, complex type or actual property), there is a comparison between the property in Redfish/Swordfish to the corresponding property in either the NVMe or NVMe-oF specification. The RF/SF property is provided within its schema context; the NVMe/NVMe-oF specification reference is provided within the table, showing both which specification, as well as the section and, if appropriate, the figure in which the property is specified.

Similarly, the type of each property is correspondingly specified. The RF/SF type is specified, and the NVM Spec property type is shown, as well as, where appropriate, any additional identifying information, such as byte offset and data structure.

The Mandatory field is used to specify whether properties are Mandatory or Optional on the NVMe specification side, and in the rare instance where properties are Mandatory in the Redfish/Swordfish schema. (Recommended / required properties for specific implementation types in Redfish/Swordfish will be done separately, through the use of profiles.)

The Notes field can / will be used to include any relevant information about either the purpose of the property, additional context, or other useful information to implementers, such as inter-relationships with other properties.

**Table 4:** Property Mapping Template and Example

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Redfish / Swordfish Schema Property: RecommendedArbitrationBurst Size	NVM Spec Property / Field: Identify Command / Identify Controller (CNS 01h) / RecommendedArbitrationBurst (RAB) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1, Figure 275 (Identify Controller Data Structure, I/O Command Set Independent) / RecommendedArbitrationBurst (RAB): Bytes 72
Туре	Redfish / Swordfish Schema Type: String	Power of 2 <sup>n</sup>
Descript ion	The Recommended Arbitration Burst Size indicates the maximum number of commands that the controller may launch at one time from a particular Submission Queue.	This is the recommended Arbitration Burst size.
LongDesc ription	This property shall contain the Recommended Arbitration Burst Size indicates the maximum number of commands that the controller may launch at one time from a particular Submission Queue. The value is expressed as a power of two (e.g., 000b indicates one, 011b indicates eight). A value of 111b indicates no limit.	This is the recommended Arbitration Burst size. The value is in commands and is reported as a power of two (2^n). This is the same units as the Arbitration Burst size.

	information. These are used to	
	provide information on NVM IO,	
	Admin and Discovery controllers.	

# **6.3.2.3 Description** The mapping for Description is summarized in Table 7.

Table 7: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Description is a read-only field.	Return the common description: "An NVM Express Subsystem is an NVMe device that contains one or more NVM Express controllers and may contain one or more namespaces."

# **6.3.2.4 Drives** The mapping for Drives is summarized in Table 8.

Table 8: Drives mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Drives	N/A
Туре	Collection(Drive.Drive)	N/A
Descript ion	The set of drives attached to the storage controllers that this resource represents.	N/A
LongDesc ription	This property shall contain a set of the drives attached to the storage controllers that this resource represents.	N/A
Mandator y	Optional Mandatory for NVMe Drives.	
Notes	For NVMe Drive implementation, this links to "Drive" object, which contains the physical representation of NVMe Drive information.	

# **6.3.2.5 Identifiers** The mapping for Identifiers is summarized in Table 9.

Table 9: Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers	N/A
Туре	Collection(Resource.Identifier)	N/A
Descript ion	The Durable names for the subsystem.	N/A
LongDesc ription	This property shall contain a list of all known durable names for the associated subsystem.	N/A
Mandator y	Mandatory	
Notes	This is an array of unique identifiers for the NVM Subsystem. There will only be one instance in this array for Subsystem. Refer to the Identify Controller data structure (CNS 01h) bits 1023:768 in figure 275 (Identify – Identify Controller Data Structure, I/O Command Set Independent) of the NVMe Base Specification.	

# **6.3.2.6 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 10.

Table 10: Identifiers.DurableNameFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	NVM Spec Property / Field: NVMe Qualified Names NVM Spec: Section:Figure NVMe 2.0: Section 4.5
Туре	Resource.v1_1_0.DurableNa meFormat	UTF-8 null-terminated string
Descript ion	The format of the Durable names for the subsystem.	This specifies the NVM Subsystem NVMe Qualified Name as a UTF-8 null-terminated string.
LongDesc ription	This specifies the format of the associated NVM Subsystem NVMe Qualified Name of type NQN. Support for this field is mandatory if the controller supports revision 1.2.1 or later as indicated in the Version register (refer to section 3.1.2).	This specifies the NVM Subsystem NVMe Qualified Name as a UTF-8 null-terminated string.
Mandator y	Optional	Yes if the controller supports revision 1.2.1 or later as indicated in the Version register.
Notes	This is an enum with multiple potential values. For this particular usage in Subsystem, there will only be one instance populated, of type NQN which is a UTF-8 null-terminated string.	

# **6.3.2.7 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 11.

Table 11: Identifiers. Durable Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	NVM Spec Property / Field: Identify Command / Identify Controller (CNS 01h)NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1, Figure 275 (Identify Controller Data Structure, I/O Command Set Independent), Bits 768-1023 - NVM Subsystem NVMe Qualified Name (SUBNQN)
Туре	Edm.String	UTF-8 null-terminated string
Descript ion	The format of the Durable names for the subsystem.	This field specifies the NVM Subsystem NVMe Qualified Name (SUBNQN)
LongDesc ription	This specifies the NVM Subsystem NVMe Qualified Name as a UTF-8 null-terminated string.	This field specifies the NVM Subsystem NVMe Qualified Name as a UTF-8 null-terminated string. Refer to NVMe Base Specification, section 4.5, for the definition of NVMe Qualified Name.
Mandator y	Optional	Yes if the controller supports revision 1.2.1 or later as indicated in the Version register (refer to section 3.1.3.2).

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	For this particular usage in	
	Subsystem, there will only be	
	one instance populated in the	
	identifiers array.	

**6.3.2.8 Links.Enclosures** The mapping for Links.Enclosures is summarized in Table 12.

Table 12: Links. Enclosures mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Enclosures	N/A
Туре	Collection(Chassis.Chassis)	N/A
Descript ion	An array of links to the chassis to which this storage subsystem is attached.	N/A
LongDesc ription	This property shall contain an array of links to resources of type Chassis that represent the physical containers attached to this resource.	N/A
Mandator y	Mandatory	
Notes	For NVMe Drive implementation, this links to a chassis collection that contains the subsystem's "Drive" object, which contains the physical representation of NVMe Drive information. For devices with an NVMe front end interface, e.g., opaque arrays), this refers to the appropriate chassis instance for the device/system; there may be multiple chassis instances, reflecting different physical entities in the system, such as controllers, drive enclosures, racks, etc).	The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.3.2.9 Links.Enclosures@odata.count** The mapping for Links.Enclosures@odata.count is summarized in Table 13.

Table 13: Links.Enclosures@odata.count mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Enclosures@odata.cou ntt	N/A
Туре	(odata property)int64	N/A
Descript ion	Count of the number of items in the Links.Enclosures array.	N/A
LongDesc ription		N/A
Mandator y	Mandatory	
Notes		The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.3.2.10 Links.HostingStorageSystems** The mapping for Links. HostingStorageSystems is summarized in Table 14.

**Table 14:** Links.HostingStorageSystems mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.HostingStorageSystems	N/A
Туре	Collection(ComputerSystem.C omputerSystem)	N/A
Descript ion	The storage systems that host this storage subsystem.	N/A
LongDesc ription	This property shall contain an array of links to resources of type ComputerSystem that represent the storage systems that host this storage subsystem. The members of this array shall be in the StorageSystems resource collection off the service root.	N/A
Mandator y	Optional Recommended for devices with an NVMe front end interface such as opaque arrays.	
Notes	For devices with an NVMe front end interface, e.g., opaque arrays), this refers to the ComputerSystem instances providing the NVMe front end, modeling the device's controller(s).	The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.3.2.11 Links.NVMeoFDiscoverySubsystems** The mapping for Links.NVMeoFDiscoverySubsystems is summarized in Table 15.

**Table 15:** Links.NVMeoFDiscoverySubsystems mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.NVMeoFDiscoverySubsys tems	N/A
Туре	Collection(Storage.Storage)	N/A
Descript ion	An array of links to the discovery subsystems that discovered this subsystem in an NVMe-oF environment.	N/A
LongDesc ription	This property shall contain an array of links to resources of type Storage that represent the discovery subsystems that discovered this subsystem in an NVMe-oF environment.	N/A
Mandator y	Optional Recommended for devices with an NVMe front end interface such as opaque arrays; required for use in NVMe-oF environments and environments using discovery controllers.	
Notes	This information should be constructed from the Swordfish service. There is not a known mapping to NVMe-oF information at this time.	

**6.3.2.12 Links.SimpleStorage** The mapping for Links.SimpleStorage is summarized in Table 16.

Table 16: Links. SimpleStorage mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.SimpleStorage	N/A
Туре	SimpleStorage.SimpleStorage	N/A
Descript ion	The link to the simple storage instance that corresponds to this storage.	N/A
LongDesc ription	This property shall contain a link to a resource of type SimpleStorage that represents the same storage subsystem as this resource.	N/A
Mandator y	Do Not Implement	
Notes		

# **6.3.2.13 Name** The mapping for Name is summarized in Table 17.

Table 17: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	N/A
Туре	String	N/A
Descript ion	The name of the resource or array member.	N/A
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Name is a read-only field.	

# **6.3.2.14 Status.State** The mapping for Status. State is summarized in Table 18.

Table 18: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	N/A
Туре	Resource.State (enum)	N/A
Descript ion	The known state of the resource, such as, enabled.	N/A
LongDesc ription	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	N/A
Mandator y	Optional Recommended to implement for NVMe front end devices such as opaque arrays.	

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible values: Enabled /	In general, there is no simple
	Disabled / StandbyOffline /	corresponding property or
	StandbySpare / InTest / Starting /	mappable set of information at
	Absent / UnavaialableOffline /	this time from the NVMe
	Deferring / Quiesced / Updating /	Specifications. Current guidance
	Qualified	for NVMe drives: do not
		implement this property.
		Guidance will be added in a
		future version of this document
		as this is an important concept
		for clients and for consistency
		with traditional storage devices.
		For opaque arrays and other
		similar devices with an NVMe
		front end, support and map
		these properties to the device's
		concepts of
		Enabled/Disabled/etc.

**6.3.2.15 Status.Health** The mapping for Status.Health is summarized in Table 19.

Table 19: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	NVM Spec Property / Field: Smart / Health Information Log (Log Identifier 02h) / Critical Warning / the NVM subsystem reliability has been degraded due to significant media related errors or any internal error that degrades NVM subsystem reliabilityNVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3, Figure 207 (Get Log Page – SMART / Health Information Log), Byte 00 (Critical Warning), Bit 02
Туре	Resource.Health	8 Bit value
Descript ion	The health state of this resource in the absence of its dependent resources.	Indicates if the NVM subsystem reliability has been degraded due to significant media related errors or any internal error that degrades NVM subsystem reliability
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	Indicates if the NVM subsystem reliability has been degraded due to significant media related errors or any internal error that degrades NVM subsystem reliability

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible Values: OK / Warning / Critical	Implementations of more complex systems, such as opaque arrays and other similar devices with an NVMe front end, may also map this property to the device's concepts of OK/Warning/Critical.

**6.3.2.16 Status.HealthRollup** The mapping for Status.HealthRollup is summarized in Table 20.

Table 20: Status. Health Rollup mapping

Redfish/Swordfish	NVMe / NVMe-oF
Status.HealthRollup	N/A
Resource.Health	N/A
The overall health state from the view of this resource.	N/A
This property shall represent the health state of the resource and its dependent resources. The values shall conform to those defined in the Redfish Specification.	N/A
Mandatory	
Possible Values: OK / Warning / Critical See [Swordfish	
	Status.HealthRollup Resource.Health The overall health state from the view of this resource. This property shall represent the health state of the resource and its dependent resources. The values shall conform to those defined in the Redfish Specification. Mandatory Possible Values: OK / Warning /

**6.3.2.17 StorageControllers** The mapping for StorageControllers is summarized in Table 21.

Table 21: StorageControllers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StorageControllers	N/A
Туре	Storage.StorageControllers	N/A
Descript ion	The set of storage controllers that this resource represents.	N/A
LongDesc ription	This property shall contain a set of the storage controllers that this resource represents.	N/A
Mandator y	Do Not Implement	
Notes	Deprecated for NVMe use - replaced by Controllers (type StorageController.StorageCo ntroller).	

# **6.3.2.18 StorageGroups** The mapping for StorageGroups is summarized in Table 22.

Table 22: StorageGroups mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StorageGroups	N/A
Туре	StorageGroup.StorageGroup	N/A
Descript ion	All of the storage groups, each of which contains a set of volumes and endpoints that are managed as a group for mapping and masking, that belong to this storage subsystem.	N/A
LongDesc ription	This property shall contain a link to a resource collection of type StorageGroupsCollection. This property shall be used when implementing mapping and masking.	N/A
Mandator y	Do Not Implement	
Notes	N/A for NVMe use cases.  Deprecated by Connections.	

## **6.3.2.19 Volumes** The mapping for Volumes is summarized in Table 23.

Table 23: Volumes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Volumes	N/A
Туре	VolumeCollection.VolumeColl ection	N/A
Descript ion	The set of volumes instantiated by this storage subsystem.	N/A
LongDesc ription	This property shall contain a link to a Resource of type VolumeCollection that contains the set of storage volumes allocated to this instance of an storage subsystem.	N/A
Mandator y	Optional Required for NVMe drives, as well as opaque arrays and other similar devices with an NVMe front end.	
Notes	This is a collection of Namespaces that belong to this NVM Subsystem. Refer to the Volume schema for details of the instance information.	

#### **6.4 NVM Controllers**

The Redfish/Swordfish StorageControllers schema is used to represent an NVM Controller.

There are three different types of NVM Controllers: Admin, Discovery, and IO.

#### 6.4.1 Admin Controller

**6.4.1.1 Mockup** The following mockup shows a sample representation of the Storage-Controller schema used to represent an Admin Controller.

```
{
    "@odata.type":

    "#StorageController.v1_3_0.StorageController",
    "Name": "NVMe Admin Controller",
    "Description": "Single NVMe Admin Controller for in-band
    → admin command access.",
    "Status": {
        "State": "Enabled",
        "Health": "OK"
    },
    "Id": "NVMeAdminController",
    "Model": "NVMe Connect Array",
    "SerialNumber": "NVME123456",
    "PartNumber": "NVM44",
    "FirmwareVersion": "1.0.0",
    "SupportedControllerProtocols": [
        "PCIe"
    ],
    "NVMeControllerProperties": {
        "ControllerType": "Admin",
        "NVMeVersion": "1.3",
        "NVMeControllerAttributes": {
            "SupportsSQAssociations": false,
            "SupportsTrafficBasedKeepAlive": false,
```

```
"SupportsExceedingPowerOfNonOperationalState":
         → false,
        "Supports128BitHostId": false,
        "SupportsReservations": false
    },
  "NVMeSMARTCriticalWarnings": {
    "MediaInReadOnly": false,
    "OverallSubsystemDegraded": false,
    "SpareCapacityWornOut": false
 },
  "MaxQueueSize": 1
},
"Links": {
    "NetworkDeviceFunctions": [
        {
            "@odata.id": "/red-
             fish/v1/Chassis/NVMeOpaqueArray/NetworkAdapters/OpaqueArr
        },
        {
            "@odata.id": "/red-
             fish/v1/Chassis/NVMeOpaqueArray/NetworkAdapters/OpaqueArr
        },
        {
            "@odata.id": "/red-
             → fish/v1/Chassis/NVMeOpaqueArray/NetworkAdapters/OpaqueArr
        },
        {
            "@odata.id": "/red-
             fish/v1/Chassis/NVMeOpaqueArray/NetworkAdapters/OpaqueArr
        }
    1
},
"@odata.id": "/red-
 fish/v1/Storage/OpaqueArray/Controllers/NVMeAdminController",
```

```
"@Redfish.Copyright": "Copyright 2015-2024 SNIA. All

    rights reserved."
}
```

#### 6.4.1.2 Property Mapping

**6.4.1.2.1 Actions.**#StorageController.RunSelfTest The mapping for Actions. #StorageController.RunSelfTest is summarized in Table 24.

 Table 24:
 Actions.#StorageController.RunSelfTest mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope rty	Actions.#StorageController.R unSelfTest	NVM Spec Property / Field: Device Self-test Command NVM Spec: Section:Figure NVM Base Specification 2.0: Section 5.9
Туре	Action (Special form of POST)	NVMe Administrative command
Descr iptio n	This action is used to initiate a self-test against this controller. This action should return either the ResourceSelfTestFailed or ResourceSelfTestCompleted event.	The Device Self-test command is used to start a device self-test operation or abort a device self-test operation
LongD escri ption	This action is used to initiate a self-test against this controller. This action should return either the ResourceSelfTestFailed or ResourceSelfTestCompleted event.	The Device Self-test command is used to start a device self-test operation or abort a device self-test operation (refer to NVMe 2.0 Base Specification section 8.6).
Manda tory	Optional	Optional

Redfish/Swordfish	NVMe / NVMe-oF
Notes	The Device Self-test command is
	used specifically to: a) start a short
	device self-test operation;b) start
	an extended device self-test
	operation;c) start a vendor specific
	device self-test operation; ord)
	abort a device self-test operation
	already in process.

## **6.4.1.2.2 Assembly** The mapping for Assembly is summarized in Table 25.

Table 25: Assembly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Descript ion	The Assembly schema defines an assembly. Assembly information contains details about a device, such as part number, serial number, manufacturer, and production date. It also provides access to the original data for the assembly.	N/A
LongDesc ription	This Resource shall represent an assembly for a Redfish implementation. Assembly information contains details about a device, such as part number, serial number, manufacturer, and production date. It also provides access to the original data for the assembly.	N/A
Mandator y	Optional Do Not Implement for NVMe drives, or devices with NVMe front ends, such as opaque arrays.	
Notes		

## **6.4.1.2.3 AssetTag** The mapping for AssetTag is summarized in Table 26.

**Table 26:** Assembly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	AssetTag	N/A
Туре	Edm.String	N/A
Descript ion	The user-assigned asset tag for this storage controller.	N/A
LongDesc ription	This property shall track the storage controller for inventory purposes.	N/A
Mandator y	Opitonal Do Not Implement for NVMe Drives, or devices with NVMe front ends, such as opaque arrays.	
lotes		

# **6.4.1.2.4 CacheSummary** The mapping for CacheSummary is summarized in Table 27.

Table 27: CacheSummary mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CacheSummary	N/A
Туре	ComplexType	N/A
Descript ion	The cache memory of the storage controller in general detail.	N/A
LongDesc ription	This property shall contain properties that describe the cache memory for this resource.	N/A
Mandator y	Do Not Implement	
Notes		This property exists for hw cache reporting in other RF/SF use cases. Not used in NVMe controllers.

# **6.4.1.2.5 ControllerRates** The mapping for ControllerRates is summarized in Table 28.

Table 28: ControllerRates mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	ControllerRates	N/A
Туре	ComplexType	N/A
Descript ion	This property describes the various controller rates used for processes such as volume rebuild or consistency checks.	N/A
LongDesc ription	This object shall contain all the rate settings available on the controller.	N/A
Mandator y	Do Not Implement	
Notes		

## **6.4.1.2.6 Description** The mapping for Description is summarized in Table 29.

Table 29: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Optional	
Notes	In Redfish, Description is a read-only field.	Return the common description: "An NVM Admin Controller exposes capabilities that allow a host to manage an NVM subsystem. Admin controllers support commands providing management capabilities but does not provide IO access."

**6.4.1.2.7 FirmwareVersion** The mapping for FirmwareVersion is summarized in Table 30.

Table 30: FirmwareVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	FirmwareVersion	NVM Spec Property / Field:
		Identify Command / Identify
		Controller Data structure (CNS
		01h): Firmware Revision (FR)
		<b>NVM Spec: Section:Figure</b>
		NVMe 2.0: Section 5.17.2.1:Figure
		275: Bytes 71:64
Туре	String	String
Descript ion	The firmware version of this storage controller.	The currently active firmware revision for the domain of which this controller is a part.
LongDesc	This property shall contain the	The currently active firmware
ription	firmware version as defined by	revision for the domain of which
	the manufacturer for the associated storage controller.	this controller is a part.
Mandator y	Mandatory	Mandatory
Notes		

## **6.4.1.2.8 Identifiers** The mapping for Identifiers is summarized in Table 31.

Table 31: Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
roperty	Identifiers	N/A
ype	Collection(Resource.Identifier)	N/A
escript ion	The Durable names for the storage controller.	N/A
ongDesc iption	This property shall contain a list of all known durable names for the associated storage controller.	N/A
landator y	Optional	
lotes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.1.2.9 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 32.

Table 32: Identifiers. Durable Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	N/A
Туре	Variable - see notes	N/A
Descript ion	The world-wide, persistent name of the resource.	N/A
LongDesc ription	This property shall contain the world-wide unique identifier for the resource. The string shall be in the Identifier.DurableNameForma t property value format.	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.1.2.10 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 33.

Table 33: Identifiers.DurableNameFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	N/A
Туре	enum (DurableNameFormat)	N/A
Descript ion	The format of the durable name property.	N/A
LongDesc ription	This property shall represent the format of the DurableName property.	N/A
Mandator y	Do Not Implement.	
Notes	There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.1.2.11 Links.AttachedVolumes** The mapping for Links.AttachedVolumes is summarized in Table 34.

Table 34: Links. Attached Volumes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.AttachedVolumes	N/A
Туре	Collection(Volume.Volume)	N/A
Descript ion	An array of links to volumes that are attached to this controller instance.	N/A
LongDesc ription	This property shall contain a link to the Resources of type Volume that are attached to this instance of storage controller.	N/A
Mandator y	Optional Do Not Implement for admin controllers.	
Notes		

**6.4.1.2.12 Links.NetworkDeviceFunctions** The mapping for Links.NetworkDeviceFunctions is summarized in Table 35.

**Table 35:** Links.NetworkDeviceFunctions mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.NetworkDeviceFunction s	N/A
Type	Collection(NetworkDeviceFunction)	N/A
Descript ion	The network device functions that provide connectivity to this controller.	N/A
LongDesc ription	This property shall contain an array of links to resources of type NetworkDeviceFunction that represent the devices that provide connectivity to this controller.	N/A
Mandator y	Optional. Recommended for NVMe-oF configurations and more complex devices with NVMe front ends, such as opaque arrays.	
Notes	-	

## **6.4.1.2.13 Location** The mapping for Location is summarized in Table 36.

Table 36: Location mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Location	N/A
Туре	Collection(Resource.Locatio n)	N/A
Descript ion	The location of the storage controller.	N/A
LongDesc ription	This property shall contain location information of the associated storage controller.	N/A
Mandator y	Optional Do Not Implement for NVM Drives or more complex devices with an NVMe front end, such as opaque arrays.	
Notes		

**6.4.1.2.14 Manufacturer** The mapping for Manufacturer is summarized in Table 37.

Table 37: Manufacturer mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Manufacturer	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / PCI Vendor ID (VID) NVM Spec: Section: Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 00:01
Туре	String	16-bit number in little endian format.
Descript ion	The manufacturer of this storage controller.	The company vendor identifier
LongDesc ription	This property shall contain the name of the organization responsible for producing the storage controller. This organization might be the entity from whom the storage controller is purchased, but this is not necessarily true.	The company vendor identifier that is assigned by the PCI SIG. This is the same value as reported in the ID register
Mandator y	Optional	NVMe: Mandatory NVMe-oF: DNI

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	End clients expect to see the	
	name of the company (e.g,;	
	Contoso, BestVendor). While the	
	value may be filled from the	
	IdentifyController PCI Vendor ID,	
	it would be preferable to have	
	this filled with the actual string	
	value of the company name.	

#### **6.4.1.2.15 Model** The mapping for Model is summarized in Table 38.

Table 38: Model mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Model	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Model Number (MN) NVM Spec: Section: Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 24:63
Туре	String	String
Descript ion	The model number for the storage controller.	Model Number (MN)
LongDesc ription	This property shall contain the name by which the manufacturer generally refers to the storage controller.	Contains the model number for the NVM subsystem that is assigned by the vendor as an ASCII string. Refer to NVMe 2.0 Section 7.10 for unique identifier requirements. Refer to NVMe 2.0 Section 1.5 for ASCII string requirements
Mandator y	Recommended	Mandatory
Notes		

**6.4.1.2.16 Name** The mapping for Name is summarized in Table 39.

Table 39: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	NVM Spec Property / Field: Identify Command / Identify Controller Data Data structure (CNS 01h) / Controller ID (CNTLID) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 78:79
Туре	String	16-bit hex value
Descript ion	The name of the resource or array member.	Controller ID
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	The NVM subsystem unique controller identifier associated with the controller.
Mandator y	Mandatory	Mandatory
Notes	In Redfish, Name is a read-only field.	Map the CNTLID field to a string with the format: "0xABCD"

**6.4.1.2.17 NVMeControllerProperties.ControllerType** The mapping for NVMeControllerProperties.ControllerType is summarized in Table 40.

 Table 40:
 NVMeControllerProperties.ControllerType mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.Co ntrollerType	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Type (CNTRL_TYPE) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes
Туре	StorageController.v1_0_0.  NVMeControllerType	Hex value
Descript ion	This property specifies the type of NVMe Controller.	Controller Type
LongDesc ription	This property shall specify the type of NVMe Controller.	This field specifies the controller type. Values reported: 0h Reserved (controller type not reported)1h I/O controller2h Discovery controller3h Administrative controller
Mandator y	Mandatory	Mandatory
Notes	This property must be used to specify the type of NVMe Controller. For an admin controller, set to Admin.	For Admin Controller - value in Identify Controller is "03h". Return "Admin"

**6.4.1.2.18 NVMeControllerProperties.NVMeVersion** The mapping for NVMeControllerProperties.NVMeVersion is summarized in Table 41.

**Table 41:** NVMeControllerProperties.NVMeVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeVersion	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Version (VER) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 80:83
Туре	String	32-bit value.
Descript ion	The version of the NVMe Base Specification supported.	Version (VER)
LongDesc	This property shall specify the type of NVMe Controller.	Indicates the major, minor, and tertiary version of the NVM Express base specification that the controller implementation supports. bits 31:16 indicate the major versionbits 15:08 indicate the minor version bits 07:00 indicate the tertiary version number
Mandator y Notes	Optional	Mandatory Implementations compliant to NVM Express Base Specification revision 1.2 or later shall report a non-zero value in this field. Valid versions of the specification are: 1.0, 1.1, 1.2, 1.2.1, 1.3, 1.4, and 2.0.

#### 6.4.1.2.19 NVMeControllerProperties.NVMeControllerAttributes.ReportsNamespaceGranularity

The mapping for NVMeControllerProperties.NVMeControllerAttributes.ReportsNamespace is summarized in Table 42.

**Table 42:** NVMeControllerProperties.NVMeControllerAttributes.ReportsNamespaceGranularity mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Repo rtsNamespaceGranularity	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 07 (Namespace Granularity) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 07
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports reporting of Namespace Granularity.	Indicates whether or not the controller supports reporting of Namespace Granularity.
LongDesc ription	This property shall indicate whether or not the controller supports reporting of Namespace Granularity.	This property shall indicate whether or not the controller supports reporting of Namespace Granularity.
Mandator y	Optional Recommended for NVM Drives and more complex devices with NVMe front ends, such as opaque arrays.	
Notes		

#### ${\bf 6.4.1.2.20\ NVMeController Properties. NVMeController Attributes. Supports SQAssociations}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsSQAssocissummarized in Table 43.

**Table 43:**NVMeControllerProperties.NVMeControllerAttributes.SupportsSQAssociations Mapping

	Redfish/Swordfish	NVMe / NVMe-oF	
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsSQAssociations	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 08 (SQ Associations) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Byte: 96:99: Bit 08	
Туре	Boolean	Single bit (bool)	
Descript ion	Indicates whether or not the controller supports SQ Associations.	Indicates whether or not the controller supports SQ Associations.	
LongDesc ription	This property shall indicate whether or not the controller supports SQ Associations.	This property shall indicate whether or not the controller supports SQ Associations.	
Mandator y	Optional	Mandatory	
Notes			

# $\textbf{6.4.1.2.21} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{SupportsTrafficBasedKeepAlive}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.TrafficBasedKeep is summarized in Table 44.

**Table 44:** NVMeControllerProperties.NVMeControllerAttributes.SupportsTrafficBasedKeepAlive mapping

Redfish/Swordfish	NVMe / NVMe-oF	
NVMeControllerProperties.NV MeControllerAttributes.Supp ortsTrafficBasedKeepAlive	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 06 (Traffic Based Keep Alive Support – TBKAS) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 06	
Boolean	Single bit (bool)	
Indicates whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	Indicates if the the host and controller are allowed to restart the Traffic Based Keep Alive Timer in the presence of Admin or I/O command processing.	
This property shall indicate whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	This property shall indicate whether or not the the host and controller are allowed to restart the Traffic Based Keep Alive Timer in the presence of Admin or I/O command processing.	
	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsTrafficBasedKeepAlive  Boolean Indicates whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval. This property shall indicate whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during	

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Mandatory for	Mandatory
	Ethernet-Attach Drives;	
	Mandatory for more complex	
	devices with NVMe front ends,	
	such as opaque arrays.	
Notes		

#### $\textbf{6.4.1.2.22} \quad \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{SupportsExceedingPowerOfNonOperation} \\ \textbf{1.2.22} \quad \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{2.22} \quad \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{3.22} \quad \textbf{3.23} \quad \textbf{3.23$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsExceeding is summarized in Table 45.

Table 45: NVMeControllerProper-

ties. NV Me Controller Attributes. Supports Exceeding Power Of Non Operational State mapping

Property		NVMe / NVMe-oF
Property	NVMeControllerProperties.NV	NVM Spec Property / Field:
	MeControllerAttributes.	Identify Command / Identify

	non-operational power state.	the purpose of executing
		controller initiated background
		operations in a non-operationa
		power state (i.e.,
		Non-Operational Power State
		Permissive Mode supported).
Mandator y	Optional	Mandatory
Notes		

# $\textbf{6.4.1.2.23} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \textbf{Supports128BitHostId}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.Supports128BitHo is summarized in Table 46.

**Table 46:** NVMeControllerProperties.NVMeControllerAttributes.Supports128BitHostId mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp orts128BitHostId	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 00 NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 00
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports a 128-bit Host Identifier.	Indicates whether or not the controller supports a 128-bit Host Identifier.
LongDesc ription	This property shall indicate whether or not the controller supports a 128-bit Host Identifier.	This property shall indicate whether or not the controller supports a 128-bit Host Identifier.
Mandator y	Mandatory	Mandatory
Notes		

**6.4.1.2.24 NVMeControllerProperties.MaxQueueSize** The mapping for NVMeControllerProperties.MaxQueueSize is summarized in Table 47.

 Table 47:
 NVMeControllerProperties.ANACharacteristics mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.Ma xQueueSize	NVM Spec Property / Field: Property Get Command / Controller Capabilities (CAP) - Offset 0h / Maximum Queue Entries Supported (MQES) NVM Spec: Section:Figure NVMe 2.0: Section 3.1.3.1: Figure 36: Bits 15:00
Туре	Int64	16-bit value
Descript ion	Indicates the maximum individual queue size that an NVMe IO Controller supports.	Indicates the maximum individual queue size that the controller supports.
LongDesc ription	This property shall contain the maximum individual queue entry size supported per queue. This is a zero-based value, where the minimum value is one, indicating two entries.	Indicates the maximum individual queue size that the controller supports. This is a 0's based value. The minimum value is 1h, indicating two entries.
Mandator y	Optional Mandatory for more complex devices with NVMe front ends, such as opaque arrays.	Mandatory

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	For PCIe, this applies to both submission and completion queues. For NVMe-oF, this applies to only submission queues.	For NVMe over PCIe implementations, this value applies to the I/O Submission Queues and I/O Completion Queues that the host creates. For NVMe over Fabrics implementations, this value applies to only the I/O Submission Queues that the host creates.

**6.4.1.2.25 NVMeControllerProperties.ANACharacteristics** The mapping for NVMe-ControllerProperties.ANACharacteristics is summarized in Table 48.

 Table 48:
 NNVMeControllerProperties.ANACharacteristics mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.AN ACharacteristics	NVM Spec Property / Field: Asymmetric Namespace Access Log (Log ID 0ch) NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.13: Figures 221 and 222
Туре	Collection(StorageControlle r.v1_0_0.ANACharacteristi cs)	Log Page.
Descript ion	This property contains the combination of ANA type and volume information.	This log consists of a header describing the log and descriptors containing the asymmetric namespace access information for ANA Groups
LongDesc ription	This property shall contain the combination of ANA type and volume information.	This log consists of a header describing the log and descriptors containing the asymmetric namespace access information for ANA Groups that contain namespaces that are attached to the controller processing the command. ANA Group Descriptors shall be returned in ascending ANA Group Identifier order
Mandator y	Do Not Implement	Prohibited
Notes		

### ${\bf 6.4.1.2.26\ NVMeController Properties. NVMeSMARTCritical Warnings. Overall System Degraded}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.OverallSystemDesis summarized in Table 49.

**Table 49:**NVMeControllerProperties.NVMeSMARTCriticalWarnings.OverallSystemDegraded mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV	NVM Spec Property / Field:
	MeSMARTCriticalWarnings.Ove	SMART / Health Information Log
	rallSystemDegraded	(Log ID 02h) / Critical Warning /
		Subsystem Reliability has been
		degraded NVM Spec:
		Section:Figure NVMe 2.0:
		Section 5.16.1.3: Figure 207:
		Bytes 00, Bits 02
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the NVM	Indicates that the NVM
	subsystem reliability has been	subsystem reliability has been
	compromised.	degraded due to significant
		media related errors or any
		internal error that degrades NVM
		subsystem reliability.
LongDesc	This property shall indicate that	This property Indicates that the
ription	the NVM subsystem reliability	NVM subsystem reliability has
	has been compromised.	been degraded due to significan
		media related errors or any
		internal error that degrades NVM
		subsystem reliability.
Mandator y	Mandatory	Optional
Notes		

### ${\bf 6.4.1.2.27\ NVMeController Properties. NVMeSMARTC ritical Warnings. Power Backup Failed}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.PowerBackupFail is summarized in Table 50.

**Table 50:** NVMeControllerProperties.NVMeSMARTCriticalWarnings.PowerBackupFailed mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Pow erBackupFailed	NVM Spec Property / Field: SMART / Health Information Log (Log ID 02h) / Critical Warning / volatile memory backup device has failed NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3: Figure 207: Bytes 00, Bits 04
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the volatile memory backup device has failed.	Indicates that the volatile memory backup device has failed.
LongDesc ription	This property shall indicate that the volatile memory backup device has failed.	This warning indicates that the volatile memory backup device has failed.
Mandator y	Optional Recommended for NVM Drives.Required for more complex devices with NVMe front ends, such as opaque arrays.	Optional
Notes		This field is only valid if the controller has a volatile memory backup solution.

## **6.4.1.2.28 SKU** The mapping for SKU is summarized in Table 51.

**Table 51:** SKU mapping

N/A N/A storage N/A	
·	
storage N/A	
all contain the N/A nit number for age controller.	
ent	
r	nit number for age controller.

## **6.4.1.2.29 SpeedGbps** The mapping for SpeedGbps is summarized in Table 52.

Table 52: SpeedGbps mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SpeedGbps	N/A
Туре	Decimal	N/A
Descript ion	The maximum speed of the storage controller's device interface.	N/A
LongDesc ription	This property shall represent the maximum supported speed of the storage bus interface, in Gbit/s. The specified interface connects the controller to the storage devices, not the controller to a host. For example, SAS bus not PCIe host bus.	N/A
Mandator y	Do Not Implement	
Notes		

**6.4.1.2.30 Status.Health** The mapping for Status. Health is summarized in Table 53.

Table 53: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	NVM Spec Property / Field:
		Property Get command /
		Controller Status (CSTS): - Offset
		1Ch NVM Spec: Section:Figure
		NVMe 2.0: Section 3.1.3.6: Figure
		47NVM Spec Property / Field:
		Get Log Page command /
		SMART/Health Information Log
		(Log Identifier 02h) NVM Spec:
		Section:Figure NVMe 2.0:
		Section 5.16.1.3: Figure 207
Туре	Resource.Health	32-bit value
Descript ion	The health state of this resource in the absence of its dependent resources.	This field indicates critical warnings for the state of the controller from both the SMART & general health information log and the Controller Status Property
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	This field indicates critical warnings for the state of the controller from the SMART and general health information. The information provided is over the life of the controller and is retained across power cycles.
Mandator y	Mandatory	Optional

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible Values: OK / Warning /	This comes from CSTS Controlle
	Critical	Status. Redfish/Swordfish "OK"
		corresponds to NVMe/NVMe-oF
		"Ready" (RDY) bit set to "1" and
		no warnings in the CSTS or
		SMART/Health information log
		pageRedfish /Swordfish
		"Warning" corresponds to
		"Volatile Memory Backup Device
		has failed", "NVM subsystem
		reliability has been degraded",
		"Temperature greater than or
		equal to an over temperature
		threshold", "temperature less
		than or equal to an under
		temperature threshold", or
		"available spare capacity has
		fallen below the threshold"R
		edfish/Swordfish "Critical"
		corresponds to NVMe/NVMe-oF
		"Controller Fatal Status"
		(CSTS.CFS) bit set to "1" which
		indicates that a serious error
		condition has occurred.

## **6.4.1.2.31 Status.State** The mapping for Status. State is summarized in Table 54.

Table 54: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	NVM Spec Property / Field: Property Get Command / CSTS - Controller Status (Offset 1Ch) NVM Spec: Section:Figure NVMe 2.0: Section 3.1.3.6: Figure 47
Туре	Resource.State (enum)	32-bit value
Descript ion	The known state of the resource, such as, enabled.	Controller Status
LongDesc ription	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	Controller Status
Mandator y	Mandatory	Mandatory

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible values: Enabled /	Ready (CSTS.RDY) maps to
	Disabled / StandbyOffline /	Enabled, Shutdown (CSTS.SHST
	StandbySpare / InTest / Starting /	value will tell you if shutdown is
	ABsent / UnavaialableOffline /	in progress or complete
	Deferring / Quiesced / Updating /	(StandbyOffline), Processing
	Qualified	Paused (CSTS.PP) maps to
		Deferring. If both Ready and
		Shutdown are indicated, then
		the system should indicate
		StandbyOffline. If both Ready
		and Processing Paused are
		indicated, then the system
		should indicate Deferring.

**6.4.1.2.32 SupportedControllerProtocols** The mapping for SupportedControllerProtocols is summarized in Table 55.

**Table 55:** SupportedControllerProtocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedControllerProtocol s	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The supported set of protocols for communicating to this storage controller.	N/A
LongDesc ription	This property shall contain the supported set of protocols for communicating to this storage controller.	N/A
Mandator y	Mandatory	
Notes	This is an array of protocols supported by the StorageController. This can be set to values including, but not limited to, PCIe, RDMA, NVMe-oF, RoCE, RoCEv2, and InfiniBand.	

**6.4.1.2.33 SupportedDeviceProtocols** The mapping for SupportedDeviceProtocols is summarized in Table 56.

**Table 56:** SupportedDeviceProtocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedDeviceProtocols	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The protocols that the storage controller can use to communicate with attached devices.	N/A
LongDesc ription	This property shall contain the set of protocols this storage controller can use to communicate with attached devices.	N/A
Mandator y	Do Not Implement	
Notes		

#### 6.4.2 Discovery Controller

**6.4.2.1 Mockup** The following mockup shows a sample representation of the Storage-Controller schema used to represent a Discovery Controller.

```
"@odata.id": "/redfish/v1/Storage/NVMeoF-
→ Discovery/Controllers/NVMeDiscoveryController",
"@odata.type":

    "#StorageController.v1_7_0.StorageController",

### **6.4.2.2 Property Mapping**

### **6.4.2.2.1 Assembly** The mapping for Assembly is summarized in Table 57.

Table 57: Assembly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Assembly	N/A
Туре	ComplexType	N/A
Descript ion	The Assembly schema defines an assembly. Assembly information contains details about a device, such as part number, serial number, manufacturer, and production date. It also provides access to the original data for the assembly.	N/A
LongDesc ription	This Resource shall represent an assembly for a Redfish implementation. Assembly information contains details about a device, such as part number, serial number, manufacturer, and production date. It also provides access to the original data for the assembly.	N/A
Mandator y	Optional Do Not Implement for NVMe drives, or devices with NVMe front ends, such as opaque arrays.	
Notes		

## **6.4.2.2.2 AssetTag** The mapping for AssetTag is summarized in Table 58.

Table 58: AssetTag mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	AssetTag	N/A
Туре	Edm.String	N/A
Descript ion	The user-assigned asset tag for this storage controller.	N/A
LongDesc ription	This property shall track the storage controller for inventory purposes.	N/A
Mandator y	Optional Do Not Implement for NVMe Drives, or devices with NVMe front ends, such as opaque arrays.	
Notes		

# **6.4.2.2.3 CacheSummary** The mapping for CacheSummary is summarized in Table 59.

Table 59: CacheSummary mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CacheSummary	N/A
Туре	ComplexType	N/A
Descript ion	The cache memory of the storage controller in general detail.	N/A
LongDesc ription	This property shall contain properties that describe the cache memory for this resource.	N/A
Mandator y	Do Not Implement	
Notes		This property exists for hw cache reporting in other RF/SF use cases. Not used in NVMe controllers.

## **6.4.2.2.4 ControllerRates** The mapping for ControllerRates is summarized in Table 60.

Table 60: ControllerRates mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	ControllerRates	N/A
Туре	ComplexType	N/A
Descript ion	This property describes the various controller rates used for processes such as volume rebuild or consistency checks.	N/A
LongDesc ription	This object shall contain all the rate settings available on the controller.	N/A
Mandator y	Do Not Implement	
Notes		

## **6.4.2.2.5 Description** The mapping for Description is summarized in Table 61.

Table 61: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Optional	
Notes	In Redfish, Description is a read-only field.	Return the common description "An NVM Discovery Controller exposes capabilities that allow a host to retrieve information required to connect to one or more NVM Subsystems. Discovery controllers only support commands providing discovery capabilities; they do not provide IO or management access."

## **6.4.2.2.6 FirmwareVersion** The mapping for FirmwareVersion is summarized in Table 62.

Table 62: FirmwareVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	FirmwareVersion	NVM Spec Property / Field:
		Identify Command / Identify
		Controller Datastructure (CNS
		01h): Firmware Revision (FR)
		NVM Spec: Section:Figure
		NVMe 2.0: Section 5.17.2.1:Figure
		275: Bytes 71:64
Туре	String	String
Descript ion	The firmware version of this storage controller.	The currently active firmware revision for the domain of which this controller is a part.
LongDesc ription	This property shall contain the firmware version as defined by the manufacturer for the associated storage controller.	The currently active firmware revision for the domain of which this controller is a part.
Mandator y	Mandatory	Mandatory
Notes		Return the currently active
		firmware revision information.

## **6.4.2.2.7 Identifiers** The mapping for Identifiers is summarized in Table 63.

**Table 63:** Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers	N/A
Туре	Collection(Resource.Identifier)	N/A
Descript ion	The Durable names for the storage controller.	N/A
LongDesc ription	This property shall contain a list of all known durable names for the associated storage controller.	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.2.2.8 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 64.

Table 64: Identifiers.DurableName mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	N/A
Туре	Variable - see notes	N/A
Descript ion	The world-wide, persistent name of the resource.	N/A
LongDesc ription	This property shall contain the world-wide unique identifier for the resource. The string shall be in the Identifier.DurableNameForma t property value format.	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.2.2.9 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 65.

Table 65: Identifiers.DurableNameFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	N/A
Туре	enum (DurableNameFormat)	N/A
Descript ion	The Durable names for the storage controller.	N/A
LongDesc ription	This property shall contain a list of the types for all known durable names for the associated storage controller. The type determines the length of the corresponding Namespace ID	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.2.2.10 Links.AttachedVolumes** The mapping for Links.AttachedVolumes is summarized in Table 66.

Table 66: Links. Attached Volumes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.AttachedVolumes	N/A
Туре	Collection(Volume.Volume)	N/A
Descript ion	An array of links to volumes that are attached to this controller instance.	N/A
LongDesc ription	This property shall contain a link to the Resources of type Volume that are attached to this instance of storage controller.	N/A
Mandator y	Do Not Implement	
Notes		

**6.4.2.2.11 Links.Endpoints** The mapping for Links.Endpoints is summarized in Table 67.

Table 67: Links. Endpoints mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Endpoints	N/A
Туре	Collection(Endpoint.Endpoin t)	N/A
Descript ion	An array of links to the endpoints that connect to this controller.	N/A
LongDesc ription	This property shall contain an array of links to the Resources of type Endpoint associated with this controller.	N/A
Mandator y	Mandatory	
Notes		

**6.4.2.2.12 Links.Connections** The mapping for Links.Connections is summarized in Table 68.

Table 68: Links. Connections mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Connections	N/A
Туре	Collection(Connection.Connection)	N/A
Descript ion	An array of links to volumes that are attached to this controller instance.	N/A
LongDesc ription	This property shall contain a link to the Resources of type Volume that are attached to this instance of storage controller.	N/A
Mandator y	Optional	
Notes	This contains the information used to represented the allowed hosts.	This property contains pointers to the Connections objects. The information about allowed hosts is mapped to the Connections objects for NVMe-oF configurations.

**6.4.2.2.13 Links.NetworkDeviceFunctions** The mapping for Links.NetworkDeviceFunctions is summarized in Table 69.

Table 69: Links. Network Device Functions mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.NetworkDeviceFunction s	N/A
Туре	Collection(NetworkDeviceFunction)	N/A
Descript ion	The network device functions that provide connectivity to this controller.	N/A
LongDesc ription	This property shall contain an array of links to resources of type NetworkDeviceFunction that represent the devices that provide connectivity to this controller.	N/A
Mandator y	Optional Recommended to implement for more complex devices with NVMe front ends, such as opaque arrays.	
Notes	For NVMe-oF configurations.	

**6.4.2.2.14 Links.NVMeDiscoveredSubsystems** The mapping for Links.NVMeDiscoveredSubsystems is summarized in Table 70.

**Table 70:** Links.NVMeDiscoveredSubsystems mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.NVMeDiscoveredSubsyst ems	NVM Spec Property / Field:  NVMe 2.0 Base Specification:  5.16.1.23 Discovery Log Page (Log Identifier 70h) GetLogPage
Туре	Collection(Storage.Storage)	N/A
Descript ion	The NVMe subsystems discovered by this discovery controller.	The Discovery Log Page provides an inventory of NVM subsystems with which a host may attempt to form an association. The Discovery Log Page may be specific to the host requesting the log.
LongDesc ription	This property shall contain an array of links to resources of type Storage that represent the NVMe subsystems discovered by this discovery controller. This property shall only be present if ControllerType in NVMeControllerProperties contains Discovery.	
Mandator y	Mandatory	Mandatory
Notes	This contains the list of all Subsystems discovered by this Discovery Controller.	The Discovery Log Page is persistent across power cycles.

## **6.4.2.2.15 Location** The mapping for Location is summarized in Table 71.

Table 71: Location mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Location	N/A
Туре	Collection(Resource.Locatio n)	N/A
Descript ion	The location of the storage controller.	N/A
LongDesc ription	This property shall contain location information of the associated storage controller.	N/A
Mandator y	Optional Do Not Implement for NVM Drives, or more complex devices with NVMe front ends, such as opaque arrays.	
Notes		

# **6.4.2.2.16 Manufacturer** The mapping for Manufacturer is summarized in Table 72.

Table 72: Manufacturer mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Manufacturer	N/A
Туре	String	N/A
Descript ion	The manufacturer of this storage controller.	N/A
LongDesc ription	This property shall contain the name of the organization responsible for producing the storage controller. This organization might be the entity from whom the storage controller is purchased, but this is not necessarily true.	N/A
Mandator y	Optional	Reserved (DNI)
Notes	End clients expect to see the name of the company (e.g.; Contoso, BestVendor). While the value may be filled from the IdentifyController PCI Vendor ID or SubsystemID field, it would be preferable to have this filled with the actual string value of the company name.	

## **6.4.2.2.17 Model** The mapping for Model is summarized in Table 73.

Table 73: Model mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Model	N/A
Туре	String	N/A
Descript ion	The model number for the storage controller.	N/A
LongDesc ription	This property shall contain the name by which the manufacturer generally refers to the storage controller.	N/A
Mandator y	Do Not Implement	Reserved (DNI) for Discovery Controllers
Notes		

## **6.4.2.2.18 Name** The mapping for Name is summarized in Table 74.

Table 74: Name mapping

		Redfish/Swordfish
Property	Name	NVM Spec Property / Field: Identify Commmand / Identify Controller Datastructure (CNS 01h) / Controller ID (CNTLID) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 78:79
Туре	String	16-bit hex value
Descript ion	The name of the resource or array member.	Controller ID
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	The NVM subsystem unique controller identifier associated with the controller.
Mandator y	Mandatory	Mandatory
Notes	In Redfish, Name is a read-only field.	Map the CNTLID field to a string with the format: "0xABCD"

**6.4.2.2.19 NVMeControllerProperties.ControllerType** The mapping for NVMeControllerProperties.ControllerType is summarized in Table 75.

 Table 75:
 NVMeControllerProperties.ControllerType mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.Co ntrollerType	NVM Spec Property / Field: Identify Command / Identify Conntroller Datastructure (CNS 01h) / Controller Type (CNTRL_TYPE) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Byte:
Туре	StorageController.v1_0_0.  NVMeControllerType	Hex value
Descript ion	This property specifies the type of NVMe Controller.	Controller Type
LongDesc ription	This property shall specify the type of NVMe Controller.	This field specifies the controller type. Values reported: 0h Reserved (controller type not reported)1h I/O controller2h Discovery controller3h Administrative controller
Mandator y	Mandatory	Mandatory
Notes	This property must be used to specify the type of NVMe Controller. For a discovery controller, set to Discovery.	For Discovery Controller - value in Identify Controller is "02h". Return "Discovery"

**6.4.2.2.20 NVMeControllerProperties.NVMeVersion** The mapping for NVMeControllerProperties.NVMeVersion is summarized in Table 76.

**Table 76:** NVMeControllerProperties.NVMeVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeVersion	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Version (VER) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 80:83
Туре	String	32-bit value.
Descript ion	The version of the NVMe Base Specification supported.	Version (VER)
LongDesc ription	This property shall contain the version of the NVMe Base Specification supported.	Indicates the major, minor, and tertiary version of the NVM Express base specification that the controller implementation supports.
Mandator y	Recommended Mandatory if NVMe version is 1.2 or later.	Mandatory
Notes		Implementations compliant to NVM Express Base Specification revision 1.2 or later shall report a non-zero value in this field. Valid versions of the specification are: 1.0, 1.1, 1.2, 1.2.1, 1.3, 1.4, and 2.0. bits 31:16 indicate the major versionbits 15:08 indicate the minor version bits 07:00 indicate the tertiare version number

#### ${\bf 6.4.2.2.21\ NVMeController Properties. NVMeController Attributes. Supports Traffic Based Keep A live}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.TrafficBasedKeep is summarized in Table 77.

**Table 77:** 

NV Me Controller Properties. NV Me Controller Attributes. Supports Traffic Based Keep Alive Supports Traffic Based Keep Alive mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsTrafficBasedKeepAlive	N/A
Туре	Boolean	N/A
Descript ion	Indicates whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	N/A
LongDesc ription	This property shall indicate whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	N/A
Mandator y	Do Not Implement	DNI (Reserved)
Notes		

### $\textbf{6.4.2.2.22} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} Supports \textbf{ExceedingPowerOfNonOperation} \\ \textbf{Attributes.} \\ \textbf{Supports ExceedingPowerOfNonOperation} \\ \textbf{Attributes.} \\$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsExceedir is summarized in Table 78.

Table 78: NVMeControllerProper-

ties. NV Me Controller Attributes. Supports Exceeding Power Of Non Operational State Supports Exceeding Power Of Non Operational State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
	Neurisii/ Sworunsii	TWIME / TWIME-OI
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsExceedingPowerOfNonOper ationalState	N/A
Туре	Boolean	N/A
Descript ion	Indicates whether or not the controller supports exceeding Power of NonOperational State in order to execute controller initiated background operations in a non-operational power state.	N/A
LongDesc ription	This property shall indicate whether or not the controller supports exceeding Power of NonOperational State in order to execute controller initiated background operations in a non-operational power state.	N/A
Mandator y	Optional	DNI (Reserved))
Notes		

## $\textbf{6.4.2.2.23} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \textbf{Supports128BitHostId}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.Supports128BitHo is summarized in Table 79.

**Table 79:** NVMeControllerProperties.NVMeControllerAttributes.Supports128BitHostId Supports128BitHostId mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp orts128BitHostId	N/A
Туре	Boolean	N/A
Descript ion	Indicates whether or not the controller supports a 128-bit Host Identifier.	N/A
LongDesc ription	This property shall indicate whether or not the controller supports a 128-bit Host Identifier.	N/A
Mandator y	Do Not Implement	DNI (Reserved)
Notes		

**6.4.2.224 NVMeControllerProperties.MaxQueueSize** The mapping for NVMeControllerProperties.MaxQueueSize is summarized in Table 80.

 Table 80:
 NVMeControllerProperties.MaxQueueSize mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.Ma	NVM Spec Property / Field:
	xQueueSize	Property Get command /
		Controller Capabilities (CAP) -
		Offset 0h: Maximum Queue
		Entries Supported (MQES) <b>NVM</b>
		Spec: Section:Figure NVMe 2.0
		Section 3.1.3.1: Figure 36: Bits
		15:00
Туре	Int64	16-bit value
Descript ion	Indicates the maximum	Indicates the maximum
	individual queue size that an	individual queue size that the
	NVMe IO Controller supports.	controller supports.
LongDesc	This property shall contain the	indicates the maximum
ription	maximum individual queue entry	individual queue size that the
	size supported per queue. This is	controller supports. For NVMe
	a zero-based value, where the	over PCIe implementations, this
	minimum value is one, indicating	value applies to the I/O
	two entries. For PCIe, this	Submission Queues and I/O
	applies to both submission and	Completion Queues that the hos
	completion queues. For	creates. For NVMe over Fabrics
	NVMe-oF, this applies to only	implementations, this value
	submission queues.	applies to only the I/O
		Submission Queues that the hos
		creates. This is a 0's based value
		The minimum value is 1h,
		indicating two entries.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Mandatory for more complex devices with NVMe front ends, such as opaque arrays.	Mandatory
Notes		

### ${\bf 6.4.2.2.25\ NVMeController Properties. NVMeSMARTC ritical Warnings. Overall Subsystem Degraded}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.OverallSubsystem is summarized in Table 81.

Table 81:

 $NV Me Controller Properties. NV Me SMART Critical Warnings. Over all Subsystems Degraded \\Over all Subsystem Degraded mapping$ 

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Ove rallSubsystemDegraded	N/A
Туре	Boolean	N/A
Descript ion	Indicates that the NVM subsystem reliability has been compromised.	N/A
LongDesc ription	This property shall indicate that the NVM subsystem reliability has been compromised.	N/A
Mandator y	Do Not Implement	
Notes		

### $6.4.2.2.26\ NV Me Controller Properties. NV Me SMART Critical Warnings. Spare Capacity Worn Out$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.SpareCapacityWois summarized in Table 82.

Table 82:

 ${\tt NVMeController Properties. NVMeSMARTCritical Warnings. Spare Capacity Worn Out Spare Capacity Worn Out mapping}$ 

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Spa reCapacityWornOut	N/A
Туре	Boolean	N/A
Descript ion	Indicates that the available spare capacity has fallen below the threshold.	N/A
LongDesc ription	This property shall indicate that the available spare capacity has fallen below the threshold.	N/A
Mandator y	Do Not Implement	
Notes		

## ${\bf 6.4.2.2.27\ NVMeController Properties. NVMeSMARTC ritical Warnings. Power Backup Failed}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.PowerBackupFail is summarized in Table??.

**Table 83:** NVMeControllerProperties.NVMeSMARTCriticalWarnings.PowerBackupFailed mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Pow erBackupFailed	N/A
Туре	Boolean	N/A
Descript ion	Indicates that the volatile memory backup device has failed.	N/A
LongDesc ription	This property shall indicate that the volatile memory backup device has failed.	N/A
Mandator y	Do Not Implement	
Notes		

**6.4.2.2.8 Status.Health** The mapping for Status. Health is summarized in Table 84.

Table 84: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	N/A
Туре	Resource.Health	N/A
Descript ion	The health state of this resource in the absence of its dependent resources.	N/A
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	N/A
Mandator y	Mandatory	
Notes	Possible Values: OK / Warning / Critical	

### **6.4.2.2.29 Status.State** The mapping for Status. State is summarized in Table 85.

Table 85: Status. State mapping

Redfish/Swordfish	NVMe / NVMe-oF
Status.State	NVM Spec Property / Field: Property Get Command / CSTS – Controller Status (Offset 1Ch) NVM Spec: Section:Figure NVMe 2.0: Section 3.1.3.6: Figure 47
Resource.State (enum)	32-bit value
The known state of the resource, such as, enabled.	Controller Status
This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent	Controller Status
indicates the resource is physically unavailable.	
	Resource. State (enum)  The known state of the resource, such as, enabled.  This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible values: Enabled /	Ready (CSTS.RDY) maps to
	Disabled / StandbyOffline /	Enabled Shutdown (CSTS.SHST)
	StandbySpare / InTest / Starting /	value will tell you if shutdown is
	ABsent / UnavaialableOffline /	in progress or complete
	Deferring / Quiesced / Updating /	(StandbyOffline)
	Qualified	ProcessingPaused (CSTS.PP)
		maps to Deferring. If both Ready
		and Shutdown are indicated,
		then the system should indicate
		StandbyOffline. If both Ready
		and ProcessingPaused are
		indicated, then the system
		should indicate Deferring.

**6.4.2.2.30 SupportedControllerProtocols** The mapping for SupportedControllerProtocols is summarized in Table 86.

**Table 86:** SupportedControllerProtocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedControllerProtocol s	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The supported set of protocols for communicating to this storage controller.	N/A
LongDesc ription	This property shall contain the supported set of protocols for communicating to this storage controller.	N/A
Mandator y	Mandatory	
Notes	This is an array of protocols supported by the StorageController. This can be set to values including, but not limited to, PCIe, RDMA, NVMe-oF, RoCE, RoCEv2, and InfiniBand.	

**6.4.2.2.31 SupportedDeviceProtocols** The mapping for SupportedDeviceProtocols is summarized in Table 87.

**Table 87:** Supported Device Protocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedDeviceProtocols	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The protocols that the storage controller can use to communicate with attached devices.	N/A
LongDesc ription	This property shall contain the set of protocols this storage controller can use to communicate with attached devices.	N/A
Mandator y	Do Not Implement	
Notes		

#### 6.4.3 IO Controller

**6.4.3.1 Mockup** The following mockup shows a sample representation of the Storage-Controller schema used to represent an IO Controller.

```
"@odata.type":

¬ "#StorageController.v1_7_0.StorageController",
"Id": "NVMeIOController",
"Name": "NVMe I/O Controller",
"Description": "An NVM IO controller is a general-purpose

→ controller that provides access to logical block data

□ and metadata stored on an NVM subsystem's non-volatile
→ storage medium. IO Controllers may also support

    management capabilities.",
"Status": {
  "State": "Enabled",
  "Health": "OK"
},
"Manufacturer": "Best NVMe Vendor",

### 6.4.3.2 Property Mapping

**6.4.3.2.1 Actions.#StorageController.RunSelfTest** The mapping for Actions.#StorageController.Fis summarized in Table 88.

 Table 88: Actions.#StorageController.RunSelfTest mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope rty	Actions.#StorageController.R unSelfTest	NVM Spec Property / Field: Device Self-test Command NVM Spec: Section:Figure NVM Base Specification 2.0: 5.9 Device Self-test Command
Туре	Action (Special form of POST)	NVMe Administrative command
Descr iptio n	This action is used to initiate a self-test against this controller. This action should return either the ResourceSelfTestFailed or ResourceSelfTestCompleted event.	The Device Self-test command is used to start a device self-test operation or abort a device self-test operation
LongD escri ption	This action is used to initiate a self-test against this controller. This action should return either the ResourceSelfTestFailed or ResourceSelfTestCompleted event.	The Device Self-test command is used to start a device self-test operation or abort a device self-test operation (refer to NVMe 2.0 Base Specification section 8.6).
Manda tory	Optional	Optional

Redfish/Swordfish	NVMe / NVMe-oF
Notes	The Device Self-test command is used specifically to: a) start a short device self-test operation;b) start an extended device self-test operation;c) start a vendor specific device self-test operation; ord) abort a device self-test operation already in process.

The mapping for Assembly is summarized in Table 89.

Table 89: Assembly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Assembly	N/A
Туре	ComplexType	N/A
Descript ion	The Assembly schema defines an assembly. Assembly information contains details about a device, such as part number, serial number, manufacturer, and production date. It also provides access to the original data for the assembly.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This Resource shall represent an	N/A
ription	assembly for a Redfish	
	implementation. Assembly	
	information contains details	
	about a device, such as part	
	number, serial number,	
	manufacturer, and production	
	date. It also provides access to	
	the original data for the	
	assembly.	
Mandator y	Optional Do Not Implement for	
	NVMe drives, or devices with	
	NVMe front ends, such as opaque	
	arrays.	
Notes		

### **6.4.3.2.2 AssetTag** The mapping for AssetTag is summarized in Table 90.

Table 90: Assembly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	AssetTag	N/A
Туре	Edm.String	N/A
Descript ion	The user-assigned asset tag for this storage controller.	N/A
LongDesc ription	This property shall track the storage controller for inventory purposes.	N/A
Mandator y	Optional Do Not Implement for NVMe Drives, or devices with NVMe front ends, such as opaque arrays.	
Notes		

# **6.4.3.2.3 CacheSummary** The mapping for CacheSummary is summarized in Table 91.

Table 91: CacheSummary mapping

Redfish/Swordfish	NVMe / NVMe-oF
CacheSummary	N/A
ComplexType	N/A
The cache memory of the storage controller in general detail.	N/A
This property shall contain properties that describe the cache memory for this resource.	N/A
Do Not Implement	
	This property exists for hw cache reporting in other RF/SF use cases. Not used in NVMe controllers.
	CacheSummary ComplexType The cache memory of the storage controller in general detail. This property shall contain properties that describe the cache memory for this resource.

# **6.4.3.2.4 ControllerRates** The mapping for ControllerRates is summarized in Table 92.

Table 92: ControllerRates mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	ControllerRates	N/A
Туре	ComplexType	N/A
Descript ion	This property describes the various controller rates used for processes such as volume rebuild or consistency checks.	N/A
LongDesc ription	This object shall contain all the rate settings available on the controller.	N/A
Mandator y	Do Not Implement	
Notes		

### **6.4.3.2.5 Description** The mapping for Description is summarized in Table 93.

Table 93: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Description is a read-only field.	Return the common description: "An NVM IO controller is a general-purpose controller that provides access to logical block data and metadata stored on an NVM subsystem's non-volatile storage medium. IO Controllers may also support management capabilities."

**6.4.3.2.6 FirmwareVersion** The mapping for FirmwareVersion is summarized in Table 94.

Table 94: FirmwareVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	FirmwareVersion	NVM Spec Property / Field: Identify Command / Identify Controller Data structure (CNS 01h) / Firmware Revision (FR) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1:Figure 275: Bytes 64 - 71
Туре	String	String
Descript ion	The firmware version of this storage controller.	The currently active firmware revision for the domain of which this controller is a part.
LongDesc ription	This property shall contain the firmware version as defined by the manufacturer for the associated storage controller.	The currently active firmware revision for the domain of which this controller is a part.
Mandator y	Mandatory	Mandatory
Notes		Return the currently active firmware revision information.

### **6.4.3.2.7 Identifiers** The mapping for Identifiers is summarized in Table 95.

Table 95: Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers	N/A
		N/A
Descript ion	The Durable names for the storage controller.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall contain a list of all known durable names for the associated storage controller.	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

## **6.4.3.2.8 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 96.

Table 96: Identifiers. Durable Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	N/A
Туре	Variable	N/A
Descript ion	The Durable names for the storage controller.	N/A
LongDesc ription	The Durable names for the storage controller.	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.3.2.9 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 97.

**Table 97:** Identifiers.DurableNameFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	N/A
Туре	enum (DurableNameFormat)	N/A
Descript ion	The Durable names for the storage controller.	N/A
LongDesc ription	This property shall contain a list of the types for all known durable names for the associated storage controller. The type determines the length of the corresponding Namespace ID	N/A
Mandator y	Optional	
Notes	Recommend not implementing. There isn't a good mapping for these in the NVMe spec to a property that has an appropriate / mapping to a durable name format.	

**6.4.3.2.10 Links.AttachedVolumes** The mapping for Links.AttachedVolumes is summarized in Table 98.

Table 98: Links. Attached Volumes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.AttachedVolumes	NVM Spec Property / Field: Identify Command / Active Namespace ID list (CNS 07h) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.7
Туре	Collection(Volume.Volume)	Namespace List
Descript ion	An array of links to volumes that are attached to this controller instance.	A list of 1,024 namespace IDs is returned to the host containing active NSIDs in increasing order that are greater than the value specified in the Namespace Identifier (NSID) field of the command.
LongDesc ription	This property shall contain a link to the Resources of type Volume that are attached to this instance of storage controller.	A list of 1,024 namespace IDs is returned to the host containing active NSIDs in increasing order that are greater than the value specified in the Namespace Identifier (NSID) field of the command. The NSID field may be cleared to 0h to retrieve a Namespace List including the namespace starting with NSID or 1h. Reference NVMe 2.0: Section 4.4.2: Figure 135 (Namespace List Format)
Mandator y	Mandatory	Required
-	-	•

	Redfish/Swordfish	NVMe / NVMe-oF	
Notes	This contains a pointer to the set of namespaces attached to this IO Controller.		

**6.4.3.2.11 Links.Endpoints** The mapping for Links.Endpoints is summarized in Table 99.

Table 99: Links. Endpoints mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Endpoints	N/A
Туре	Collection(Endpoint.Endpoin t)	N/A
Descript ion	An array of links to the endpoints that connect to this controller.	N/A
LongDesc ription	This property shall contain an array of links to the Resources of type Endpoint associated with this controller.	N/A
Mandator y	Optional	
Notes	For NVMe-oF configurations.	

**6.4.3.2.12 Links.Connections** The mapping for Links.Connections is summarized in Table 101.

Table 100: Links. Connections mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Connections	N/A
Туре	Collection(Connection.Connection)	N/A
Descript ion	An array of links to volumes that are attached to this controller instance.	N/A
LongDesc ription	This property shall contain a link to the Resources of type Volume that are attached to this instance of storage controller.	N/A
Mandator y	Optional Do Not Implement for NVMe Drives.	
Notes	This contains the information used to represented the allowed hosts.	This property contains pointers to the Connections objects. The information about allowed hosts is mapped to the Connections objects for NVMe-oF configurations.

#### 6.4.3.2.13 Links.NetworkDeviceFunctions

Table 101: Links. Network Device Functions mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.NetworkDeviceFunction s	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
Туре	Collection(NetworkDeviceFunction)	N/A
Descript ion	The network device functions that provide connectivity to this controller.	N/A
LongDesc ription	This property shall contain an array of links to resources of type NetworkDeviceFunction that represent the devices that provide connectivity to this controller.	N/A
Mandator y	Optional Recommended for more complex devices with NVMe front ends, such as opaque arrays.	
Notes	For NVMe-oF configurations.	

### **6.4.3.2.14 Location** The mapping for Location is summarized in Table 102.

Table 102: Location mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Location	N/A
Туре	Collection(Resource.Locatio n)	N/A
Descript ion	The location of the storage controller.	N/A
LongDesc ription	This property shall contain location information of the associated storage controller.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Do Not Implement for	
	NVM Drives, or more complex	
	devices with NVMe front ends,	
	such as opaque arrays.	
Notes		

# **6.4.3.2.15 Manufacturer** The mapping for Manufacturer is summarized in Table 103.

Table 103: Manufacturer mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Manufacturer	NVM Spec Property / Field:** Identify Command / Identify Controller Datastructure (CNS 01h) / PCI Vendor ID (VID) NVM Spec: Section: Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 00:01
Type	String	16-bit number in little endian format.
Descript ion	The manufacturer of this storage controller.	The company vendor identifier
LongDesc ription	This property shall contain the name of the organization responsible for producing the storage controller. This organization might be the entity from whom the storage controller is purchased, but this is not necessarily true.	The company vendor identifier that is assigned by the PCI SIG. This is the same value as reported in the ID register

Notes  End clients expect to see the name of the company (e.g.; Contoso, BestVendor). While to value may be filled from the IdentifyController PCI Vendor it would be preferable to have

## **6.4.3.2.16 Model** The mapping for Model is summarized in Table 104.

Table 104: Model mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Model	NVM Spec Property / Field:
		Identify Command / Identify
		Controller Datastructure (CNS
		01h) / Model Number (MN) <b>NVM</b>
		Spec: Section: Figure NVMe 2.0:
		Section 5.17.2.1: Figure 275: Bytes
		24:63
Туре	String	String
Descript ion	The model number for the storage controller.	Model Number (MN)

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall contain the name by which the manufacturer generally refers to the storage controller.	Contains the model number for the NVM subsystem that is assigned by the vendor as an ASCII string. Refer to section 7.10 for unique identifier requirements. Refer to section 1.5 for ASCII string requirements
Mandator y	Recommended	Mandatory
Notes		

### **6.4.3.2.17 Name** The mapping for Name is summarized in Table 105.

Table 105: Name mapping

dfish/Swordfish me	NVMe / NVMe-oF  NVM Spec Property / Field: Identify Command / Identify
me	Identify Command / Identify
	, ,
	0 . 11
	Controller Datastructure (CNS
	01h) / Controller ID (CNTLID)
	NVM Spec: Section:Figure
	NVMe 2.0: Section 5.17.2.1: Figure
	275: Bytes 78:79
ing	16-bit hex value
e name of the resource or	Controller ID
e	<b>G</b>

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	The NVM subsystem unique controller identifier associated with the controller.
Mandator y	Mandatory	Mandatory
Notes	In Redfish, Name is a read-only field.	Map the CNTLID field to a string with the format: "0xABCD"

**6.4.3.2.18 NVMeControllerProperties.ControllerType** The mapping for NVMeControllerProperties.ControllerType is summarized in Table 106.

**Table 106:** NVMeControllerProperties.ControllerType mapping

Redfish/		
Swordfis h	NVMe / NVMe-oF	
Property	NVMeControllerProperties.Co ntrollerType	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Type (CNTRL_TYPE) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 111
Type	StorageController.v1_0_0.  NVMeControllerType	Hex value
Descript ion	This property specifies the type of NVMe Controller.	Controller Type
LongDesc ription	This property shall specify the type of NVMe Controller.	This field specifies the controller type. Supported values: 0h Reserved (controller type not reported)1h I/O controller2h Discovery controller3h Administrative controller
Mandator y	Mandatory	Mandatory
Notes	This property must be used to specify the type of NVMe Controller. For an IO controller, set to IO.	For IO Controller - value in Identify Controller is "01h". Return "IO"

**6.4.3.2.19 NVMeControllerProperties.NVMeVersion** The mapping for NVMeControllerProperties.NVMeVersion is summarized in Table 107.

**Table 107:** NVMeControllerProperties.NVMeVersion mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeVersion	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Version (VER) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 80:83
Туре	String	32-bit value. bits 31:16 indicate the major versionbits 15:08 indicate the minor version bits 07:00 indicate the tertiare version number
Descript ion	The version of the NVMe Base Specification supported.	Version (VER)
LongDesc ription	This property shall specify the type of NVMe Controller.	Indicates the major, minor, and tertiary version of the NVM Express base specification that the controller implementation supports.
Mandator y	Optional	Mandatory
Notes		Implementations compliant to NVM Express Base Specification revision 1.2 or later shall report a non-zero value in this field. Valid versions of the specification are: 1.0, 1.1, 1.2, 1.2.1, 1.3, 1.4, and 2.0.

#### ${\bf 6.4.3.2.20\ NVMeController Properties. NVMeController Attributes. Reports UUID List}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.ReportsUUIDList is summarized in Table 108.

**Table 108:** NVMeControllerProperties.NVMeControllerAttributes.ReportsUUIDList mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Repo rtsUUIDList	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): UUID List (Bit 9) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 99:96 (CTRATT): Bit 9 (UUID List)
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports reporting of a UUID list.	Indicated whether or not the controller supports reporting of a UUID List.
LongDesc ription	This property shall indicate whether or not the controller supports reporting of a UUID list.	Indicated whether or not the controller supports reporting of a UUID List.
Mandator y Notes	Optional	Mandatory for IO Controllers

### ${\bf 6.4.3.2.21\ NVMeController Properties. NVMeController Attributes. Supports SQAssociations}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsSQAssocis summarized in Table 109.

**Table 109:** SupportsSQAssociations mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsSQAssociations	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure / Controller Attributes (CTRATT): Bit 08 (SQ Associations) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 08 (SQ Associations)
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports SQ Associations.	Indicates whether or not the controller supports SQ Associations.
LongDesc ription	This property shall indicate whether or not the controller supports SQ Associations.	This property shall indicate whether or not the controller supports SQ Associations.
Mandator y	Optional	Mandatory
Notes		

### $\textbf{6.4.3.2.22} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{ReportsNamespaceGranularity}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.ReportsNamespace is summarized in Table 110.

 Table 110:
 NVMeControllerProperties.NVMeControllerAttributes.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Repo rtsNamespaceGranularity	NVM Spec Property / Field: Identify Comand / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 07 (Namespace Granularity) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 07
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports reporting of Namespace Granularity.	Indicates whether or not the controller supports reporting of Namespace Granularity.
LongDesc ription	This property shall indicate whether or not the controller supports reporting of Namespace Granularity.	This property shall indicate whether or not the controller supports reporting of Namespace Granularity.
Mandator y	Optional Recommended for NVM Drives and more complex devices with NVMe front ends, such as opaque arrays.	Mandatory
Notes		

### ${\bf 6.4.3.2.23\ NVMeController Properties. NVMeController Attributes. Supports Reservations}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsReservatis summarized in Table 111.

 Table 111:
 NVMeControllerProperties.NVMeControllerAttributes.

	Redfish/Swordfish	NVMe / NVMe-oF
Prope rty	NVMeControllerProperties.NVMe ControllerAttributes.Supports Reservations	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Optional NVM Command Support (ONCS): Bit 05 NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 520: 521: Bit 05
Туре	Boolean	Single bit (bool)
Descr iptio n	Indicates whether or not the controller supports namespace reservations.	Indicates whether or not the controller supports reservations.
LongD escri ption	This property shall indicate whether or not the controller supports namespace reservations to enable two or more hosts to coordinate access to a shared namespace.	Indicates whether or not the controller supports reservations.
Manda tory	Optional Recommended for NVM Drives and more complex devices with NVMe front ends, such as opaque arrays.	Mandatory
Notes		

### $\textbf{6.4.3.2.24} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{SupportsTrafficBasedKeepAlive}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.TrafficBasedKeep is summarized in Table 112.

**Table 112:** SupportsTrafficBasedKeepAlive mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsTrafficBasedKeepAlive	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 06 - Traffic Based Keep Alive Support (TBKAS) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96: 99: Bit 06
	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	Indicates if the controller supports restarting the Keep Alive Timer if an Admin command or an I/O command is processed during the Keep Alive Timeout Interval.
LongDesc ription	This property shall indicate whether or not the controller supports restarting KeepAlive Timer if traffic is processed from an admin command or IO during KeepAlive Timeout interval.	controller supports restarting the Keep Alive Timer if an Admin command or an I/O command is processed during the Keep Alive Timeout Interval.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Mandatory for Ethernet-Attach Drives; Mandatory for more complex devices with NVMe front ends, such as opaque arrays.	Mandatory

### $\textbf{6.4.3.2.25} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{SupportsPredictableLatencyMode}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.PredictableLater is summarized in Table 113.

 Table 113:
 NVMeControllerProperties.NVMeControllerAttributes.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsPredictableLatencyMode	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 05 - (Predictable Latency Mode) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96:99: Bit 05
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports Predictable Latency Mode.	Indicates if the controller supports Predictable Latency Mode.
LongDesc ription	This property shall indicate whether or not the controller supports Predictable Latency Mode.	Indicates if the controller supports Predictable Latency Mode
Mandator y	Optional	Mandatory
Notes		

### ${\bf 6.4.3.2.26\ NVMeController Properties. NVMeController Attributes. Supports Endurance Groups}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.EnduranceGroups is summarized in Table 114.

 Table 114:
 NVMeControllerProperties.NVMeControllerAttributes.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsEnduranceGroups	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 04 (Endurance Groups) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96: 99: Bit 04
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports Endurance Groups.	Indicates if the controller supports Endurance Groups
LongDesc ription	This property shall indicate whether or not the controller supports Endurance Groups.	Indicates if the controller supports Endurance Groups
Mandator y	Optional Mandatory when EnduranceGroups/Sets are supported.	Mandatory
Notes	For NVMe SSD Drives: If "Advanced Features for NVMe Drives" feature is advertised, this is required. (This means EnduranceGroups and NVM Sets are supported.)	

### $\textbf{6.4.3.2.27} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \\ \textbf{SupportsReadRecoveryLevels}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsReadRecois summarized in Table 115.

**Table 115:** NVMeControllerProperties.NVMeControllerAttributes.SupportsReadRecoveryLevels

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsReadRecoveryLevels	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 03 (Read Recovery Levels) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 9 6: 99: Bit 03
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports Read Recovery Levels.	Indicates whether or not the controller supports Read Recovery Levels.
LongDesc ription	This property shall indicate whether or not the controller supports Read Recovery Levels.	Indicates whether or not the controller supports Read Recovery Levels.
Mandator y Notes	Optional	Mandatory

### ${\bf 6.4.3.2.28\ NVMeController Properties. NVMeController Attributes. Supports NVMS ets}$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsNVMSets is summarized in Table 116.

**Table 116:** NVMeControllerProperties.NVMeControllerAttributes.SupportsNVMSets

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsNVMSets	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 02 (NVM Sets) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96: 99: Bit 02
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports NVM Sets.	Indicates whether or not the controller supports NVM Sets.
LongDesc ription	This property shall indicate whether or not the controller supports NVM Sets.	This property shall indicate whether or not the controller supports NVM Sets.
Mandator y	Optional Mandatory when EnduranceGroups/Sets are supported.	Mandatory
Notes	For NVMe SSD Drives: If "Advanced Features for NVMe Drives" feature is advertised, this is required. (This means EnduranceGroups and NVM Sets are supported.)	

### $\textbf{6.4.3.2.29} \ \ \textbf{NVMeControllerProperties.NVMeControllerAttributes.} \textbf{SupportsExceedingPowerOfNonOperation} \textbf{Attributes.SupportsExceedingPowerOfNonOperation} \textbf{Attributes.SupportsExceedingPowerOfNonOpera$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.SupportsExceeding is summarized in Table 117.

**Table 117:** SupportsExceedingPowerOfNonOperationalState

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeControllerAttributes.Supp ortsExceedingPowerOfNonOper ationalState	NVM Spec Property / Field: Identify Command / Identify Controller Datastructure (CNS 01h) / Controller Attributes (CTRATT): Bit 01 (Non-Operational Power State Permissive Mode) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 96: 99: Bit 01
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the controller supports exceeding Power of NonOperational State in order to execute controller initiated background operations in a non-operational power state.	Indicates whether or not the controller supports host control of whether the controller may temporarily exceed the power of a non-operational power state for the purpose of executing controller initiated background operations in a non-operational power state (i.e., Non-Operational Power State Permissive Mode supported)

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall indicate whether or not the controller supports exceeding Power of NonOperational State in order to execute controller initiated background operations in a non-operational power state.	The controller supports host control of whether the controller may temporarily exceed the power of a non-operational power state for the purpose of executing controller initiated background operations in a non-operational power state (i.e. Non-Operational Power State Permissive Mode supported)
Mandator y Notes	Optional	Mandatory

### ${\bf 6.4.3.2.30\ NVMeController Properties. NVMeController Attributes. Supports 128 Bit Host Identity of the action of the properties of t$

The mapping for NVMeControllerProperties.NVMeControllerAttributes.Supports128BitHo is summarized in Table 118.

Table 118: Supports128BitHostId

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV	NVM Spec Property / Field:

		96: 99: Bit 00
Туре	Boolean	Single bit (bool)
Descript ion	Indicates whether or not the	Indicates whether or not the
	controller supports a 128-bit	controller supports a 128-bit
	Host Identifier.	Host Identifier
LongDesc	This property shall indicate	Indicates whether or not the
ription	whether or not the controller	controller supports a 128-bit
	supports a 128-bit Host Identifier.	Host Identifier
Mandator y	Mandatory	Mandatory
Notes		

**6.4.3.2.31 NVMeControllerProperties.MaxQueueSize** The mapping for NVMeControllerProperties.MaxQueueSize is summarized in Table 119.

Table 119: NVMeControllerProperties.MaxQueueSize mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.Ma xQueueSize	NVM Spec Property / Field:  JProperty Get / Controller  Properties / Controller  Capabilities offset 0h (CAP) /  Maximum Queues Entries  Supported (MQES) NVM Spec:  Section:Figure NVMe 2.0;  Section 3.1.3.1 Controller  Capabilities: Figure 36: Bits 00:15
Туре	Int64	16 bit value
Descript ion	Indicates the maximum individual queue size that an NVMe IO Controller supports.	This field indicates the maximum individual queue size that the controller supports.
LongDesc ription	This property shall contain the maximum individual queue entry size supported per queue. This is a zero-based value, where the minimum value is one, indicating two entries. For PCIe, this applies to both submission and completion queues. For NVMe-oF, this applies to only submission queues.	This field indicates the maximum individual queue size that the controller supports. For NVMe over PCIe implementations, this value applies to the I/O Submission Queues and I/O Completion Queues that the host creates. For NVMe over Fabrics implementations, this value applies to only the I/O Submission Queues that the host creates. This is a 0's based value. The minimum value is 1h, indicating two entries.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Mandatory for more complex devices with NVMe front ends, such as opaque arrays.	Required
Notes		

**6.4.3.2.32 NVMeControllerProperties.ANACharacteristics** The mapping for NVMe-ControllerProperties.ANACharacteristics is summarized in Table 120.

Table 120: NNVMeControllerProperties.ANACharacteristics mapping

	RRedfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.AN ACharacteristics	NVM Spec Property / Field: Asymmetric Namespace Access Log (Log ID 0ch) NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.13: Figures 220 and
Type	Collection(StorageControlle r.v1_0_0.ANACharacteristi cs)	Log Page
Descript ion	This property contains the combination of ANA type and volume information.	This log consists of a header describing the log and descriptors containing the asymmetric namespace access information for ANA Groups
LongDesc ription	This property shall contain the combination of ANA type and volume information.	This log consists of a header describing the log and descriptors containing the asymmetric namespace access information for ANA Groups that contain namespaces that are attached to the controller processing the command. ANA Group Descriptors shall be returned in ascending ANA Group Identifier order
Mandator y	Optional	Mandatory if ANA Reporting is supported
Notes		

**6.4.3.2.33 NVMeControllerProperties.ANACharacteristics.AccessState** The mapping for NVMeControllerProperties.ANACharacteristics.AccessState is summarized in Table 121.

Table 121: NNVMeControllerProperties.ANACharacteristics.AccessState mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.AN ACharacteristics.AccessStat e	NVM Spec Property / Field:** Asymmetric Namespace Access Log (Log ID 0ch) / ANA Group Descriptors 0 - n-1: Byte 16 Asymmetric Namespace Access State (Bits 00 - 03) NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.13: Figures 220 and
Туре	StorageController.v1_0_0. ANAAccessState	Reported ANA Access state
Descript ion	Reported ANA Access state.	This field indicates the Asymmetric Namespace Access state for all namespaces in this ANA Group when accessed through this controller.
LongDesc ription	This property shall contain the reported ANA Access State.	Within the Asymmetric Namespace Access Log (Log ID 0ch), for each ANA Group Descriptor the Asymmetric Namespace Access state for all namespaces in this ANA Group when accessed through this controller.
Mandator y	Optional	Mandatory if ANA Reporting is supported

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Available values: Optimized /	Available values: 01h ANA
	NonOptimized / Inacessible /	Optimized state02h ANA
	PersistentLoss	Non-Optimized state03h ANA
		Inaccessible state04h ANA
		Persistent Loss state0Fh ANA
		Change state

**6.4.3.2.34 NVMeControllerProperties.ANACharacteristics.Volume** The mapping for NVMeControllerProperties.ANACharacteristics.Volume is summarized in Table 122.

**Table 122:** NNVMeControllerProperties.ANACharacteristics.Volume mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.AN ACharacteristics.Volume	NVM Spec Property / Field:** Asymmetric Namespace Access Log (Log ID 0ch) / ANA Group Descriptors / Namespace Identifier 0 - n-1 NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.13: Figures 220, 221 and 222
Туре	Volume.Volume	ANA Group Descriptor
Descript ion	The specified volume.	The Namespace Identifier
LongDesc ription	This property shall contain a link to the specified volume.	The Namespace Identifier
Mandator y	Optional	Mandatory if ANA Reporting is supported
Notes	This field contains the pointer to the namespace for which the access state applies.	The namespace id should be linked to the corresponding namespace (volume) object with that namespace id. If this set of fields contains multiple namespaces (e.g., a group of namespaces), a unique entry in the ANACharacteristics array should be created for each namespace.

### ${\bf 6.4.3.2.35\ NVMeController Properties. NVMeSMARTC ritical Warnings. PRMUnreliable}$

The mapping for NVMeControllerProperties. NVMeSMARTCriticalWarnings. PMRUnreliable is summarized in Table 123.

**Table 123:** NNVMeControllerProperties.NVMeSMARTCriticalWarnings.PRMunreliable mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.PMR Unreliable	NVM Spec Property / Field: Property Get / Persistent Memory Region Status (PMRSTS) Offset E08h: Bits 09: 11 - Health Status (HSTS) NVM Spec: Section:Figure NVMe 2.0: Section 3.1.3.24: Figure 65: Bits 09: 11 (Health Status / HSTS), value 011b (Unreliable)
Туре	Boolean	Single bit (bool)
Descript ion	The Persistent Memory Region has become unreliable.	Persistent Memory Region has become read-only or unreliable
LongDesc ription	This property shall indicate that the Persistent Memory Region has become unreliable. PCI Express memory reads may return invalid data or generate poisoned PCI Express TLP(s). Persistent Memory Region memory writes may not update memory or may update memory with undefined data. The Persistent Memory Region may also have become non-persistent.	This field shall indicated that the Persistent Memory Region has become read-only or unreliable

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Recommended for NVM Drives; required for more complex devices with NVMe front	Optional
	ends, such as opaque arrays.	
Notes		

### ${\bf 6.4.3.2.36\ NVMeController Properties. NVMeSMARTC ritical Warnings. Power Backup Failed}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.PowerBackupFail is summarized in Table 124.

**Table 124:** NVMeControllerProperties.NVMeSMARTCriticalWarnings.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Pow erBackupFailed	NVM Spec Property / Field: SMART / Health Information Log Page (Log ID 02h) / Critical Warning / Volatile memory backup device has failed NVM Spec: Section:Figure NVMe 2.03 Section 5.16.1.3: Figure 207: Bytes 00, Bits 04
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the volatile memory backup device has failed.	Indicates that the volatile memory backup device has failed.
LongDesc ription	This property shall indicate that the volatile memory backup device has failed.	This property shall indicate that the volatile memory backup device has failed.
Mandator y	Optional Recommended for NVM Drives. Required for more complex devices with NVMe front ends, such as opaque arrays.	Optional
Notes		

### ${\bf 6.4.3.2.37\ NVMeController Properties. NVMeSMARTC ritical Warnings. Media In Read Only}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.MediaInReadOnly is summarized in Table 125.

**Table 125:** NVMeControllerProperties.NVMeSMARTCriticalWarnings.MediaInReadOnly mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV	NVM Spec Property / Field:

Mandator y	Mandatory	Optional
Notes		

### ${\bf 6.4.3.2.38\ NVMeController Properties. NVMeSMARTC ritical Warnings. Overall System Degraded}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.OverallSubsystem is summarized in Table 126.

Table 126: OverallSystemDegraded mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Ove rallSubsystemDegraded	NVM Spec Property / Field: SMART / Health Information Log Page (Log ID 02h) / Critical Warning / NVM subsystem reliability has been degraded due to significant media related errors or any internal error that degrades NVM subsystem reliability. NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3: Figure 207: Bytes 00, Bits 02
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the NVM subsystem reliability has been compromised.	Indicates that NVM subsystem reliability has been degraded.
LongDesc ription	This property shall indicate that the NVM subsystem reliability has been compromised.	NVM subsystem reliability has been degraded due to significan media related errors or any internal error that degrades NVM subsystem reliability.
Mandator y	Mandatory	Optional
Notes		

### ${\bf 6.4.3.2.39\ NVMeController Properties. NVMeSMARTCritical Warnings. Spare Capacity Worn Out}$

The mapping for NVMeControllerProperties.NVMeSMARTCriticalWarnings.SpareCapacityWois summarized in Table 127.

**Table 127:**NVMeControllerProperties.NVMeSMARTCriticalWarnings.SpareCapacityWornOut

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeControllerProperties.NV MeSMARTCriticalWarnings.Spa reCapacityWornOut	NVM Spec Property / Field: SMART / Health Information Log Page (Log ID 02h) / Critical Warning / available spare capacity has fallen below the threshold. NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3: Figure 207: Bytes 00, Bits 00
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the available spare capacity has fallen below the threshold.	Indicates that the available spare capacity has fallen below the threshold.
LongDesc ription	This property shall indicate that the available spare capacity has fallen below the threshold.	This property shall indicate that the available spare capacity has fallen below the threshold.
Mandator y	Optional Mandatory for NVMe drives, as well as for more complex devices with NVMe front ends, such as opaque arrays.	Optional
Notes		

**6.4.3.2.40 PCIeInterface.PCIeType** The mapping for PCIeInterface. PCIeType is summarized in Table 128.

Table 128: PCIeInterface.PCIeType mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PCIeInterface.PCIeType	N/A
Туре	enum (PCIeDevice.PCIeType)	N/A
Descript ion	The version of the PCIe specification in use by this device.	N/A
LongDesc ription	This property shall contain the negotiated PCIe interface version in use by this device.	N/A
Mandator y	Optional Mandatory for PCIe attach NVMe Drives; Do Not Implement for ethernet-attach drives. Optional for more complex devices with NVMe front ends, such as opaque arrays.	
Notes	Possible values: Gen1/Gen2/Gen3/Gen4/Gen5	The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.4.3.2.41 PCIeInterface.MaxPCIeType** The mapping for PCIeInterface.MaxPCIeType is summarized in Table 129.

**Table 129:** PCIeInterface.MaxPCIeType mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PCIeInterface.MaxPCIeType	N/A
Туре	enum (PCIeDevice.PCIeType)	N/A
Descript ion	The highest version of the PCIe specification supported by this device.	N/A
LongDesc ription	This property shall contain the maximum PCIe specification that this device supports.	N/A
Mandator y	Optional Mandatory for PCIe attach NVMe Drives; do not implement for ethernet-attach drives.	
Notes	Possible values: Gen1/Gen2/Gen3/Gen4/Gen5	The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.4.3.2.42 PCIeInterface.LanesInUse** The mapping for PCIeInterface.LanesInUse is summarized in Table 130.

**Table 130:** PCIeInterface.LanesInUse mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PCIeInterface.LanesInUse	N/A
Туре	int64	N/A
Descript ion	The number of PCIe lanes in use by this device.	N/A
LongDesc ription	This property shall contain the number of PCIe lanes in use by this device, which shall be equal to or less than the MaxLanes property value.	N/A
Mandator y	Optional Mandatory for PCIe attach NVMe Drives; do not implement for ethernet-attach drives.	
Notes		The functionality comes from the underlying implementation and does not originate in the NVMe specs

**6.4.3.2.43 PCIeInterface.MaxLanes** The mapping for PCIeInterface.MaxLanes is summarized in Table 131.

Table 131: PCIeInterface.MaxLanes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PCIeInterface.MaxLanes	N/A
Туре	int64	N/A
Descript ion	The number of PCIe lanes supported by this device.	N/A
LongDesc ription	This property shall contain the maximum number of PCIe lanes supported by this device.	N/A
Mandator y	Optional Mandatory for PCIe attach NVMe Drives; do not implement for ethernet-attach drives.	
Notes		The functionality comes from the underlying implementation and does not originate in the NVMe specs

# **6.4.3.2.44 Ports** The mapping for Ports is summarized in Table 132.

Table 132: Ports mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Ports	N/A
Туре	PortCollection.PortCollecti on	N/A
Descript ion	The link to the collection of ports that exist on the storage controller.	N/A
LongDesc ription	This property shall contain a link to a resource collection of type PortCollection.	N/A
Mandator y	Do Not Implement for NVMe drives Optional for more complex devices with NVMe front ends, such as opaque arrays.	
Notes		

# **6.4.3.2.45 SKU** The mapping for SKU is summarized in Table 133.

Table 133: SKU mapping

	Redfish/Swordfish	NVMe / NVMe-oF	
Property	SKU	N/A	
Туре	Edm.String	N/A	
Descript ion	The SKU for this storage controller.	N/A	
LongDesc ription	This property shall contain the stock-keeping unit number for this storage storage controller.	N/A	
Mandator y	Do Not Implement		
Notes			

# **6.4.3.2.46 SpeedGbps** The mapping for SpeedGbps is summarized in Table 134.

Table 134: SpeedGbps mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SpeedGbps	N/A
Туре	Decimal	N/A
Descript ion	The maximum speed of the storage controller's device interface.	N/A
LongDesc ription	This property shall represent the maximum supported speed of the storage bus interface, in Gbit/s. The specified interface connects the controller to the storage devices, not the controller to a host. For example, SAS bus not PCIe host bus.	N/A
Mandator y	Do Not Implement	
Notes		

**6.4.3.2.47 Status.State** The mapping for Status.State is summarized in Table 135.

Table 135: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	NVM Spec Property / Field: Property Get / CSTS – Controller Status (Offset 1ch) NVM Spec: Section:Figure NVMe 2.0: Section 3.1.3.6: Figure 47
Туре	Resource.State (enum)	32-bit value
Descript ion	The known state of the resource, such as, enabled.	
LongDesc	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	
Mandator y	Mandatory	Mandatory

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible values: Enabled /	Ready (CSTS.RDY) maps to
	Disabled / StandbyOffline /	Enabled, Shutdown (CSTS.SHST
	StandbySpare / InTest / Starting /	value will tell you if shutdown is
	ABsent / UnavaialableOffline /	in progress or complete
	Deferring / Quiesced / Updating /	(StandbyOffline), Processing
	Qualified	Paused (CSTS.PP) maps to
		Deferring. If both Ready and
		Shutdown are indicated, then
		the system should indicate
		StandbyOffline. If both Ready
		and Processing Paused are
		indicated, then the system
		should indicate Deferring.

**6.4.3.2.48 Status.Health** The mapping for Status. Health is summarized in Table 136.

Table 136: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	NVM Spec Property / Field:
		Property Get command /
		Controller Status (CSTS): - Offset
		1Ch NVM Spec: Section:Figure
		NVMe 2.0: Section 3.1.3.6: Figure
		47NVM Spec Property / Field:
		Get Log Page command /
		SMART/Health Information Log
		(Log Identifier 02h) NVM Spec:
		Section:Figure NVMe 2.0:
		Section 5.16.1.3: Figure 207
Туре	Resource.Health	32-bit value
Descript ion	The health state of this resource in the absence of its dependent resources.	This field indicates critical warnings for the state of the controller from both the SMART & general health information log and the Controller Status Property
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	This field indicates critical warnings for the state of the controller from the SMART and general health information. The information provided is over the life of the controller and is retained across power cycles.
Mandator y	Mandatory	Optional

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible Values: OK / Warning /	This comes from CSTS Controlle
	Critical	Status. Redfish/Swordfish "OK"
		corresponds to NVMe/NVMe-oF
		"Ready" (RDY) bit set to "1" and
		no warnings in the CSTS or
		SMART/Health information log
		pageRedfish/Swordfi sh
		"Warning" corresponds to
		"Volatile Memory Backup Device
		has failed", "NVM subsystem
		reliability has been degraded",
		"Temperature greater than or
	equal to an over temperature	
	threshold", "temperature less	
	than or equal to an under	
		temperature threshold", or
		"available spare capacity has
		fallen below the
		threshold"Redfish/S wordfish
	"Critical" corresponds to	
		NVMe/NVMe-oF "Controller Fata
		Status" (CSTS.CFS) bit set to "1"
		which indicates that a serious
		error condition has occurred.

**6.4.3.2.49 SupportedControllerProtocols** The mapping for SupportedControllerProtocols is summarized in Table 137.

**Table 137:** SupportedControllerProtocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedControllerProtocol s	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The supported set of protocols for communicating to this storage controller.	N/A
LongDesc ription	This property shall contain the supported set of protocols for communicating to this storage controller.	N/A
Mandator y	Optional	
Notes	This is an array of protocols supported by the StorageController. This can be set to values including, but not limited to, PCIe, RDMA, NVMe-oF, RoCE, RoCEv2, and InfiniBand.	

**6.4.3.2.50 SupportedDeviceProtocols** The mapping for SupportedDeviceProtocols is summarized in Table 138.

**Table 138:** Supported Device Protocols mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SupportedDeviceProtocols	N/A
Туре	Collection(Protocol.Protocol)	N/A
Descript ion	The protocols that the storage controller can use to communicate with attached devices.	N/A
LongDesc ription	This property shall contain the set of protocols this storage controller can use to communicate with attached devices.	N/A
Mandator y	Do Not Implement	
Notes		

#### 6.5 Namespace

The Redfish/Swordfish Volume schema is used to represent an NVM Namespace.

### **6.5.2 Property Mapping**

### **6.5.2.1 ALUA** The mapping for ALUA is summarized in Table 139.

Table 139: BlockSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	ALUA	N/A
Туре	Int64	N/A
Description	ALUA properties for this volume.	N/A
LongDescription	This shall identify the ALUA properties for this volume.	
Mandatory	Optional	N/A
Notes		

**6.5.2.2 ALUA.ANAGroupID** The mapping for ALUA.ANAGroupID is summarized in Table 140.

Table 140: ALUA.ANAGroupID mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope	ANAGroupID	Retrieved in the Identify
rty		CommandANA Group ID retrieved
		in the I/O Command Set
		Independent Identify Namespace
		data structure (CNS 08h) or in the
		Identify Namespace data structure
		for the specified NSID or the NVM
		Command Set Identify Namespace
		Data Structure (CNS 00h)NVMe
		Base Specification: Section 5.17.2.8:
		Figure 280: Bytes 07:04 - ANA Group
		Identifier (ANAGRPID) NVMe NVM
		Command Set Specification:
		Section 4.1.5.1: Figure 97: Bytes
		92:95 ANA Group Identifier
		(ANAGRPID)
Туре	Edm.Decimal	DWORD (4 bytes)
Descr	The ANA group id for this volume.	The ANA Group Identifier associated
iptio n		with all namespaces in an ANA
		Group described by an ANA Group
		Descriptor. All namespaces in an
		ANA Group described by an ANA
		Group Descriptor shall have the
		same ANA Group ID (ANAGroupID).

	Redfish/Swordfish	NVMe / NVMe-oF
LongD escri ption	This shall contain the ANA group id for this volume. This corresponds to the value in the ANAGroupId field in volume.	The ANA Group Identifier associated with all namespaces in an ANA Group described by an ANA Group Descriptor. When retrieved via the Identify Command (Command dword 11) For NSID other than FFFFFFFFh, this field indicates the ANA Group Identifier of the ANA group of which the namespace is a member. Each namespace that is attached to a controller that supports Asymmetric Namespace Access Reporting (refer to the CMIC field) shall report a valid ANAGRPID.
Manda tory	Optional	Optional
Notes		The ANA Group Identifier (ANAGRPID) for each ANA Group shall be unique within an NVM subsystem. If the controller does not support Asymmetric Namespace Access Reporting, then this field shall be cleared to 0h.

**6.5.2.3 BlockSizeBytes** The mapping for BlockSizeBytes is summarized in Table 141.

Table 141: BlockSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	BlockSizeBytes	NVM Spec Property / Field:
		Formatted LBA Size (FLBAS)
		retrieved in some Identify
		Namespace data structures for
		the specified NSID or the
		common namespace capabilities
		for the NVM Command Set (CNS
		00h).Refer to the applicable
		NVMe I/O Command Set
		specification for details. For
		NVMe I/O Command Sets that
		don't define this field, it is
		considered reserved NVM Spec:
		Section:Figure NVMe NVM
		Command Set Specification 1.0b
		Section 4.1.5.1: Figure 97: Bytes
		26 - Formatted LBA Size (FLBAS)
		and uses the Number LBA
		Formats (NBLAF) field defined in
		Section 4.1.5.1: Figure 97: Bytes
		25 (Number of LBA Formats)NVM
		Express NVM Zoned Namespace
		Command Set Specification 1.1b:
		Section A.5: Figure 53 (Size and
		Capacity Fields): Bytes 26.
Туре	Int64	Int 64

	Redfish/Swordfish	NVMe / NVMe-oF
Descript ion	The size, in bytes, of the smallest addressable unit, or block.	The LBA data size & metadata size combination that the namespace has been formatted with.
LongDesc ription	This property shall contain size of the smallest addressable unit of the associated drive or device.	This field indicates the LBA data size & metadata size combination that the namespace has been formatted with.
Mandator y	Mandatory	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Refer to the applicable NVMe I/C
		Command Set specification for
		details. For NVMe I/O Command
		Sets that don't define this field,
		is considered reserved. For NVM
		<b>Express Command Sets that</b>
		Support Blocks: Bits 6:5 indicate
		the most significant 2 bits of the
		Format Index of the supported
		LBA Format indicated in this da
		structure that was used to form
		the namespace. If the NLBAF
		field is less than or equal to 16,
		then the host should ignore
		these bits.Bit 4 indicates wheth
		or not the metadata is
		transferred at the end of the dat
		LBA, creating an extended data
		LBA. (note: Bit 4 is not applicab
		when there is no metadata).Bits
		3:0 indicate the least significant
		bits of the Format Index of the
		supported LBA Format indicate
		in this data structure that was
		used to format the namespace.

**6.5.2.4 Capacity.Data.ConsumedBytes** The mapping for Capacity.Data.ConsumedBytes is summarized in Table 142.

Table 142: Capacity. Data. Consumed Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Data.ConsumedBytes	NVM Spec Property / Field:
1 7		Namespace Utilization (NUSE)
		retrieved in some Identify
		Namespace data structures for
		the specified NSID or the
		common namespace capabilities
		for the NVM Command Set (CNS
		00h).Refer to the applicable
		NVMe I/O Command Set
		specification for details. For
		NVMe I/O Command Sets that
		don't define this field, it is
		considered reserved NVM Spec:
		Section:Figure NVMe NVM
		Command Set Specification 1.0b:
		Section 4.1.5.1: Figure 97: Bytes
		16 - 23 - Namespace Utilization
		(NUSE).NVM Express Key Value
		Command Set Specification 1.0b:
		Section 4.1.5.1 - I/O Command
		Set specific Identify Namespace
		data structure (CNS 05h, CSI 01h):
		Figure 36: Bytes 16 -23
		(Namespace Utilization)
Type	Int64	Int 64
Descript ion	The number of bytes consumed	The current number of logical
	in this data store for this data	blocks allocated in the
	type.	namespace.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	The value shall be the number of logical bytes currently consumed in this data store for this data type.	This field indicates the current number of logical blocks allocated in the namespace. This field is smaller than or equal to the Namespace Capacity. The number of logical blocks is based on the formatted LBA size. For KV Command set: This field indicates the total size of the namespace in bytes. This is the space to store KV keys and KV values. This field is undefined prior to the namespace being formatted.
Mandator y	Mandatory	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.
Notes	Reporting capacity in bytes is the Redfish and Swordfish standard mechanism. Clients expect the capacity information to be reported consistently for these devices, so the calculation here is to convert the NVMe properties (in blocks) to bytes.	Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reserved

**6.5.2.5 Capacity.Data.ProvisionedBytes** The mapping for Capacity.Data.ProvisionedBytes is summarized in Table 143.

 Table 143: Capacity. Data. Provisioned Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Data.ProvisionedBy tes	NVM Spec Property / Field:
		Namespace Size (NSZE) retrieved

		Figure 36: Bytes 00:07
Туре	Int64	Int 64
Descript ion	The maximum number of bytes	The total size of the NVM
	that can be allocated in this data	allocated to this namespace.
	store for this data type.	

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	The value shall be the maximum number of bytes that can be allocated in this data store for this data type.	This field indicates the total size of the namespace in logical blocks. A namespace of size n consists of LBA 0 through (n - 1). The number of logical blocks is based on the formatted LBA size. For ZNS: (NSZE-1) indicates the highest possible LBA in the zoned namespace.For KV: This is the space to store KV keys and KV values. This field is undefined prior to the namespace being formatted.
Mandator y	Optional	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.
Notes	This property is required when issuing a create namespace command. It is also required for "change namespace" when modifying the size of the namespace.	Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reserved

**6.5.2.6 Capacity.Data.AllocatedBytes** The mapping for Capacity.Data.AllocatedBytes is summarized in Table 144.

Table 144: Capacity. Data. Allocated Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Data.AllocatedByte s	NVM Spec Property / Field: Namespace Capacity (NCAP) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilities for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is
		considered reserved NVM Spec: Section: Figure NVMe NVM Command Set Specification 1.0b: Section 4.1.5.1: Figure 97: Bytes 08 - 15 - Namespace Capacity (NCAP). NVM Express NVM Zoned
		Namespace Command Set Specification 1.1b: Section A.5: Figure 53 (Size and Capacity Fields): Bytes 08 - 15 (Namespace Capacity).
Type	Int64	Int 64
Descript ion	The number of bytes currently allocated by the storage system in this data store for this data type.	The maximum number of logical blocks that may be allocated in the namespace at any point in time.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	The value shall be the number of bytes currently allocated by the storage system in this data store for this data type.	For NVM Command Set: The maximum number of logical blocks that may be allocated in the namespace at any point in timeFor Zoned Namespace Command Set: The maximum number of allocatable logical blocks in the zoned namespace.
Mandator y	Optional	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.
Notes	Reporting capacity in bytes is the Redfish and Swordfish standard mechanism. Not required when creating a namespace; service implementations will provide a suitable value. For non-thin-provisioned volumes, this will typically be equal to ProvisionedBytes.	Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reserved

# **6.5.2.7 Capacity.Metadata** The mapping for Capacity.Metadata is summarized in Table 145.

**Table 145:** Capacity.Metadata.AllocatedBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Metadata	N/A
Туре	Int64	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
Descript ion	The number of bytes currently allocated by the storage system in this data store for this data type.	N/A
LongDesc ription	The value shall be the number of bytes currently allocated by the storage system in this data store for this data type.	N/A
Mandator y	Optional	
Notes	Not required for NVMe Drives; optional to implement for more complex devices.	Do not return metadata information for NVMe devices. This is included in the overall reported capacity information.

# **6.5.2.8 CapacitySources** The mapping for CapacitySources is summarized in Table 146.

Table 146: CapacitySources mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CapacitySources	See notes
Туре	Collection(Capacity.Capacit ySource)	See notes
Descript ion	An array of space allocations to this volume.	See notes
LongDesc ription	Fully or partially consumed storage from a source resource. Each entry provides capacity allocation information from a named source resource.	See notes.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	No	No
Notes	Contains the information about	For each entry in the
	the providing capacity (e.g,	CapacitySource collection, map
	EnduranceGroup) for this	the information from the NVMe
	namespace. Each entry in the	specification: NVM Spec
	collection is mapped such that	Property / Field: Supported
	the CapacitySource instance	Capacity Configuration List (Log
	contains the overall capacity (in	Identifier 11h) NVM Spec:
	bytes) and the types and	Section:Figure NVMe Base
	pointers to the underlying	Specification 2.0: Section
	capacity sources.	5.16.1.17: Figures 250 and 251.

## **6.5.2.9 Description** The mapping for Description is summarized in Table 147.

Table 147: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Mandatory	

Notes In Redfish, Description is a read-only field.	NVMe / NVMe-oF  Return the common description: 'A Namespace is a quantity of
read-only field.	•
	non-volatile memory that may be formatted into logical blocks. When formatted, a namespace of size n is a collection of logical blocks with logical block addresses from 0 to (n-1). NVMe systems can support multiple namespaces."

### **6.5.2.10 DisplayName** The mapping for DisplayName is summarized in Table 148.

Table 148: DisplayName mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	DisplayName	N/A
Туре	String	N/A
Descript ion	A user-configurable string to name the volume.	N/A
LongDesc ription	his property shall contain a user-configurable string to name the volume.	N/A
Mandator y	Optional Recommended for NVMe Drives, as well as for more complex devices with NVMe front ends, such as opaque arrays.	

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	This contains an (end) user	
	settable "friendly" name for the	
	namespace. This may map to a	
	property that shows up in the	
	proprietary software, as long as	
	it is configurable by the end-user,	
	and is intended to contain a	
	displayable string.	

## **6.5.2.11 Identifiers** The mapping for Identifiers is summarized in Table 149.

Table 149: Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers	NVM Spec Property / Field: Identify / Namespace Identification Descriptor list (CNS 03h)NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.3, Figure
Туре	Collection(Resource.Identifier)	A variable length Namespace Identification Descriptor structures

	Redfish/Swordfish	NVMe / NVMe-oF
Descript ion	The Durable names for the storage controller.	A list of Namespace Identification Descriptor structures containing Namespace Type (i.e., IEEE Extended Unique Identifier, Namespace Globally Unique Identifier, Namespace UUID, Command Set Identifier), Namespace Identifier Length (NIDL), and Namespace ID (NID).
LongDesc ription	This property shall contain a list of all known durable names for the associated storage controller.	A list of any number of variable length Namespace Identification Descriptor structures that fit into the 4,096 byte Identify payload. All remaining bytes after the namespace identification descriptor structures should be cleared to 0h, and the host shall interpret a Namespace Identifier Descriptor Length (NIDL) value of 0h as the end of the list. The host should ignore any Namespace Identification Descriptor with a Namespace Identifier Type not supported by the host.
Mandator y	Optional	Yes
Notes	This is an array of unique identifiers for the NVM Subsystem including Namespace Type and Namespace ID.	

**6.5.2.12 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 150.

Table 150: Identifiers. Durable Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	NVM Spec Property / Field: Identify / Namespace Identification Descriptor list (CNS 03h) / Namespace Identifier (NID)NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.3, Figure 277: Bytes 04: (NIDL + 3)
Туре	Variable - see notes	Variable: See notes
Descript ion	The Durable names for the storage controller.	This field contains a value that is globally unique and assigned to the namespace when the namespace is created.
LongDesc ription	This property shall contain a list of all known durable names for the Namespace.	This field contains a value that is globally unique and assigned to the namespace when the namespace is created. This field remains fixed throughout the life of the namespace and is preserved across namespace and controller operations (e.g., Controller Level Reset, namespace format, etc.). The type of the value is specified by the Namespace Identifier Type (NIDT) field, and the size is specified by the Namespace Identifier Length (NIDL) field.
Mandator y	Optional	Yes

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	This is an array of unique identifiers for the Namespace.	The type and length of the descriptor are in the
	Type and length of descriptor are in the corresponding Identifiers.DurableNameForm at property.	corresponding Identifiers.DurableNameForm at property

# **6.5.2.13 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 151.

Table 151: Identifiers. Durable Name Format mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	NVM Spec Property / Field: Identify / Namespace Identification Descriptor list (CNS 03h) / Namespace Identifier Type (NIDT)NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.3, Figure 277: Bytes 00
Туре	Int64	Int64
Descript ion	The Durable names for the storage controller.	The Namespace Identifier data type
LongDesc ription	This property shall contain a list of the types for all known durable names for the associated storage controller. The type determines the length of the corresponding Namespace ID	The data type contained in the Namespace Identifier field and the length of that type.
Mandator y	Optional	Yes

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	This is an array of types for the unique identifiers for the NVM Subsystem. Values may be "EUI64", "NGUID", or "UUID".	Allowed values:1h = an 8-byte IEEE Extended Unique Identifier2h = a 10-byte Namespace Globally Unique Identifier.3h = an 8-byte Namespace UUID.4h = the Command Set Identifier (the command set that operates on this namespace).

# **6.5.2.14 InitializeMethod** The mapping for InitializeMethod is summarized in Table 152.

Table 152: InitializeMethod mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	InitializeMethod	N/A
Туре	Volume.InitializeMethod (enum)	N/A
Descript ion	Indicates the Initialization Method used for this volume. If InitializeMethod is not specified, the InitializeMethod should be Foreground.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall indicate the initialization method used for this volume. If InitializeMethod is not specified, the InitializeMethod should be Foreground. This value reflects the most recently used Initialization Method, and may be changed using the Initialize Action.	N/A
Mandator y	Optional Recommended for NVMe Drives, as well as for more complex devices with NVMe front ends, such as opaque arrays.	
Notes	Available values: Fast / Slow	Not in NVMe Specification today. This maps to functionality corresponding to traditional drive capabilities outside the scope of NVMe.

**6.5.2.15 Links.Controllers** The mapping for Links.Controllers is summarized in Table 153.

**Table 153:** Links.Controllers

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Controllers	N/A
Туре	Collection(StorageControlle r.StorageController)	N/A
Descript ion	An array of the Controllers associated with this volume.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This parameter shall contain an array of the controllers (of type StorageController) associated with this volume. When the volume is of type NVMe, these may be both the physical and logical controller representations.	N/A
Mandator y	Optional Mandatory for NVMe Drives and well as for more complex devices with an NVMe front end, such as opaque arrays.	
Notes	This array shall contain links to the controllers for this namespace.	These are the Redfish constructs that correspond to the Admin and IO Controllers associated with this namespace.

### **6.5.2.16 Links.Drives** The mapping for Links.Drives is summarized in Table 154.

Table 154: Links. Drives mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Drives	N/A
Туре	Collection(Drive.Drive)	N/A
Descript ion	An array of the drives to be used by the volume	N/A
LongDesc ription	This parameter shall contain an array of the drives to be used by the volume.	N/A

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional Mandatory for NVMe Drives. Not recommended for more complex devices with an NVMe front end, such as opaque arrays; for these configurations the mapping is to the underlying storage pool, rather than to drives.	
Notes	This array shall contain links to the drive object for this namespace.	Redfish construct. Not in the NVMe spec.

**6.5.2.17 LogicalUnitNumber** The mapping for LogicalUnitNumber is summarized in Table 155.

Table 155: LogicalUnitNumber mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	LogicalUnitNumber	N/A
Туре	Int64	N/A
Descript ion	Indicates the host-visible LogicalUnitNumber assigned to this Volume.	N/A
LongDesc ription	This property shall contain host-visible LogicalUnitNumber assigned to this Volume. This property shall only be used when in a single connect configuration and no StorageGroup configuration is used.	N/A
Mandator y	Optional	

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Do not use with NVMe devices. This is represented more correctly with (NVMeNamespaceProperties).N amespaceId.	Do not implement.

**6.5.2.18 MaxBlockSizeBytes** The mapping for MaxBlockSizeBytes is summarized in Table 156.

Table 156: MaxBlockSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	MaxBlockSizeBytes	NVM Spec Property / Field:
		Formatted LBA Size (FLBAS)
		retrieved in some Identify
		Namespace data structures for
		the specified NSID or the
		common namespace capabilities
		for the NVM Command Set (CNS
		00h).Refer to the applicable
		NVMe I/O Command Set
		specification for details. For
		NVMe I/O Command Sets that
		don't define this field, it is
		considered reservedNVM Spec:
		Section:Figure NVMe NVM
		Command Set Specification 1.0b
		Section 4.1.5.1: Figure 97: Bytes
		26 - Formatted LBA Size (FLBAS)
		and uses the Number LBA
		Formats (NBLAF) field defined in
		Section 4.1.5.1: Figure 97: Bytes
		25 (Number of LBA Formats)NVM
		Express NVM Zoned Namespace
		Command Set Specification 1.1b:
		Section A.5: Figure 53 (Size and
		Capacity Fields): Bytes 26.
Туре	Int64	
Descript ion	The size, in bytes, of the smallest	The LBA data size & metadata
	addressable unit, or block.	size combination that the
		namespace has been formatted with.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall contain size of the smallest addressable unit of the associated drive or device.	This field indicates the LBA data size & metadata size combination that the namespace has been formatted with.
Mandator y	Optional Recommended to not implement; however, if implemented this should have the same value as BlockSizeBytes.	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.

Redfish/Swordfish	NVMe / NVMe-oF
Notes	Refer to the applicable NVMe I/C
	Command Set specification for
	details. For NVMe I/O Command
	Sets that don't define this field,
	is considered reserved. Follow
	index in 247: Byte 26 (bits 3:0) to
	the LBA format structure to get
	the metadata size and LBA data
	size combination. These
	combined values are
	BlockSizeBytes. For NVM Expres
	Command Sets that Support
	Blocks: Bits 6:5 indicate the mo
	significant 2 bits of the Format
	Index of the supported LBA
	Format indicated in this data
	structure that was used to form
	the namespace. If the NLBAF
	field is less than or equal to 16,
	then the host should ignore
	these bits.Bit 4 indicates wheth
	or not the metadata is
	transferred at the end of the da
	LBA, creating an extended data
	LBA. (note: Bit 4 is not applicab
	when there is no metadata).Bits
	3:0 indicate the least significant
	bits of the Format Index of the
	supported LBA Format indicate
	in this data structure that was
	used to format the namespace.

#### **6.5.2.19 Name** The mapping for Name is summarized in Table 157.

Table 157: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	N/A
Туре	String	N/A
Descript ion	The name of the resource or array member.	N/A
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Name is a read-only field.	

**6.5.2.20 NVMeNamespaceProperties.NamespaceId** The mapping for NVMe-NamespaceProperties.NamespaceId is summarized in Table 158.

 Table 158:
 NVMeNamespaceProperties.NamespaceId mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceId	NVM Spec Property / Field: Identify / Namespace Identification Descriptor list (CNS 03h) / Namespace Identifier (NID)NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.3, Figure 277: Bytes 04: (NIDL+3)
Туре	String	Variable: See notes
Descript ion	The NVMe Namespace Identifier for this namespace.	This field contains a value that is globally unique and assigned to the namespace when the namespace is created.
LongDesc	This property shall contain the NVMe Namespace Identifier for this namespace. This property shall be a hex value. Namespace identifiers are not durable and do not have meaning outside the scope of the NVMe subsystem. NSID 0x0, 0xFFFFFFFF, 0xFFFFFFFE are special purpose values.	This field contains a value that is globally unique and assigned to the namespace when the namespace is created. This field remains fixed throughout the life of the namespace and is preserved across namespace and controller operations (e.g., Controller Level Reset, namespace format, etc.). The type of the value is specified by the Namespace Identifier Type (NIDT) field, and the size is specified by the Namespace Identifier Length (NIDL) field.
Mandator y	Mandatory	Identifier Length (NIDL) field. Yes

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		The type and length of the descriptor are in the
		corresponding
		Identifiers.DurableNameForm at
		property

**6.5.2.21 NVMeNamespaceProperties.IsBootCapable** The mapping for NVMe-NamespaceProperties.IsBootCapable is summarized in Table 159.

Table 159: NVMeNamespaceProperties.IsBootCapable mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope	NVMeNamespaceProperties.IsBoo	NVM Spec Property / Field:
rty	tCapable	Property Get Command / Controller
		Capabilities - CAP (Offset 00h) NVM
		Spec: Section:Figure NVMe 2.0:
		Section 3.1.3.1 (Controller
		Capabilities), Figure 36: Bits 45 -
		Boot Partition Support (BPS)
Туре	Boolean	Single bit (bool)
Descr iptio n	This property indicates whether or not the Volume contains a boot image and is capable of booting.	This bit indicates whether the controller supports Boot Partitions

	Redfish/Swordfish	NVMe / NVMe-oF
LongD escri ption	This property shall indicate whether or not the Volume contains a boot image and is capable of booting.  This property may be settable by an admin or client with visibility into the contents of the volume. This property should only be set to true when VolumeUsage is either not specified, or when VolumeUsage is set to Data or SystemData.	This bit indicates whether the controller supports Boot Partitions If this bit is set to "1", the controller supports Boot Partitions. If this bit is cleared to "0", the controller doe not support Boot Partitions
Manda tory	Optional	No
Notes		

**6.5.2.22 NVMeNamespaceProperties.IsShareable** The mapping for NVMeNames-paceProperties.IsShareable is summarized in Table 160.

 Table 160:
 NVMeNamespaceProperties.IsShareable mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.IsS hareable	NVM Spec Property / Field: Identify command / I/O Command Set Independent Identify Namespace data structure (CNS 08h) / Namespace Multi-path I/O and Namespace Sharing Capabilities (NMIC) NVM Spec: Section:Figure NVMe 2.0: Section 5.17.2.8 (I/O Command Set Independent Identify Namespace Data Structure), Figure 280: Byte 01 - Namespace Multi-path I/O and Namespace Sharing Capabilities (NMIC)
Туре	Boolean	Single bit (bool)
Descript ion	Indicates the namespace is shareable.	Indicates if the namespace is a private namespace and is able to be attached to only one controller at a time or if the namespace may be attached to two or more controllers in the NVM subsystem concurrently (i.e., may be a shared namespace)

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall indicate whether the namespace is shareable.	If set to "1", then the namespace may be attached to two or more controllers in the NVM subsystem concurrently (i.e., may be a shared namespace). Bits 7:1 are reserved. Bit 0, if cleared to "0", indicates the namespace is a private namespace and is able to be attached to only one controller at a time.
Mandator y	Optional	No
Notes		

# ${\bf 6.5.2.23\ NVMeName space Properties.} Name space Features. Supports Thin Provisioning$

The mapping for NVMeNamespaceProperties.NamespaceFeatures.SupportsThinProvisioning is summarized in Table 6.5.2.23.

**Table 161:** NVMeNamespaceProperties.NamespaceFeatures.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceFeatures.SupportsThin Provisioning	NVM Spec Property / Field: Namespace Features (NSFEAT) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilitie for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reservedNVM Spec: Section:Figure NVMe NVM Command Set Specification 1.0b Section 4.1.5.1: Figure 97: Bytes 24 - Namespace Features (NSFEAT), Bit 0 (ThinP). Single bit (bool)
Descript ion	This property indicates whether or not the NVMe Namespace supports thin provisioning.	Indicates that the namespace supports thin provisioning
LongDesc ription	This property shall indicate whether or not the NVMe Namespace supports thin provisioning. Specifically, the namespace capacity reported may be less than the namespace size.	if set to "1" indicates that the namespace supports thin provisioning. If cleared to "0" indicates that thin provisioning is not supported.
Mandator y	Mandatory	Yes

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Only Mandatory / applicable for
		the NVM Command Set and I/O
		Command Sets based on the
		NVM Command Set. Prohibited
		for all other I/O Command Sets.

SupportsThinProvisioning mapping

## $\textbf{6.5.2.24} \ \ \textbf{NVMeNamespaceProperties.} \textbf{NamespaceFeatures.} \textbf{SupportsDeallocatedOrUnwrittenLBError}$

The mapping for NVMeNamespaceProperties.NamespaceFeatures.SupportsDeallocatedOrUnvis summarized in Table 6.5.2.24.

**Table 162:** NVMeNamespaceProperties.NamespaceFeatures.

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceFeatures.SupportsDeal locatedOrUnwrittenLBError	NVM Spec Property / Field: Namespace Features (NSFEAT) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilitie for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reservedNVM Spec: Section:Figure NVMe NVM Command Set Specification 1.0b Section 4.1.5.1: Figure 97: Bytes 24 - Namespace Features (NSFEAT), Bit 2 (DAE).
Туре	Boolean	Single bit (bool)
Descript ion	This property indicates that the controller supports deallocated or unwritten logical block error for this namespace.	Indicates if the controller supports the Deallocated or Unwritten Logical Block error fo this namespace.
LongDesc ription	This property shall indicate that the controller supports deallocated or unwritten logical block error for this namespace.	If set to "1" indicates that the controller supports the Deallocated or Unwritten Logica Block error for this namespace. cleared to "0", then the controlled does not support the Deallocated or Unwritten Logica Block error for this namespace.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Mandatory	Yes
Notes		Only Mandatory / applicable for
		the NVM Command Set and I/O
		Command Sets based on the
		NVM Command Set. Prohibited
		for all other I/O Command Sets.

 $Supports Deallocated Or Unwritten LB Error\ mapping$ 

## 6.5.2.25 NVMeNamespaceProperties.NamespaceFeatures.SupportsNGUIDReuse

The mapping for NVMeNamespaceProperties.NamespaceFeatures.SupportsNGUIDReuse is summarized in Table 163.

**Table 163:** NVMeNamespaceProperties.NamespaceFeatures.SupportsNGUIDReuse mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceFeatures.SupportsNGUI DReuse	NVM Spec Property / Field: Namespace Features (NSFEAT) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilities for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reservedNVM Spec: Section:Figure NVMe NVM Command Set Specification 1.0b: Section 4.1.5.1: Figure 97: Bytes 24 - Namespace Features (NSFEAT), Bit 3 (UIDRESUSE). NVMe KV Command Set Specification 1.0b: Section 4.1.5.1 Figure 36: Bytes 24 - Namespace Feaetures (NSFEAT), Bit 3 (UIDRESUSE).
Туре	Boolean	Single bit (bool)
Descript ion	This property indicates that the namespace supports the use of an NGUID (namespace globally unique identifier) value.	Indicates if the value in the NGUID field and the value in the EUI64 field for this namespace may be reused by the controller for a new namespace created after this namespace is deleted.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall indicate that the namespace supports the use of an NGUID (namespace globally unique identifier) value.	If set to "1" indicates that the value in the NGUID field for this namespace, if non-zero, is never reused by the controller and that the value in the EUI64 field for this namespace, if non-zero, is never reused by the controller. It cleared to "0", then the NGUID value may be reused and the EUI64 value may be reused by the controller for a new namespace created after this namespace is deleted. This bit shall be cleared to "0" if both NGUID and EUI64 fields are cleared to 0h.
Mandator y	Mandatory	Yes
Notes		Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set, and the KV ommand Set. Prohibited for all other I/O Command Sets.

# ${\bf 6.5.2.26\ NVMeNames pace Properties. Names pace Features. Supports Atomic Transaction Size}$

The mapping for NVMeNamespaceProperties.NamespaceFeatures.SupportsAtomicTransaction is summarized in Table 6.5.2.26.

**Table 164:** NVMeNamespaceProperties.NamespaceFeatures.SupportsAtomicTransactionSize

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceFeatures.SupportsAtom icTransactionSize	NVM Spec Property / Field: Namespace Features (NSFEAT) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilities for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that
		don't define this field, it is considered reserved <b>NVM Spec: Section:Figure</b> NVMe NVM Command Set Specification 1.0b Section 4.1.5.1: Figure 97: Bytes 24 - Namespace Features (NSFEAT), Bit 4 (OPTPERF).
Type Descript ion	Indicates whether or not the NVM fields for Namespace preferred write granularity (NPWG), write alignment (NPWA), deallocate granularity (NPDG), deallocate alignment (NPDA) and optimimal write size (NOWS) are defined for this namespace and should be used by the host for I/O optimization.	Single bit (bool) Indicates support for the fields NPWG, NPWA, NPDG, NPDA, and NOWS for this namespace; and optimal Write Size field in NVM Sets Attributes Entry

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall indicate whether or not the NVM fields for Namespace preferred write granularity (NPWG), write alignment (NPWA), deallocate granularity (NPDG), deallocate alignment (NPDA) and optimimal write size (NOWS) are defined for this namespace and should be used by the host for I/O optimization.	If set to "1" indicates that the fields NAWUN, NAWUPF, and NACWU are defined for this namespace and should be used by the host for this namespace instead of the AWUN, AWUPF, and ACWU fields in the Identify Controller data structure. If cleared to "0", then the controller does not support the fields NAWUN, NAWUPF, and NACWU for this namespace. In this case, the host should use the AWUN, AWUPF, and ACWU fields defined in the Identify Controller data structure.
Mandator y	Mandatory	Yes
Notes		Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.

SupportsAtomicTransactionSize mapping

## ${\bf 6.5.2.27\ \ NVMeNames pace Properties.} Names pace Features. Supports IOP erformance Hints$

The mapping for NVMeNamespaceProperties.NamespaceFeatures.SupportsIOPerformanceHir is summarized in Table 6.5.2.27.

**Table 165:** NVMeNamespaceProperties.NamespaceFeatures.SupportsIOPerformanceHints

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeNamespaceProperties.Nam espaceFeatures.SupportsIOPe rformanceHints	NVM Spec Property / Field: Namespace Features (NSFEAT) retrieved in some Identify Namespace data structures for the specified NSID or the common namespace capabilitie for the NVM Command Set (CNS 00h).Refer to the applicable NVMe I/O Command Set specification for details. For NVMe I/O Command Sets that don't define this field, it is considered reservedNVM Spec: Section:Figure NVMe NVM Command Set Specification 1.0I Section 4.1.5.1: Figure 97: Bytes 24 - Namespace Features (NSFEAT), Bit 1 (NSABP).
Туре	Boolean	Single bit (bool)
Descript ion	Indicates that the Namepsace Atomic Write Unit Normal (NAWUN), Namespace Atomic Write Unit Power Fail (NAWUPF), and Namespace Atomic Compare and Write Unit (NACWU) fields are defined for this namespace and should be used by the host for this namespace instead of the controller-level properties AWUN, AWUPF, and ACWU.	indicates whether or not the fields NAWUN, NAWUPF, and NACWU are defined for this namespace and should be used by the host for this namespace instead of the AWUN, AWUPF, and ACWU fields in the Identify Controller data structure.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall indicate that the Namepsace Atomic Write Unit Normal (NAWUN), Namespace Atomic Write Unit Power Fail (NAWUPF), and Namespace Atomic Compare and Write Unit (NACWU) fields are defined for this namespace and should be used by the host for this namespace instead of the controller-level properties AWUN, AWUPF, and ACWU.	If set to "1" indicates that the fields NAWUN, NAWUPF, and NACWU are defined for this namespace and should be used by the host for this namespace instead of the AWUN, AWUPF, and ACWU fields in the Identify Controller data structure. If cleared to "0", then the controller does not support the fields NAWUN, NAWUPF, and NACWU for this namespace. In this case, the host should use the AWUN, AWUPF, and ACWU fields defined in the Identify Controller data structure
Mandator y	Mandatory	Yes
Notes		Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.

SupportsIOPerformanceHints mapping

**6.5.2.28 NVMeNamespaceProperties.LBAFormat.LBAFormatType** The mapping for NVMeNamespaceProperties.LBAFormat.LBAFormatType is summarized in Table 166.

 Table 166:
 165:
 NVMeNamespaceProperties.LBAFormat.LBAFormatType mapping

Descript ion	The size in bytes of this Volume's	This field indicates the size in
	optimum IO size.	logical blocks for optimal write
		performance for this namespace.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall contain the optimum IO size to use when performing IO on this volume. For logical disks, this is the stripe size. For physical disks, this describes the physical sector size.	This field indicates the size in logical blocks for optimal write performance for this namespace This is a 0's based value. If the OPTPERF bit is cleared to "0", then this field is reserved. The size indicated should be less than or equal to Maximum Data Transfer Size (MDTS) that is specified in units of minimum memory page size. The value of this field may change if the namespace is reformatted. The value of this field should be a multiple of Namespace Preferred Write Granularity (NPWG).
Mandator y	Optional Recommended for implementations with Endurance Groups and NVM Sets.	Optional

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Only Mandatory / applicable for
		the NVM Command Set and I/O
		Command Sets based on the
		NVM Command Set. Prohibited
		for all other I/O Command Sets.
		Convert from blocks to bytes.If
		the namespace is associated
		with an NVM set, NOWS defined
		for this namespace shall be set to
		the Optimal Write Size field
		setting defined in NVM Set
		Attributes Entry (refer to the
		Namespace Identification
		Descriptor in the NVMe Base
		Specification) for the NVM Set
		with which this namespace is
		associated. If NOWS is not
		supported, the Optimal Write
		Size field in NVM Sets Attributes
		Entry (refer to the Namespace
		Identification Descriptor in the
		NVMe Base Specification) for the
		NVM Set with which this
		namespace is associated should
		be used by the host for I/O
		optimization. Refer to the NVMe
		<b>NVM Command Set Specification</b>
		section 5.8.2 for how this field is
		utilized to improve performance
		and endurance

**6.5.2.36 ProvisioningPolicy** The mapping for ProvisioningPolicy is summarized in Table 173.

Table 173: OptimumIOSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	ProvisioningPolicy	NVM Spec Property / Field:
		Namespace Features (NSFEAT)
		retrieved in some Identify
		Namespace data structures for
		the specified NSID or the
		common namespace capabilities

		00h).Refer to the applicable
		NVMe I/O Command Set
		specification for details. For
		NVMe I/O Command Sets that
		don't define this field, it is
		considered reservedNVM Spec:
		Section:Figure NVMe NVM
		Command Set Specification 1.0b:
		Section 4.1.5.1: Figure 97: Bytes
		24 - Namespace Features
		(NSFEAT), Bit 0 (ThinP).
Туре	enum	Single Bit (BOOL)
	(DataStorageLoSCapabilities .ProvisioningPolicy)	
Descript ion	This property specifies the	Indicates that the namespace
·	volume's storage allocation, or provisioning policy.	supports thin provisioning

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall specify the volume's supported storage allocation policy.	if set to "1" indicates that the namespace supports thin provisioning. If cleared to "0" indicates that thin provisioning is not supported
Mandator y	Optional Recommended for implementations that support thin provisioning.	Mandatory
Notes	possible values: Fixed / Thin	Only Mandatory / applicable for the NVM Command Set and I/O Command Sets based on the NVM Command Set. Prohibited for all other I/O Command Sets.

## **6.5.2.37 Status.State** The mapping for Status.state is summarized in Table 174.

Table 174: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	NVM Spec Property / Field:
		Identify Command / I/O
		Command Set Independent
		Identify Namespace data
		structure (CNS 08h) / Namespace
		Status(NSTAT) NVM Spec:
		Section:Figure NVMe 2.0:
		Section 5.17.2.8: Figure 280 -
		Byte14: Namespace Status
		(NSTAT): - Bit 0: Namespace
		Ready (NRDY)
Туре	Resource.State (enum)	Boolean

	Redfish/Swordfish	NVMe / NVMe-oF
Descript ion	The known state of the resource, such as, enabled.	Indicates if the Namespace is "ready"
LongDesc	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	This field indicates the status of the namespace with the specified NSID. A value of "1" indicates that the namespace is ready. A value of "0" indicates that the namespace is not ready.
Mandator y	Mandatory	Yes
Notes	Possible values: Enabled / Disabled / StandbyOffline / StandbySare / InTest / Starting / Absent / UnavailableOffline / Deferring / Quiesced / Updating / Qualified	Namespace Ready (NRDY value = 1) maps to "Enabled".  Namespace Not Ready (NRDY value = 0) maps to "Disabled".

**6.5.2.38 Status.Health** The mapping for Status.Health is summarized in Table 175.

Table 175: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	Property Get / Controller Status (Offset 18h) / Controller Fatal Status (CSTS.CFS) - Bit 01 <b>NVM</b> <b>Spec: Section:Figure</b> NVMe 2.0: 3.1.3.6: Figure 47
Туре	Resource.Health	Bit
Descript ion	The health state of this resource in the absence of its dependent resources.	Indicates if the controller is able to communicate with host software via completion queue entries in the Admin Completion Queue or I/O Completion Queues.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	If the controller has a serious error condition and is unable to communicate with host software via completion queue entries in the Admin Completion Queue or I/O Completion Queues, then the controller may set the Controlle Fatal Status (CSTS.CFS) bit to "1" (refer to section 3.1.6). This indicates to host software that a serious error condition has occurred. When this condition occurs, host software should attempt to reset and then re-initialize the controller. The Controller Fatal Status condition is not indicated with an interrup If host software experiences timeout conditions and/or repeated errors, then host software should consult the Controller Fatal Status (CSTS.CFS) bit to determine if a more serious error has occurred
Mandator y	Mandatory	Yes
Notes	Possible Values: OK / Warning / Critical	Reference Figure 222 (NVM Subsystem Hardware Error Even Codes) bit 09h of the NVMe Base Specification.

**6.5.2.39 Status.HealthRollup** The mapping for Status.HealthRollup is summarized in Table 176.

Table 176: Status. Health Rollup mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.HealthRollup	N/A
Туре	Resource.Health	N/A
Descript ion	The overall health state from the view of this resource.	N/A
LongDesc ription	This property shall represent the health state of the resource and its dependent resources. The values shall conform to those defined in the Redfish Specification.	N/A
Mandator y	Optional	
Notes	Do not use for Namespace. There are no dependent resources.	Do not implement.

**6.5.2.40 StorageGroups** The mapping for StorageGroups is summarized in Table 177.

Table 177: StorageGroups mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StorageGroups	N/A
Туре	StorageGroupCollection.Stor ageGroupCollection	N/A
Descript ion	An array of references to Storage Groups that includes this volume.	N/A
LongDesc ription	The value of this property shall contain references to all storage groups that include this volume.	N/A
Mandator y	Do Not Implement	
Notes		

# **6.5.2.41 WriteCachePolicy** The mapping for WriteCachePolicy is summarized in Table 178.

Table 178: WriteCachePolicy mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	WriteCachePolicy	N/A
Туре	StorageGroupCollection.Stor ageGroupCollection	N/A
Descript ion	Indicates the write cache policy setting for the Volume	N/A
LongDesc ription	This property shall contain a boolean indicator of the write cache policy for the Volume.	N/A
Mandator y	Recommended	
Notes	Possible Values: WriteThrough, ProtectedWriteBack, UnprotectedWriteBack, Off. Set to "Off" when write cache disabled; set to other values when enabled.	

#### 6.6 Endurance Group

## 6.6.2 Property Mapping

# **6.6.2.1 AllocatedPools** The mapping for AllocatedPools is summarized in Table 179.

**Table 179:** Allocated Pools mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	AllocatedPools	NVM Spec: Property / Field: NVMe 2.0: Identify Command / NVM Set List (CNS 04h) NVM Spec: Section:Figure NVMe 2.0: 5.17.2.4: Figure 278
Туре	StoragePoolCollection.Stora gePoolCollection	NVM Set List
Descript ion	A reference to the collection of storage pools allocated from this storage pool.	A list of NVM sets
LongDesc ription	The value of this property shall contain a reference to the collection of storage pools allocated from this storage pool.	The data structure is an ordered list of up to 31 NVM Set Attribute Entry data structures, sorted by NVM Set Identifier, starting with the first NVM Set Identifier supported by the NVM subsystem that is equal to or greater than the NVM Set Identifier indicated in CDW11.NVMSETID and are accessible by the controller processing the command
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF	
Notes	Contains a pointer to the NVM		
	Set allocated from this		
	Endurance Group.		

**6.6.2.2 Capacity.Data.AllocatedBytes** The mapping for Capacity.Data.AllocatedBytes is summarized in Table 180.

Table 180: Capacity. Data. Allocated Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Data.AllocatedByte s	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) Total Endurance Group Capacity (TEGCAP) NVM Spec: Section:Figure NVMe 2.0: 5.116.1.10: Figure 218 Get Log Page – Endurance Group Information Log (Log Identifier 09h): Total Endurance Group Capacity (TEGCAP) (bytes 175:160)
Туре	Int64	16-Bytes
Descript ion	The number of bytes currently allocated by the storage system in this data store for this data type.	This field indicates the total NVM capacity in this Endurance Group. The value is in bytes.
LongDesc ription	The value shall be the number of bytes currently allocated by the storage system in this data store for this data type.	This field indicates the total NVM capacity in this Endurance Group. The value is in bytes. If this field is cleared to 0h, the NVM subsystem does not report the total NVM capacity in this Endurance Group.
Mandator y	Optional Mandatory for NVMe Drives.	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF	
Notes			

**6.6.2.3 Capacity.Data.ConsumedBytes** The mapping for Capacity.Data.ConsumedBytes is summarized in Table 181.

Table 181: Capacity. Data. Consumed Bytes mapping

		(UEGCAP)
LongDesc	The value shall be the number of	Total Endurance Group Capacity
ription	logical bytes currently consumed	(TEGCAP) - Unallocated
•	in this data store for this data	Endurance Group Capacity
	type.	(UEGCAP)
Mandator y	Optional Mandatory for NVMe	I/O Controller: Optional Admin
andator y	Drives.	Controller: Optional Discovery

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Total Endurance Group Capacity
		(TEGCAP): This field indicates the
		total NVM capacity in this
		Endurance Group. The value is in
		bytes. If this field is cleared to 0h
		the NVM subsystem does not
		report the total NVM capacity in
		this Endurance Group.
		<b>Unallocated Endurance Group</b>
		Capacity (UEGCAP): This field
		indicates the unallocated NVM
		capacity in this Endurance Group
		The value is in bytes. If this field
		is cleared to 0h, the NVM
		subsystem does not report the
		unallocated NVM capacity in this
		Endurance Group.

# **6.6.2.4 CapacitySources** The mapping for CapacitySources is summarized in Table 182.

Table 182: CapacitySources mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CapacitySources	See notes
Туре	Collection(Capacity.Capacit ySource)	See Notes
Descript ion	An array of space allocations to this volume.	A list of NVM Endurance Groups accessible by the controller and the Endurance Group Information Log for each Endurance Group.
LongDesc ription	Fully or partially consumed storage from a source resource. Each entry provides capacity allocation information from a named source resource.	See notes.
Mandator y	Required for NVMe Drives.	Optional

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Contains the information about	For each entry in the
	the providing capacity (e.g,	CapacitySource collection, map
	NVMSet) for this endurance	the information from the NVMe
	group. Each entry in the	specification: NVM Spec:
	collection is mapped such that	Property / Field: NVMe 2.0:
	the CapacitySource instance	Identify Command / NVM
	contains the overall capacity (in	Endurance Group List (CNS 19h)
	bytes) and the types and	and NVMe 2.0: Endurance Group
	pointers to the underlying	Information log (Log ID 09h) <b>NV</b>
	capacity sources.	Spec: Section:FigureNVMe 2.0:
		5.17.2.18: Figure 288 and NVMe
		2.0: 5.16.1.10: Figure 217. Identify
		command to access the
		Endurance Group List data
		structure (refer to section
		5.17.2.18) to determine the
		Endurance Groups that are
		accessible by the controller. To
		determine the capacity
		information for each Endurance
		Group, the host uses the Get Log
		Page command to access the
		<b>Endurance Group Information</b>
		log page (refer to section
		5.16.1.10).

**6.6.2.5 CapacitySources@odata.count** The mapping for CapacitySources@odata.count is summarized in Table 183.

Table 183: CapacitySources@odata.count mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CapacitySources@odata.coun t	NVM Spec: Property / Field:  NVMe 2.0: Identify Command /  NVM Endurance Group List (CNS  19h) NVM Spec: Section:Figure  NVMe 2.0: 5.17.2.4: Figure 278.  Bytes 00 (Number of Identifiers)  in the NVM Endurance Group List
Туре	(odata property)int64	Int64
Descript ion	Count of the number of items in the CapacitySources array.	Number of Identifiers in the NVM Endurance Group List
LongDesc ription		This field contains the number of Endurance Group Identifiers in the list. There may be up to 2,047 identifiers in the list. If this field is cleared to 0h, then no Endurance Group Identifiers are in the list.
Mandator y	Mandatory	Optional
Notes		

# **6.6.2.6 Description** The mapping for Description is summarized in Table 184.

Table 184: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Optional	
Notes	In Redfish, Description is a read-only field.	

**6.6.2.7 Links.OwningStorageResource** The mapping for Links.OwningStorageResource is summarized in Table 185.

**Table 185:** Links.OwningStorageResource mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.OwningStorageResource	N/A
Туре	Storage.Storage	N/A
Descript ion	A pointer to the Storage resource that owns or contains this StoragePool.	N/A
LongDesc ription	This shall be a pointer to the Storage resource that owns or contains this StoragePool.	N/A
Mandator y	Mandatory	
Notes	Contains a pointer to the NVM Subsystem that contains this Endurance Group.	A pointer to the owning subsystem - this is a Swordfish construct which points back to the subsystem

# **6.6.2.8 Name** The mapping for Name is summarized in Table 186.

Table 186: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	NVM Spec: Property / Field:  NVMe 2.0: Identify Command / CNS value of 19h (Endurance Group List) NVM Spec: Section:Figure NVMe 2.0: 5.17.2.18 Identify Controller data structure / CNS value of 19h to retrieve the Endurance Group List: Figure 288. This list will contain a Number of Endurance Group Identifiers equal to the Number of Identifiers (N) field in Bytes 01:00.
Туре	String	2-Bytes
Descript ion	The name of the resource or array member.	The list contains Endurance Group Identifiers of Endurance Groups that are accessible by the controller processing the command.
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	The Endurance Group List is a list of up to 2,047 Endurance Group Identifiers in increasing order that are accessible by the controller processing the command.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Mandatory	Optional (Mandatory for controllers that support Variable Capacity Management)
Notes	In Redfish, Name is a read-only field.	The Endurance Group Identifier is specified in the Log Specific Identifier field in Command Dword 11 of the Get Log Page command. Map the Endurance Group ID field to a string with the format: "0xABCD"

**6.6.2.9 NVMeProperties.NVMePoolType** The mapping for NVMeProperties.NVMePoolType is summarized in Table 187.

**Table 187:** NVMeProperties.NVMePoolType

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StoragePool.NVMePoolType	N/A
Туре	Enum	N/A
Descript ion	Indicates whether the StoragePool is used as an EnduranceGroup or an NVMSet.	N/A
LongDesc ription	This property shall indicate whether the StoragePool is used as an EnduranceGroup or an NVMSet.	N/A
Mandator y	Mandatory	
Notes	Set as "EnduranceGroup"	

**6.6.2.10** NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent The mapping for NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent is summarized in Table 188.

 Table 188:
 NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.PredictedMediaLifeLeftPer cent	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) Inverse of the "Percentage Used" field (Byte 05) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Decimal %	Decimal %
Descript ion	The percentage of reads and writes that are predicted to be available for the media.	The Inverse of the "Percentage Used" field which contains a vendor specific estimate of the percentage of life used for the Endurance Group based on the actual usage and the manufacturer's prediction of NVM life.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall contain an indicator of the percentage of life remaining in the drive's media.	The Inverse of the "Percentage Used" field which contains a vendor specific estimate of the percentage of life used for the Endurance Group based on the actual usage and the manufacturer's prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the Endurance Group has been consumed, but may not indicate an NVM failure.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited
Notes		The value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255. This value shall be updated once per power-on hour when the controller is not in a sleep state.

**6.6.2.11 NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed** The mapping for NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed is summarized in Table 189.

**Table 189:** NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie	NVM Spec: Property / Field:
	s.EndGrpLifetime.PercentUse d	NVMe 2.0: Endurance Group
		Information Log (Log Identifier
		09h) "Percentage Used" field
		(Byte 05) NVM Spec:
		Section:Figure NVMe 2.0:
		5.16.1.10: Figure 217
Туре	Int64	Decimal % from 00% - 255%
Descript ion	A vendor-specific estimate of the	Contains a vendor specific
	percent life used for the	estimate of the percentage of life
	endurance group based on the	used for the Endurance Group
	actual usage and the	based on the actual usage and
	manufacturer prediction of NVM	the manufacturer's prediction of
	life.	NVM life.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall contain A vendor-specific estimate of the percent life used for the endurance group based on the actual usage and the manufacturer prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the Endurance Group has been consumed, but may not indicate an NVM failure.  According to the NVMe and JEDEC specs, the value is allowed to exceed 100.  Percentages greater than 254 shall be represented as 255.	Contains a vendor specific estimate of the percentage of life used for the Endurance Group based on the actual usage and the manufacturer's prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the Endurance Group has been consumed, but may no indicate an NVM failure. The value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255. This value shall be updated once per power-on hour when the controller is not in a sleep state.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited
Notes		The value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255. This value shall be updated once per power-on hour when the controller is not in a sleep state. This value shall be scaled to a value between 0% - 100% Calculate resulting value as 100 - value reported (PercentageUsed).

#### ${\bf 6.6.2.12\ NVMeEnduranceGroupProperties.EndGrpLifetime.EnduranceEstimate}$

The mapping for NVMeEnduranceGroupProperties. EndGrpLifetime. EnduranceEstimate is summarized in Table 190.

**Table 190:** NVMeEnduranceGroupProperties.EndGrpLifetime.EnduranceEstimate mapping

	Redfish/Swordfish	NVMe / NVMe-oF	
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.EnduranceE stimate	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Endurance Estimate" field (Bytes 32-47) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217	
Туре	Int64	16-Bytes	
Descript ion	This property contains an estimate of the total number of data bytes that may be written to the Endurance Group over the lifetime of the Endurance Group assuming a write amplication of 1.	This field is an estimate of the total number of data bytes that may be written to the Endurance Group over the lifetime of the Endurance Group.	

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall contain an estimate of the total number of data bytes that may be written to the Endurance Group over the lifetime of the Endurance Group assuming a write amplication of 1. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates endurance estimates are unsupported.	This field is an estimate of the total number of data bytes that may be written to the Endurance Group over the lifetime of the Endurance Group assuming a write amplification of 1 (i.e., no increase in the number of write operations performed by the device beyond the number of write operations requested by a host).
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited
Notes		This value is reported in billions (i.e., a value of 1 corresponds to 1,000,000,000,000 bytes written) and is rounded up (e.g., one indicates the number of bytes written is from 1 to 1,000,000,000, three indicates the number of bytes written is from 2,000,000,001 to 3,000,000,000). A value of 0h indicates that the controller does not report an Endurance Estimate. This value shall be scaled to a value between 0% - 100% Calculate resulting value as 100 - value reported (PercentageUsed).

**6.6.2.13 NVMeEnduranceGroupProperties.EndGrpLifetime.DataUnitsRead** The mapping for NVMeEnduranceGroupProperties.EndGrpLifetime.DataUnitsRead is summarized in Table 191.

**Table 191:** NVMeEnduranceGroupProperties.EndGrpLifetime.DataUnitsRead mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.DataUnitsR ead	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Data Units Read" field (Bytes 48 - 63) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
	Int64	16-Bytes
Descript ion	The property contains the total number of data units read from this endurance group.	Contains the total number of data bytes that have been read from the Endurance Group.
LongDesc ription	The property shall contain the total number of data units read from this endurance group. This value does not include controller reads due to internal operations such as garbage collection. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported.	Contains the total number of data bytes that have been read from the Endurance Group. This value does not include controlle reads due to internal operations such as garbage collection.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		This value is reported in billions
		(i.e., a value of 1 corresponds to
		1,000,000,000 bytes read) and is
		rounded up (e.g., one indicates
		the number of bytes read is from
		1 to 1,000,000,000, three
		indicates the number of bytes
		read is from 2,000,000,001 to
		3,000,000,000). A value of 0h
		indicates that the controller does
		not report the number of Data
		Units Read

#### 6.6.2.14 NVMeEnduranceGroupProperties.EndGrpLifetime.DataUnitsWritten

The mapping for NVMeEnduranceGroupProperties. EndGrpLifetime. DataUnitsWritten is summarized in Table 192.

**Table 192:** NVMeEnduranceGroupProperties.EndGrpLifetime.DataUnitsWritten mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.DataUnitsW ritten	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Data Units Written" field (Bytes 64 - 79) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	The property contains the total number of data units written from this endurance group.	Contains the total number of data bytes that have been written to the Endurance Group
LongDesc ription	The property shall contain the total number of data units written from this endurance group. This value does not include controller writes due to internal operations such as garbage collection. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported.	Contains the total number of data bytes that have been written to the Endurance Group This value does not include controller writes due to interna operations such as garbage collection.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

Redfish/Sword	fish NVMe / NVMe-oF
Notes	This value is reported in billions
	(i.e., a value of 1 corresponds to
	1,000,000,000 bytes written) and
	is rounded up (e.g., one indicate
	the number of bytes written is
	from 1 to 1,000,000,000, three
	indicates the number of bytes
	written is from 2,000,000,001 to
	3,000,000,000). A value of 0h
	indicates that the controller doe
	not report the number of Data
	Units Written.

#### 6.6.2.15 NVMeEnduranceGroupProperties.EndGrpLifetime.MediaUnitsWritten

The mapping for NVMeEnduranceGroupProperties. EndGrpLifetime. MediaUnitsWritten is summarized in Table 193.

**Table 193:** NVMeEnduranceGroupProperties.EndGrpLifetime.MediaUnitsWritten mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.MediaUnits Written	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Media Units Written" field (Bytes 80 - 95) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	The property contains the total number of data units written from this endurance group.	Contains the total number of data bytes that have been written to the Endurance Group including both host and controller writes (e.g., garbage collection).
LongDesc ription	The property shall contain the total number of data units written from this endurance group. This value includes host and controller writes due to internal operations such as garbage collection. The value is reported in billions, where a value of 1 corresponds to 1 billion bytes written, and is rounded up. A value of zero indicates the property is unsupported.	Contains the total number of data bytes that have been written to the Endurance Group including both host and controller writes (e.g., garbage collection).

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Mandatory	I/O Controller: Optional Admin
		Controller: Optional Discovery
		Controller: Prohibited
Notes		This value is reported in billions
		(i.e., a value of 1 corresponds to
		1,000,000,000 bytes written) and
		is rounded up (e.g., one indicate
		the number of bytes written is
		from 1 to 1,000,000,000, three
		indicates the number of bytes
		written is from 2,000,000,001 to
		3,000,000,000). A value of 0h
		indicates that controller does no
		report the number of Media
		Units Written.

#### $6.6.2.16\ NV Me Endurance Group Properties. End Grp Lifetime. Host Read Command Count$

The mapping for NVMeEnduranceGroupProperties.EndGrpLifetime.HostReadCommandCount is summarized in Table 194.

**Table 194:**NVMeEnduranceGroupProperties.EndGrpLifetime.HostReadCommandCount mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.HostReadCo mmandCount	NVM Spec: Property / Field:  NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Host Read Commands" field (Bytes 96 - 111) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	This property contains the number of read commands completed by all controllers in the NVM subsystem for the Endurance Group.	Contains the number of User Data Read Access Commands completed by the controller
LongDesc ription	This property shall contain the number of read commands completed by all controllers in the NVM subsystem for the Endurance Group. For the NVM command set, the is the number of compare commands and read commands.	Contains the number of User Data Read Access Commands completed by the controller
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Refer to the specific NVMe I/O
		Command Set specification for
		the list of User Data Read Access
		Commands that affect this field.

#### $6.6.2.17\ NV Me Endurance Group Properties. End Grp Lifetime. Host Write Command Count$

The mapping for NVMeEnduranceGroupProperties. EndGrpLifetime. HostWriteCommandCount is summarized in Table 6.6.2.17.

**Table 195:**NVMeEnduranceGroupProperties.EndGrpLifetime.HostWriteCommandCount mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.HostWriteC ommandCount	NVM Spec: Property / Field:  NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Host Write Commands" field (Bytes 112 - 127) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	This property contains the number of write commands completed by all controllers in the NVM subsystem for the Endurance Group.	Contains the number of User Data Out Commands completed by the controller.
LongDesc ription	This property shall contain the number of write commands completed by all controllers in the NVM subsystem for the Endurance Group. For the NVM command set, the is the number of compare commands and write commands.	Contains the number of User Data Out Commands completed by the controller.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Refer to the specific I/O Command Set specification for
		the list of User Data Out
		Commands that affect this field.

Table: NVMeEnduranceGroupProperties.EndGrpLifetime.HostWriteCommandCount mapping

## $\textbf{6.6.2.18} \ \ \textbf{NVMeEnduranceGroupProperties.EndGrpLifetime.MediaAndDataIntegrityErrorCount}$

The mapping for NVMeEnduranceGroupProperties. EndGrpLifetime. MediaAndDataIntegrity is summarized in Table 196.

**Table 196:** NVMeEnduranceGroupProperties.EndGrpLifetime MediaAndDataIntegrityErrorCount mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.MediaAndDa taIntegrityErrorCount	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Media and Data Integrity Errors" field (Bytes 128 - 143) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	This property contains the number of occurences where the controller detected an unrecovered data integrity error for the Endurance Group.	Contains the number of occurrences where the controlle detected an unrecovered data integrity error.
LongDesc ription	This property shall contain the number of occurences where the controller detected an unrecovered data integrity error for the Endurance Group. Errors such as uncorrectable ECC, CRC checksum failure, or LBA tag mismatch are included in this field.	Contains the number of occurrences where the controlle detected an unrecovered data integrity error.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Errors such as uncorrectable ECC,
		CRC checksum failure, or LBA tag
		mismatch are included in this
		field. Errors introduced as a
		result of a Write Uncorrectable
		command (refer to the NVM
		Command Set specification) may
		or may not be included in this
		field.

## ${\bf 6.6.2.19\ NVMeEnduranceGroup Properties. End GrpLifetime. ErrorInformation LogEntry Count}$

The mapping for NVMeEnduranceGroupProperties.EndGrpLifetime.ErrorInformationLogEnt is summarized in Table 197.

**Table 197:** 

 $\label{lem:nvme} NVMe Endurance Group Properties. End GrpLifetime. Error Information Log Entry Count mapping$ 

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.EndGrpLifetime.ErrorInfor mationLogEntryCount	NVM Spec: Property / Field: NVMe 2.0: Endurance Group Information Log (Log Identifier 09h) "Number of Error Information Log Entries" field (Bytes 144 - 159) NVM Spec: Section:Figure NVMe 2.0: 5.16.1.10: Figure 217
Туре	Int64	16-Bytes
Descript ion	This property contains the number of error information log entries over the life of the controller for the endurance group.	Contains the number of Error Information log entries over the life of the controller.
LongDesc ription	This property shall contain the number of error information log entries over the life of the controller for the endurance group.	Contains the number of Error Information log entries over the life of the controller.
Mandator y	Mandatory	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited
Notes		

**6.6.2.20 NVMeSetProperties.SetIdentifier** The mapping for NVMeSetProperties.SetIdentifier is summarized in Table 198.

 Table 198:
 NVMeSetProperties. SetIdentifier

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeSetProperties.SetIdenti fier	NVM Spec: Property / Field: NVMe 2.0: Identify Command / NVM Set List (CNS 04h) NVM Spec: Section:Figure NVMe 2.0: 5.17.2.4
Туре	String	16-bits
Descript ion	A 16-bit hex value that contains the NVMe Set identifier.	This field indicates the identifier of the NVM Set in the NVM subsystem that is described by this entry.
LongDesc ription	This property shall contain a 16-bit hex value that contains the NVMe Set identifier. The NVM Set identifier is unique within a subsystem. Reserved values include 0.	This field indicates the identifier of the NVM Set in the NVM subsystem that is described by this entry. Identify Command / CNS value of 04h to retrieve the NVM Set List. The NVM Set Identifier is retrieved in bytes 00:01 of each NVM Set Attributes entry in the NVM Set List
Mandator y	Do Not Implement	Optional
Notes		

**6.6.2.21 NVMeSetProperties.OptimalWriteSizeBytes** The mapping for NVMeSet-Properties.OptimalWriteSizeBytes is summarized in Table 199.

 Table 199:
 NVMeSetProperties.OptimalWriteSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeSetProperties.OptimalWr iteSizeBytes	NVM Spec: Property / Field: NVMe 2.0: Identify Command / NVM Set List (CNS 04h) f/ Optimal Write Size NVM Spec: Section:Figure NVMe 2.0: 5.17.2.4 Identify Command / NVM Set List (CNS value of 04h to retrieve the NVM Set List): Figure 278. The Optimal Write Size is retrieved in bytes 12:15 of each NVM Set Attributes entry (Figure 279) in the NVM Set List
Туре	Int64	Bytes
Descript ion	This property contains the Optimal Write Size in Bytes for this NVMe Set.	This field indicates the size in bytes for optimal write performance.
LongDesc ription	This property shall contain the Optimal Write Size in Bytes for this NVMe Set.	This field indicates the size in bytes for optimal write performance. A value of 0h indicates that no Optimal Write Size is specified. This field should be cleared to 0h when namespaces within an NVM Set have different User Data Formats that do not allow an Optimal Write Size to be specified.
Mandator y	Do Not Implement	Optional

	Redfish/Swordfish	NVMe / NVMe-oF	
Notes			

**6.6.2.22 NVMeSetProperties.EnduranceGroupIdentifier** The mapping for NVMe-SetProperties.EnduranceGroupIdentifier is summarized in Table 200.

 Table 200:
 NVMeSetProperties. EnduranceGroupIdentifier mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeSetProperties.Endurance GroupIdentifier	N/A
Туре	String	N/A
Descript ion	A 16-bit hex value that contains the endurance group identifier.	N/A
LongDesc ription	This property shall contain a 16-bit hex value that contains the endurance group identifier. The endurance group identifier is unique within a subsystem. Reserved values include 0.	N/A
Mandator y	Do Not Implement	
Notes		Do not implement  NVMeSetProperties as part of an EnduranceGroup.

**6.6.2.23 NVMeSetProperties.Random4kReadTypicalNanoSeconds** The mapping for NVMeSetProperties.Random4kReadTypicalNanoSeconds is summarized in Table 201.

 Table 201:
 NVMeSetProperties.Random4kReadTypicalNanoSeconds mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeSetProperties.Random4kR eadTypicalNanoSeconds	N/A
Туре	Int64	N/A
Descript ion	Indicates the typical time to complete a 4k read in 100 Nano-second units when the NVM Set is in a Predictable Latency Mode Deterministic Window and there is 1 outstanding command per NVM Set.	N/A
LongDesc ription	This property shall contain the typical time to complete a 4k read in 100 nano-second units when the NVM Set is in a Predictable Latency Mode Deterministic Window and there is 1 outstanding command per NVM Set.	N/A
Mandator y	Do Not Implement	
Notes	Do not implement  NVMeSetProperties as part of an EnduranceGroup.	

**6.6.2.24 Status.Health** The mapping for Status.Health is summarized in Table 202.

Table 202: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	NVM Spec: Property / Field:  NVMe 2.0: Get Log Page –  Endurance Group Information  Log (Log Identifier 09h) / Critical  Warning NVM Spec:  Section:Figure NVMe 2.0:  5.16.1.10: Figure 217 / Critical  Warning (bytes 00)
Туре	Resource.Health	Bit value
Descript ion	The health state of this resource in the absence of its dependent resources.	This field indicates critical warnings for the state of the Endurance Group.
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	This field indicates critical warnings for the state of the Endurance Group. Each bit corresponds to a critical warning type; multiple bits may be set to "1". If a bit is cleared to "0", then that critical warning does not apply. Critical warnings may result in an asynchronous event notification to the host. Bits in this field represent the current associated state and are not persistent.
Mandator y	Optional	I/O Controller: Optional Admin Controller: Optional Discovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible Values: OK / Warning /	If bit 3 is set to "1", then all
	Critical	namespaces in the Endurance
		Group have been placed in read
		only mode for reasons other than
		a change in the write protect
		state of the namespace. The
		controller shall not set this bit to
		"1" if the read-only condition on
		the Endurance Group is a result
		of a change in the write
		protection state of all
		namespaces in the Endurance
		Group. If bit 2 is set to "1", then
		the Endurance Group reliability
		has been degraded due to
		significant media related errors
		or any internal error that
		degrades NVM subsystem
		reliability. if bit 0 is set to "1",
		then the available spare capacity
		of the Endurance Group has
		fallen below the threshold.

# **6.6.2.25 Status.State** The mapping for Status. State is summarized in Table 203.

Table 203: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	N/A
Туре	Resource.State (enum)	N/A
Descript ion	The known state of the resource, such as, enabled.	N/A
LongDesc	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	N/A
Mandator y	Do Not Implement	Do not implement
Notes	Possible values: Enabled / Disabled / StandbyOffline / StandbySare / InTest / Starting / ABsent / UnavaialableOffline / Deferring / Quiesced / Updating / Qualified	There is not a clear mapping for State of an Endurance Group. Do not implement this property.

#### 6.7 NVM Set

The Redfish/Swordfish Storage Pool schema is used to represent an NVM Set.

#### 6.7.1 Mockup

The following mockup shows a sample representation of the Storage Pool schema used to represent an NVM Set.

```
{
  "@odata.type": "#StoragePool.v1_7_1.StoragePool",

}
```

## 6.7.2 Property Mapping

**6.7.2.1 AllocatedVolumes** The mapping for AllocatedVolumes is summarized in Table 204.

Table 204: Allocated Volumes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	AllocatedVolumes	N/A
Туре	VolumeCollection.VolumeColl ection	N/A
Descript ion	A reference to the collection of volumes allocated from this storage pool.	N/A
LongDesc ription	The value of this property shall contain a reference to the collection of volumes allocated from this storage pool.	N/A
Mandator y	Mandatory	
Notes	A pointer to the set of namespaces allocated from this NVM Set.	The allocated volumes contains pointers to the allocated volumes objects. These are the set of namespaces created from this NVM Set.

# **6.7.2.2 Capacity.Data.AllocatedBytes** The mapping for Capacity.Data.AllocatedBytes is summarized in Table 205

Table 205: Capacity. Data. Allocated Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF	
Property	Capacity.Data.AllocatedByte s	NVM Spec Property / Field: Identify Command / NVM Set List (CNS 04h) / NVM Set Attributes Entry / Total NVM Set Capacity NVM Spec: Section:Figure NVMe 2.0: Section 5.15.2.4, Figure 278: NVM Set Attributes List / Figure 279: NVM Set Attributes Entry: Bytes 16-31 (Total NVM Set Capacity)	
Туре	Int64	16 Bytes	
Descript ion	The number of bytes currently allocated by the storage system in this data store for this data type.	This field indicates the total NVM capacity in this NVM Set.	
LongDesc ription	The value shall be the number of bytes currently allocated by the storage system in this data store for this data type.	This value shall be the total NVM capacity in this NVM Set. The value is in bytes.	
Mandator y	Mandatory	Mandatory	
Notes			

**6.7.2.3 Capacity.Data.ConsumedBytes** The mapping for Capacity.Data.ConsumedBytes is summarized in Table 206.

Table 206: Capacity.Data.ConsumedBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Capacity.Data.ConsumedBytes	NVM Spec Property / Field: Identify Command / NVM Set List (CNS 04h) / NVM Set Attributes Entry / Unallocated NVM Set Capacity NVM Spec: Section:Figure NVMe 2.0: Section 5.15.2.4, Figure 278: NVM Set Attributes List / Figure 279: NVM Set Attributes Entry: Bytes 32 - 47 (Unallocated NVM Set Capacity)
Туре	Int64	16 Bytes
Descript ion	The maximum number of bytes that can be allocated in this data store for this data type.	This field indicates the unallocated NVM capacity in this NVM Set.
LongDesc ription	The value shall be the maximum number of bytes that can be allocated in this data store for this data type.	This field indicates the unallocated NVM capacity in this NVM Set. The value is in bytes.
Mandator y	Mandatory	Optional
Notes		This is calculated as "Total NVM Set Capacity" - "Unallocated NVM Set Capacity".

**6.7.2.4 CapacitySources** The mapping for CapacitySources is summarized in Table 207.

Table 207: CapacitySources mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CapacitySources	N/A
Туре	Collection(Capacity.Capacit ySource)	N/A
Descript ion	An array of space allocations to this volume.	N/A
LongDesc ription	Fully or partially consumed storage from a source resource. Each entry provides capacity allocation information from a named source resource.	N/A
Mandator y	Optional Recommended to not implement for NVMe Drives.	DNI
Notes	Contains the information about the providing capacity (e.g, memory) for this namespace.	

**6.7.2.5 CapacitySources@odata.count** The mapping for CapacitySources@odata.count is summarized in Table 208.

Table 208: CapacitySources@odata.count mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	CapacitySources@odat a.count	N/A
Туре	(odata property)int64	N/A
Description	Count of the number of items in the CapacitySources array.	N/A
ongDescription		N/A
Mandatory	Optional Do Not Implement for NVMe Drives.	DNI
Votes		

# **6.7.2.6 Description** The mapping for Description is summarized in Table 209.

Table 209: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	See note below.
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Optional	
Notes	In Redfish, Description is a read-only field.	Return the common description: "An NVM Set is a collection of NVM that is separate (logically and potentially physically) from NVM in other NVM Sets. One or more namespaces may be created within an NVM Set and those namespaces inherit the attributes of the NVM Set. A namespace is wholly contained within a single NVM Set and shal not span more than one NVM Set."

**6.7.2.7 Links.OwningStorageResource** The mapping for Links.OwningStorageResource is summarized in Table 210.

**Table 210:** Links.OwningStorageResource mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.OwningStorageResource	N/A
Туре	Storage.Storage	N/A
Descript ion	A pointer to the Storage resource that owns or contains this StoragePool.	N/A
LongDesc ription	This shall be a pointer to the Storage resource that owns or contains this StoragePool.	N/A
Mandator y	Mandatory	
Notes	Contains a pointer to the NVM Subsystem that contains this NVM Set.	

# **6.7.2.8 Name** The mapping for Name is summarized in Table 211

Table 211: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	NVM Spec Property / Field: Identify Command / NVM Set List (CNS 04h) / NVM Set Attributes Entry / NVM Set Identifier NVM Spec: Section:Figure NVMe 2.0: Section 5.15.2.4, Figure 278: NVM Set Attributes List / Figure 279: NVM Set Attributes Entry: Bytes 00 - 01 (NVM Set Identifier)
Туре	String	16-bit value
Descript ion	The name of the resource or array member.	This field specifies the NVM Set ID
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	This field specifies the NVM Set ID. An NVM Set Identifier is a 16-bit value that specifies the NVM Set
Mandator y	Mandatory	
Notes	In Redfish, Name is a read-only field.	Map the NVMSETID field to a string with the format: "0xABCD"

**6.7.2.9 NVMeProperties.NVMePoolType** The mapping for NVMeProperties.NVMePoolType is summarized in Table 212.

**Table 212:** NVMeProperties.NVMePoolType

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StoragePool.NVMePoolType	N/A
Туре	Enum	N/A
Descript ion	Indicates whether the StoragePool is used as an EnduranceGroup or an NVMSet.	N/A
LongDesc ription	This property shall indicate whether the StoragePool is used as an EnduranceGroup or an NVMSet.	N/A
Mandator y	Mandatory	
Notes	Set as "NVMSet"	

**6.7.2.10 NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent** The mapping for NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent is summarized in Table 213.

 Table 213:
 NVMeEnduranceGroupProperties.PredictedMediaLifeLeftPercent mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NVMeEnduranceGroupPropertie s.PredictedMediaLifeLeftPer cent	N/A
Туре	Decimal %	N/A
Descript ion	The percentage of reads and writes that are predicted to be available for the media.	N/A
LongDesc ription	This property shall contain an indicator of the percentage of life remaining in the drive's media.	N/A
Mandator y	Do Not Implement	DNI
Notes		

**6.7.2.11 NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed** The mapping for NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed is summarized in Table 214.

**Table 214:** NVMeEnduranceGroupProperties.EndGrpLifetime.PercentUsed mapping

Property NVMeEnduranceGroupPropertie s.EndGrpLifetime.PercentUse d  Type Int64 N/A  Descript ion A vendor-specific estimate of the percent life used for the endurance group based on the actual usage and the manufacturer prediction of NVM life.  LongDesc This property shall contain A N/A  ription vendor-specific estimate of the percent life used for the endurance group based on the actual usage and the manufacturer prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the Endurance Group has been consumed, but may not indicate an NVM failure.  According to the NVMe and JEDEC specs, the value is allowed to exceed 100.  Percentages greater than 254 shall be represented as 255.  Mandator y Do Not Implement DNI		Redfish/Swordfish	NVMe / NVMe-oF
Descript ion A vendor-specific estimate of the percent life used for the endurance group based on the actual usage and the manufacturer prediction of NVM life. Туре	Int64	Int 64
Descript ion	Indicates the unallocated capacity of the NVMe Set in bytes.	This field indicates the unallocated NVM capacity in this NVM Set.
LongDesc ription	This property shall contain the unallocated capacity of the NVMe Set in bytes.	This field indicates the unallocated NVM capacity in this NVM Set. The value is in bytes.
Mandator y	Mandatory	
Notes		

**6.7.2.25 Status.State** The mapping for Status. State is summarized in Table 228.

Table 228: Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	N/A
Туре	Resource.State (enum)	N/A
Descript ion	The known state of the resource, such as, enabled.	N/A
LongDesc	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but it can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	N/A
Mandator y	Optional	DNI
Notes	Possible values: Enabled / Disabled / StandbyOffline / StandbySpare / InTest / Starting / ABsent / UnavaialableOffline / Deferring / Quiesced / Updating / Qualified	

**6.7.2.26 Status.Health** The mapping for Status.Health is summarized in Table 229.

Table 229: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	N/A
Туре	Resource.Health	N/A
Descript ion	The health state of this resource in the absence of its dependent resources.	N/A
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	N/A
Mandator y	Optional	DNI
Notes	Possible Values: OK / Warning / Critical	

#### 6.7.3 NVMe Domains

**6.7.3.1 Overview** NVMe Domains are used to subdivide an NVM Subsystem. NVMe domains are different from traditional fault domains. For example, if there are multiple power sources, the domain is used to represent the scope of each power source.

NVMeDomains contain a collection of domain members; these can be NVM controllers, endurance groups, NVM sets, namespaces, and ports, as illustrated in Figure ??.

NVMeDomains also may support Asymmetric Namespace Access for domain members.

**6.7.3.2 Explanation of Object use** The domain object contains two primary elements: the domain members collection, which contains pointers to the relevant controllers, groups, sets, namespaces, and ports that reflect the appropriate subdivision for the purpose of the domain.

The other primary element includes a set of capacity information properties about this set of domain members.

#### 6.7.4 Mockup

The following mockup shows a sample representation of an NVMe Domain, which contains an IO Controller and a single namespace.

```
"@odata.id": "/redfish/v1/Storage/NVMeoF-SS1/Volumes/LogicalNS1"
        ]

### 6.7.5 Property Mapping

**6.7.5.1 ANAGroupID** The mapping for ANAGroupID is summarized in Table 230.

Table 230: ANAGroupID mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope rty	ANAGroupID  Edm.Decimal	Retrieved in the Identify CommandANA Group ID retrieved in the I/O Command Set Independent Identify Namespace data structure (CNS 08h) or in the Identify Namespace data structure for the specified NSID or the NVM Command Set Identify Namespace Data Structure (CNS 00h)NVMe Base Specification: Section 5.17.2.8 Figure 280: Bytes 07:04 - ANA Group Identifier (ANAGRPID) NVMe NVM Command Set Specification: Section 4.1.5.1: Figure 97: Bytes 92:95 ANA Group Identifier (ANAGRPID) DWORD (4 bytes)
Descr iptio n	The ANA group id for all namespaces within the domain.	The ANA Group Identifier associated with all namespaces in an ANA Group described by an ANA Group Descriptor. All namespaces in an ANA Group described by an ANA Group Descriptor shall have the same ANA Group ID (ANAGroupID).

	Redfish/Swordfish	NVMe / NVMe-oF
LongD escri ption	This shall contain the ANA group id which applies to all namespaces within the domain. This corresponds to the value in the ANAGroupId field in volume.	The ANA Group Identifier associated with all namespaces in an ANA Group described by an ANA Group Descriptor. When retrieved via the Identify Command (Command dword 11) For NSID other than FFFFFFFFh, this field indicates the ANA Group Identifier of the ANA group of which the namespace is a member. Each namespace that is attached to a controller that supports Asymmetric Namespace Access Reporting (refer to the CMIC field) shall report a valid ANAGRPID
Optio nal		Optional
Notes		The ANA Group Identifier (ANAGRPID) for each ANA Group shall be unique within an NVM subsystem. If the controller does not support Asymmetric Namespace Access Reporting, then this field shall be cleared to 0h.

**6.7.5.2 FirmwareImages** The mapping for FirmwareImages is summarized in Table 231.

Table 231: FirmwareImages mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	FirmwareImages	N/A
Туре	Collection(SoftwareInventor y.SoftwareInventory)	N/A
Descript ion	Contains an array of pointers to available firmware images.	N/A
LongDesc ription	This property shall contain an array of pointers to available firmware images.	N/A
Mandator y	Mandatory	
Notes	This contains a pointer to another collection within the RF/SF service (the update service). Within this service, the firmware images may contain pointers to images corresponding to either NVMe	
	device slots or to external firmware blobs.	

**6.7.5.3 TotalDomainCapacityBytes** The mapping for TotalDomainCapacityBytes is summarized in Table 232.

 Table 232:
 Total Domain Capacity Bytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Prope	TotalDomainCapacityBytes	Retrieved in the Identify CommandFo
rty		an NVM subsystem that does not
		support multiple domains, the
		capacity information reported in the
		TNVMCap field of the Identify
		Controller data structure (CNS 01h) fo
		the controller processing the
		command. For an NVM subsystem
		that supports multiple domains, the
		Identify command may be used to
		access the Domain List data structure
		(CNS 18h) to determine the domains
		that are accessible by the controller
		and the Total Domain Capacity for
		each of those domains.For an NVM
		subsystem that does not support
		multiple domains: NVMe Base
		Specification: Section 5.17.2.1: Figure
		275: Bytes 295:280 - Total NVM
		Capacity (TNVMCAP)For an NVM
		subsystem that supports multiple
		domains: Section 5.17.2.17: Figure 286
		- Domain List; select the entry for the
		Domain beginning at Byte 128
		(domain entries are 256 Bytes in
		length) and retrieving the Total
		Domain Capacity for the Domain
		(Bytes 16:31) in the Domain Attributes
		Entry data structure
Туре	Edm.Int64	Bytes (16)
		- · · · · · · · · · · · · · · · · · · ·

	Redfish/Swordfish	NVMe / NVMe-oF
Descr iptio n	The total capacity in bytes of this NVMe Domain.	Indicates the total NVM capacity in this Domain.
LongD escri ption	This property shall contain the total capacity in bytes of this NVMe Domain.	For an NVM subsystem that does not support multiple domains: This field indicates the total NVM capacity that is accessible by the controller. For an NVM subsystem that supports multiple domains: This field indicates the total NVM capacity in this Domain.
Manda		For an NVM subsystem that does not
tory		support multiple domains: Total NVM Capacity (TNVMCAP) is mandatory if the Namespace Management capability is supported or if the Capacity Management capability is supported. For an NVM subsystem that supports multiple domains: The Domain List is Mandatory for controllers that support Capacity Management in an NVM subsystem that supports multiple domains.
Notes		that supports multiple domains.

**6.7.5.4 UnallocatedDomainCapacityBytes** The mapping for UnallocatedDomainCapacityBytes is summarized in Table 233.

 Table 233:
 UnallocatedDomainCapacityBytes

	Redfish/Swordfish	NVMe / NVMe-oF
Prope	UnallocatedDomainCapacityByte s	Retrieved in the Identify
rty		CommandFor an NVM subsystem
		that does not support multiple
		domains, the capacity information
		reported in the Unallocated NVM
		Capacity (UNVMCAP) field of the
		Identify Controller data structure
		(CNS 01h) for the controller
		processing the command.For an
		NVM subsystem that supports
		multiple domains, the Identify
		command may be used to access
		the Domain List data structure (CN
		18h) to determine the domains tha
		are accessible by the controller and
		the Unallocated Domain Capacity
		for each of those domains.For an
		NVM subsystem that does not
		support multiple domains: NVMe
		Base Specification: Section 5.17.2.1
		Figure 275: Bytes 296: 311 -
		Unallocated NVM Capacity
		(UNVMCAP)For an NVM subsystem
		that supports multiple domains:
		Section 5.17.2.17: Figure 286 -
		Domain List; select the entry for th
		Domain beginning at Byte 128
		(domain entries are 256 Bytes in
		length) and retrieving the
		Unallocated Domain Capacity for
		the Domain (Bytes 32:47) in the
		Domain Attributes Entry data
		structure

	Redfish/Swordfish	NVMe / NVMe-oF
Туре	Edm.Int64	Bytes (16)
Descr iptio n	The total capacity in bytes of this NVMe Domain.	Indicates the unallocated NVM capacity in this Domain.
LongD escri ption	This property shall contain the total capacity in bytes of this NVMe Domain.	For an NVM subsystem that does not support multiple domains: This field indicates the unallocated NVM capacity that is accessible by the controller. For an NVM subsystem that supports multiple domains: This field indicates the total NVM capacity in this Domain.
Manda tory		For an NVM subsystem that does not support multiple domains: Unallocated NVM Capacity (UNVMCAP) is mandatory if the Namespace Management capabilit is supported or if the Capacity Management capability is supported. For an NVM subsystem that supports multiple domains: The Domain List and the Unallocated Domain Capacity for the domain is Mandatory for controllers that support Capacity Management in an NVM subsystem that supports multiple domains (refer to section 3.2.4).

**6.7.5.5 MaximumCapacityPerEnduranceGroupBytes** The mapping for MaximumCapacityPerEndurance is summarized in Table 234.

**Table 234:** MaximumCapacityPerEnduranceGroupBytes

	Redfish/Swordfish	NVMe / NVMe-oF
Prope rty	MaximumCapacityPerEnduranceGr oupBytes	The list of Endurance Groups may be retrieved in the Identify Command with the Endurance Group ID CNS value (19h)The Total Endurance Group Capacity (TEGCAP) may be retrieved in the Endurance Group Log Page (Log ID 09h) by supplying a valid Endurance Group IDNVMe Basse Specification 2.0 Section 5.16.1.0: Figure 217 - Total Endurance Group Capacity (TEGCAP): Bytes 160:175)
Туре	Edm.Int64	Bytes (16)
Descr iptio n	The maximum capacity per endurance group in bytes of this NVMe Domain.	
LongD escri ption	This property shall contain the maximum capacity per endurance group in bytes of this NVMe Domain.	
Optio		Optional: An NVM subsystem that
nal		does not support multiple Endurance Groups does not require reporting of Endurance Groups
Notes		

**6.7.5.6 MaxNamespacesSupportedPerController** The mapping for MaxNamespaces Supported PerCon is summarized in Table 235.

 Table 235:
 MaxNamespacesSupportedPerController

	Redfish/Swordfish	NVMe / NVMe-oF
Prope	MaxNamespacesSupportedPerCont roller	Retrieved in the Identify CommandNVM Spec Property / Field: Identify Controller Data Structure, I/O Command Set Independent / Maximum I/O Controller Namespace Attachments (MAXCNA) NVMe Base Specification 2.0: Section 5.17.2.1: Figure 275: Identify – Identify Controller Data Structure, I/O Command Set Independent: Bytes 560:563 - Maximum I/O Controller Namespace Attachments (MAXCNA)
Туре	Edm.Decimal	Bytes (4)
Descr iptio n	The maximum number of namespace attachments of this NVMe Domain.	This field Indicates the maximum number of namespaces that are allowed to be attached to this I/O controller.
LongD escri ption	This property shall contain the maximum number of namespace attachments supported in this NVMe Domain. If there are no limits imposed, this property should not be implemented.	This field Indicates the maximum number of namespaces that are allowed to be attached to this I/O controller.
Optio nal		Optional

Redfish/Swordfish	NVMe / NVMe-oF
Notes	The value of this field shall be less
	than or equal to the number of
	namespaces supported by the NVM
	subsystem - refer to the MNAN field
	in the NVMe Base Specification 2.0
	Section 5.17.2.1: Figure 275: Identif
	<ul> <li>Identify Controller Data Structure</li> </ul>
	I/O Command Set Independent:
	Bytes 540:543 - Maximum Number
	of Allowed Namespaces (MNAN). If
	this field is cleared to 0h, then no
	maximum is specified.

### 6.8 Drive

The Redfish/Swordfish Drive schema represent the physical attributes of an NVMe drive object.

### 6.8.1 Mockup

The following mockup shows a sample representation of the Volume schema used to represent an NVM Namespace.

		20h and 64h Further information
		on NVM Subsystem Reset Control
		(NSSRC): NVMe 2.0: Section
		3.1.3.7: Figure 48 and NVM
		Subsystem Shutdown Control
		(NSSD): NVMe 2.0: Section
		3.1.3.20: Figure 61
Туре	Action (Special form of POST)	NVMe Administrative command
Descript ion	This action resets this drive.	This is used to initiate a
·		controller reset or shutdown
		depending on the control offset
		used.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This action shall reset this drive.	NVM Subsystem Reset Control
ription		(NSSRC): A write of the value
		4E564D65h ("NVMe") to this field
		initiates an NVM Subsystem
		Reset. NVM Subsystem
		Shutdown Control (NSSC): A
		write of the value 4E726D6Ch
		("Nrml") to this field initiates a
		normal NVM Subsystem
		Shutdown on every controller (
		in the domain associated with
		the controller when CAP.CPS is
		set to 10b as specified in section
		3.6.3.1; or • in the NVM subsystem
		when CAP.CPS is set to 11b in the
		NVM subsystem as specified in
		section 3.6.3.2. A write of the
		value 41627074h ("Abpt") to this
		field initiates an abrupt NVM
		subsystem shutdown on every
		controller: • in the domain
		associated with the controller
		when CAP.CPS is set to 10b as
		specified in section 3.6.3.1; in the
		NVM subsystem when CAP.CPS is
		set to 11b in the NVM subsystem
Mandator y	Optional Mandatory for NVMe Drives	Optional

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	This action has a mandatory	Usage: A normal NVM
	property of "ResetType", which	Subysystem shutdown maps to
	can be any of	GracefulShutdown; Subsystem
	On/ForceOff/GracefulShutdow	Reset maps to ForceRestart;

	Restart/ForceOn/PushPowerBu	maps to ForceOff. If an
	tton/PowerCycle.	implementation that supports
		the functionality, then they may
		implement PowerCycle.

**6.8.2.2 Actions.#Drive.SecureErase** The mapping for Actions. #Drive. SecureErase is summarized in Table 237.

Table 237: Actions.#Drive.SecureErase mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Actions.#Drive.SecureErase	NVM Spec Property / Field:
		Sanitize Operation NVM Spec:
		Section:Figure NVM Base
		Specification 2.0: 5.24 Sanitize
		Command NVM Base
		Specification 2.0: Section 8.21
		Sanitize Operations NVM Base
		Specification 2.0: Annex A
		"Sanitize Operation
		Considerations (Informative)"
Туре	Action (Special form of POST)	NVMe Administrative command
Descript ion	This action securely erases the contents of the drive.	The sanitize administrative command operation makes all user data previously written to the device inaccessible.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This action shall securely erase the drive.	The Sanitize command is used to start a sanitize operation or to recover from a previously failed sanitize operation. All user data in the NVM subsystem is altered such that recovery of the previous user data from any cache or the non-volatile media is not possible.
Mandator y	Mandatory	Optional
Notes	The action parameter SanitizationType supported are: BlockErase, CryptographicErase, and Overwrite. When Overwrite is used, OverwritePasses must also be specified.	Maps to sanitize. Implementation can support any variant. The sanitize operation types that may be supported are Block Erase, Crypto Erase, and Overwrite. All sanitize operations are processed in the background (i.e., completion of the Sanitize command does not indicate completion of the sanitize operation)

**6.8.2.3 Assembly.BinaryDataURI** The mapping for Assembly.BinaryDataURI is summarized in Table 238.

Table 238: Assembly.BinaryDataURI mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Assembly.BinaryDataURI	N/A
Туре	String	N/A
Descript ion	The URI at which to access an image of the assembly information.	N/A
LongDesc	This property shall contain the URI at which to access an image of the assembly information, using the Redfish protocol and authentication methods. The Service provides this URI for the download of the OEM-specific binary image of the assembly data. An HTTP GET from this URI shall return a response payload of MIME time application/octet-stream. If the service supports it, an HTTP PUT to this URI shall replace the binary image of the assembly.	N/A
Mandator y	Recommended	
Notes		N/A for NVMe 2.0

**6.8.2.4 BlockSizeBytes** The mapping for BlockSizeBytes is summarized in Table 239.

Table 239: BlockSizeBytes mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	BlockSizeBytes	NVM Spec Property / Field:
		Formatted LBA Size (FLBAS)
		retrieved in some Identify
		Namespace data structures for
		the specified NSID or the
		common namespace capabilities
		for the NVM Command Set (CNS
		00h).Refer to the applicable
		NVMe I/O Command Set
		specification for details. For
		NVMe I/O Command Sets that
		don't define this field, it is
		considered reserved NVM Spec:

		Log (Log ID 09h) / Total
		Endurance Group Capacity
		(TEGCAP) <b>NVM Spec:</b>
		Section:Figure NVMe 2.0:
		5.16.1.10: Figure 217: Bytes 160 :
		175
Туре	Int64	16 Bytes
Descript ion	The number of bytes currently allocated by the storage system in this data store for this data type.	indicates the total NVM capacity in this Endurance Group.
LongDesc	The value shall be the number of	This field indicates the total NVM
ription	bytes currently allocated by the	capacity in this Endurance
	storage system in this data store	Group.
	for this data type.	
Mandator y	Mandatory	No
Notes		This value is in bytes

## **6.8.2.7 Description** The mapping for Description is summarized in Table 243.

Table 243: Description mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Description	N/A
Туре	String	N/A
Descript ion	The description of this resource.	N/A
LongDesc ription	This object represents the description of this resource. The resource values shall comply with the Redfish Specification-described requirements.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Description is a read-only field.	

# **6.8.2.8 EncryptionAbility** The mapping for EncryptionAbility is summarized in Table 244.

Table 244: EncryptionAbility mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	EncryptionAbility	N/A
Туре	Enum (EncryptionAbility)	N/A
Descript ion	The encryption ability of this drive.	N/A
LongDesc ription	This property shall contain the encryption ability for the associated drive.	N/A
Mandator y	Mandatory	
Notes	Required when encryption is supported. Available values: None/SelfEncryptingDrive/Ot her	Maps to vendor capabilities.

# **6.8.2.9 EncryptionStatus** The mapping for EncryptionStatus is summarized in Table 245.

Table 245: EncryptionStatus mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	EncryptionStatus	N/A
Туре	Drive.EncryptionStatus	N/A
Descript ion	The status of the encryption of this drive.	N/A
LongDesc ription	This property shall contain the encryption status for the associated drive.	N/A
Mandator y	Optional Mandatory when EncryptionAbility!= None	
Notes	Must be implemented and set when Encryption is enabled (EncryptionAbility will indicate encryption capability type.) Possible values: Unlocked/locked/foreign/une ncrypted	Set according to vendor specs / mapping.

**6.8.2.10 FailurePredicted** The mapping for FailurePredicted is summarized in Table 246.

Table 246: FailurePredicted mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	FailurePredicted	NVM Spec: Property / Field: -
		Persistent Event Log Log
		Identifier 0Dh) / NVM Subsystem

		is a binary "true"
Descript ion	An indication of whether this	The Persistent Event Log page
	drive currently predicts a failure	contains information about
	in the near future.	significant events not specific to
		a particular command.

Redfish/Swordfish	NVMe / NVMe-oF
This property shall indicate whether this drive currently predicts a manufacturer-defined failure.	The Persistent Event Log page contains information about significant events not specific to a particular command. The information in this log page shall be retained across power cycles and resets.
Recommended	Optional for Admin and I/O Controllers. Prohibited for Discovery Controllers
Implements the results of the SMART log data.	Reference NVMe 2.0: Section 5.16.1.14.1.5 Figure 233 for possible NVM Subsystem Hardware Error Event Codes
	This property shall indicate whether this drive currently predicts a manufacturer-defined failure.  Recommended  Implements the results of the

## **6.8.2.11 Identifiers** The mapping for Identifiers is summarized in Table 247.

Table 247: Identifiers mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers	N/A
Туре	Collection(Resource.Identifier)	N/A
Descript ion	The Durable names for the subsystem.	N/A
LongDesc ription	This property shall contain a list of all known durable names for the associated subsystem.	N/A
Mandator y	Mandatory	
Notes	This is an array of unique identifiers for the NVM Subsystem.	This is an array of unique identifiers for the NVM Subsystem

**6.8.2.12 Identifiers.DurableNameFormat** The mapping for Identifiers.DurableNameFormat is summarized in Table 248.

Table 248: Identifiers.DurableNameFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableNameForm at	N/A
Туре	Resource.v1_1_0.DurableNa meFormat	N/A
Descript ion	The format of the Durable names for the subsystem.	N/A
LongDesc ription	This specifies the format of the associated NVM Subsystem NVMe Qualified Name of type NQN. Support for this field is mandatory if the controller supports revision 1.2.1 or later as indicated in the Version register (refer to section 3.1.2).	N/A
Mandator y	Optional	
Notes	This is an enum with multiple potential values. For this particular usage in Subsystem, there will only be one instance populated, of type NQN.	

**6.8.2.13 Identifiers.DurableName** The mapping for Identifiers.DurableName is summarized in Table 249.

Table 249: Identifiers. Durable Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Identifiers.DurableName	NVM Spec: Property /
		Field:NVMe 2.0: Identify
		Command / Identify Controller

	as a UTF-8 null-terminated string.	purposes of identification and
	Refer to NVMe Base Specification,	authentication.
	section 7.9, for the definition of	
	NVMe Qualified Name. Support	
	for this field is mandatory if the	
	controller supports revision 1.2.1	
	or later as indicated in the	
	Version register (refer to section	
	3.1.2).	

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Optional	Support for this field is mandatory if the controller supports revision 1.2.1 or later as indicated in the Controller Properties Version register (refer to section 3.1.3), Figure 35, Offset 8h.
Notes	For this particular usage in Subsystem, there will only be one instance populated in the identifiers array.	

## **6.8.2.14 IndicatorLED** The mapping for IndicatorLED is summarized in Table 250.

Table 250: IndicatorLED mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	IndicatorLED	N/A
Туре	Boolean	N/A
Descript ion	An indication of whether this drive currently predicts a failure in the near future.	N/A
LongDesc ription	This property shall indicate whether this drive currently predicts a manufacturer-defined failure.	N/A
Mandator y	Do Not Implement	
Notes	This property has been deprecated. See guidance / implement the LocationIndicatorActive property instead.	

**6.8.2.15 Links.Volumes** The mapping for Links.Volume is summarized in Table 251.

Table 251: Links.Volume mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Volume	N/A
Туре	Collection(Volume.Volume)	N/A
Descript ion	An array of links to the volumes that this drive either wholly or only partially contains.	N/A
LongDesc ription	This property shall contain an array of links to resources of type Volume with which this drive is associated. This property shall include all volume resources of which this drive is a member and all volumes for which this drive acts as a spare if the hot spare type is Dedicated.	N/A
Mandator y	Mandatory	
Notes	This array shall contain links to all namespaces associated with this physical drive.	

**6.8.2.16 Links.Volumes@odata.count** The mapping for Links.Volumes@odata.count is summarized in Table 252.

Table 252: Links.Volumes@odata.count mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Links.Volumes@odata.count	N/A
Туре	(odata property)int64	N/A
Descript ion	Count of the number of items in the Links.Volume array.	N/A
LongDesc ription		N/A
Mandator y	Mandatory	
Notes		The number of namespaces is available from NVMe on a per controller basis.

## **6.8.2.17 Location** The mapping for Location is summarized in Table 253.

Table 253: Location mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Location	N/A
Туре	Collection(Resource.Locatio n)	N/A
Descript ion	The location of the drive.	N/A
LongDesc ription	This property shall contain location information of the associated drive.	N/A
Mandator y	Do Not Implement	
Notes	This property has been deprecated. See guidance / implement the PhysicalLocation property instead.	

**6.8.2.18 LocationIndicatorActive** The mapping for LocationIndicatorActive is summarized in Table 254.

Table 254: LocationIndicatorActive mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	LocationIndicatorActive	N/A
Туре	Boolean	N/A
Descript ion	An indicator allowing an operator to physically locate this resource.	N/A
LongDesc ription	This property shall contain the state of the indicator used to physically identify or locate this resource. A write to this property shall update the value of IndicatorLED in this resource, if supported, to reflect the implementation of the locating function.	N/A
Mandator y	Recommended	
Notes	This property replaces the IndicatorLED, which has been deprecated.	Comes from vendor.

**6.8.2.19 Manufacturer** The mapping for Manufacturer is summarized in Table 255.

Table 255: Manufacturer mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Manufacturer	NVM Spec Property / Field: Identify Command / Identify Controller Data structure (CNS 01h) / PCI Vendor ID (VID) NVM Spec: Section: Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 00:01
Туре	String	16-bit number in little endian format.
Descript ion	The manufacturer of this drive.	The company vendor identifier
LongDesc ription	This property shall contain the name of the organization responsible for producing the storage controller. This organization might be the entity from whom the storage controller is purchased, but this is not necessarily true.	The company vendor identifier that is assigned by the PCI SIG. This is the same value as reported in the ID register
Mandator y	Recommended	Mandatory

Redfish/Sw	vordfish	NVMe / NVMe-oF
Notes		End clients expect to see the name of the company (e.g,; Contoso, BestVendor). While the value may be filled from the IdentifyController PCI Vendor ID or SubsystemID field, it would be preferable to have this filled with the actual string value of the company name.

## **6.8.2.20 MediaType** The mapping for MediaType is summarized in Table 256.

Table 256: MediaType mapping

Redfish/Swordfish	
Realish Swordhall	NVMe / NVMe-oF
MediaType	N/A
enum (MediaType)	N/A
The type of media contained in this Drive.	N/A
This property shall contain the type of media contained in the associated drive.	N/A
Mandatory	
Possible values: HDD/SSD/SMR.	NVMe SSD Drives to report SSD.
	MediaType enum (MediaType) The type of media contained in this Drive. This property shall contain the type of media contained in the associated drive. Mandatory

## **6.8.2.21 Metrics** The mapping for Metrics is summarized in Table 257.

Table 257: Metrics mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Metrics	The DriveMetrics object contains multiple properties that map to NVMe properties, but the object itself does not have a direct mapping.
Туре	DriveMetrics.DriveMetrics	
Descript ion	The link to the metrics associated with this drive.	
LongDesc ription	This property shall contain a link to the metrics associated with this drive.	
Mandator y	Optional	
Notes		

## **6.8.2.22 Model** The mapping for Model is summarized in Table 258.

Table 258: Model mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Model	NVM Spec Property / Field: Identify Command / Identify Controller Data Structure (CNS 01h) / Model Number (MN) NVM Spec: Section: Figure NVMe 2.0: Section 5.17.2.1: Figure 275: Bytes 24:63
Туре	String	String
Descript ion	The model number for the Drive.	Model Number (MN)
LongDesc ription	This property shall contain the name by which the manufacturer generally refers to the Drive.	Contains the model number for the NVM subsystem that is assigned by the vendor as an ASCII string.
Mandator y	Mandatory	
Notes		Refer to NVMe Base specification 2.0 section 4.5.1 for unique identifier requirements. Refer to NVMe Base specification 2.0 section 1.4.2 for ASCII string requirements.

## **6.8.2.23 Multipath** The mapping for Multipath is summarized in Table 259.

Table 259: Multipath mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Multipath	NVM Spec Property / Field:
		Identify Command / Idnetify
		Controller Data Structure (CNS
		01h) / Controller Multi-Path I/O
		and Namespace Sharing
		Capabilities NVM Spec:
		Section:Figure NVMe 2.0:
		Section 5.17.2.1: Figure 275: Byte
		76
Туре	Boolean	N/A
Descript ion	An indication of whether the drive is accessible from multiple paths.	This field specifies multi-path I/O and namespace sharing capabilities of the controller and NVM subsystem

#### Redfish/Swordfish NVMe / NVMe-oF LongDesc This property shall indicate Bits 7:4 are reserved. Bit 3 if set whether the drive is accessible by ription to "1", then the NVM subsystem an initiator from multiple paths supports Asymmetric allowing for failover capabilities Namespace Access Reporting upon a path failure. (refer to section NVMe Base Specification 2.0 section 8.1). If cleared to "0", then the NVM subsystem does not support **Asymmetric Namespace Access** Reporting.Bit 2 if set to "1", then the controller is associated with an SR-IOV Virtual Function. If cleared to "0", then the controller is associated with a PCI Function or a Fabrics connection. Bit 1 if set to "1", then the NVM subsystem may contain two or more controllers. If cleared to "0", then the NVM subsystem contains only a single controller. As described in refer to section NVMe Base Specification 2.0 section 2.4.1, an NVM subsystem that contains multiple controllers may be used by multiple hosts, or may provide multiple paths for a single host.Bit 0 if set to "1", then the NVM subsystem may contain more than one NVM subsystem port. If cleared to "0", then the NVM subsystem contains only a

single NVM subsystem port.

	Redfish/Swordfish	NVMe / NVMe-oF
Mandator y	Recommended Mandatory if drive is dual-ported.	Admin: Optional I/O: Optional Discovery: Reserved
Notes		

## **6.8.2.24 Name** The mapping for Name is summarized in Table 260.

Table 260: Name mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Name	N/A
Туре	String	N/A
Descript ion	The name of the resource or array member.	N/A
LongDesc ription	This object represents the name of this resource or array member. The resource values shall comply with the Redfish Specification-described requirements. This string value shall be of the "Name" reserved word format.	N/A
Mandator y	Mandatory	
Notes	In Redfish, Name is a read-only field.	

**6.8.2.25 NegotiatedSpeedGbps** The mapping for NegotiatedSpeedGbps is summarized in Table 261.

Table 261: NegotiatedSpeedGbps mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	NegotiatedSpeedGbps	For NVMe: NVM Spec Property /
		<b>Field:</b> : For PCIe Transport:
		Offset PXCAP + Ch: PXLCAP – PCI
		Express Link Capabilities /
		Supported Link Speeds (SLS)
		<b>NVM Spec: Section:Figure</b> For
		PCIe Transport: NVM Express
		PCIe Transport Specification
		1.0b: section 3.8.5.6: Figure 53:
		Bytes 03:00For NVMe-oF: Not Applicable
Туре	Decimal	
Descript ion	The speed, in gigabit per second	This field indicates the
	(Gbit/s), at which this drive	supported Link speed(s) of the
	currently communicates to the storage controller.	associated port
LongDesc	This property shall contain	Supported Link Speeds
ription	current bus speed, in gigabit per	
	second (Gbit/s), of the	
	associated drive.	
Mandator y	Mandatory	For NVMe: Required For
		NVMe-oF: DNI
Notes		For PCIe, this is in the PCIe link
		capabilities For NVMe-oF this is
		not specified; use the value for
		the native capability.

**6.8.2.26 PhysicalLocation.Info** The mapping for PhysicalLocation.Info is summarized in Table 262.

Table 262: PhysicalLocation.Info mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PhysicalLocation.Info	N/A
Туре	String	N/A
Mandatory	Do Not Implement	
Notes	This property has been deprecated.	

**6.8.2.27 PhysicalLocation.InfoFormat** The mapping for PhysicalLocation.InfoFormat is summarized in Table 263.

**Table 263:** PhysicalLocation.InfoFormat mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PhysicalLocation.InfoFormat	N/A
Туре	String	N/A
Mandatory	Do Not Implement	
Notes	This property has been deprecated.	
	·	

**6.8.2.28 PhysicalLocation.PartLocation** The mapping for PhysicalLocation. PartLocation is summarized in Table 264.

Table 264: PhysicalLocation.PartLocation mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PhysicalLocation.PartLocati on	N/A
Туре	Boolean	N/A
Descript ion	An indication of whether the drive is accessible from multiple paths.	N/A
LongDesc ription	This property shall indicate whether the drive is accessible by an initiator from multiple paths allowing for failover capabilities upon a path failure.	N/A
Mandator y	Recommended Mandatory if drive is dual-ported.	
Notes	The drive should support this property to be filled in by a layered process (e.g., BMC).  Support for any other properties in PhysicalLocation are at the discretion of the vendor.	

**6.8.2.29 PredictedMediaLifetLeftPercent** The mapping for PredictedMediaLifetLeftPercent is summarized in Table 265.

**Table 265:** PredictedMediaLifetLeftPercent mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	PredictedMediaLifetLeftPerc ent	NVM Spec Property / Field: Get Log Page – SMART, Health Information Log (Log Identifier 02h) / Percentage Used NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3: Figure 207: Byte 05
Туре	Decimal	Decimal range: 0% - 255%
Descript ion	The percentage of reads and writes that are predicted to be available for the media.	Contains a vendor specific estimate of the percentage of NVM subsystem life used based on the actual usage and the manufacturer's prediction of NVM life.

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc ription	This property shall contain an indicator of the percentage of life remaining in the drive's media.  Mandatory	Contains a vendor specific estimate of the percentage of NVM subsystem life used based on the actual usage and the manufacturer's prediction of NVM life. A value of 100 indicates that the estimated endurance of the NVM in the NVM subsystem has been consumed, but may no indicate an NVM subsystem failure. The value is allowed to exceed 100. Percentages greater than 254 shall be represented as 255. This value shall be updated once per power-on hour (when the controller is not in a sleep state).
Notes	Maps to percentage used in SMART information log	This value shall be scaled to a value between 0% - 100% Calculate resulting value as 100 - value reported (PercentageUsed).Refer to the JEDEC JESD218A standard for SSD device life and endurance measurement techniques.

## **6.8.2.30 Protocol** The mapping for Protocol is summarized in Table 266.

Table 266: Protocol mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Protocol	N/A
Туре	Protocol.Protocol	N/A
Descript ion	The protocol that this drive currently uses to communicate to the storage controller.	N/A
LongDesc ription	This property shall contain the protocol that the associated drive currently uses to communicate to the storage controller for this system.	N/A
Mandator y	Mandatory	
Notes	Possible values (long list)	NVMe Drives shall report "NVMe"

## **6.8.2.31 Revision** The mapping for Revision is summarized in Table 267.

**Table 267:** Revision mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Revision	NVM Spec Property / Field: Identify Command / Identify Controller Data Structure (CNS 01h) / Firmware Revision (FR) NVM Spec: Section:Figure NVMe 2.0: section 5.17.2.1: Figure 275: Bytes 64:71
Туре	String	String
Descript ion	The revision of this drive. This is typically the firmware or hardware version of the drive.	Contains the currently active firmware revision, as an ASCII string, for the domain of which this controller is a part.
LongDesc ription	This property shall contain the manufacturer-defined revision for the associated drive.	Contains the currently active firmware revision, as an ASCII string, for the domain of which this controller is a part.
Mandator y	Mandatory	Mandatory
Notes		Return the currently active firmware revision information. This is the same revision information that may be retrieved with the Get Log Page command, refer to NVMe Base specification 2.0, section 5.16.1.4

## **6.8.2.32 RotationSpeedRPM** The mapping for RotationSpeedRPM is summarized in Table 268.

Table 268: RotationSpeedRPM mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	RotationSpeedRPM	NVM Spec Property / Field: Get Log Page - Rotational Media Information Log (Log ID 16h) / Nominal Rotational Speed (NRS)NVM Spec: Section:Figure NVMe 2.0: section 5.16.1.22: Figure 263: Bytes 4:5
Туре	Decimal	Decimal
Descript ion	An indication of whether the drive is accessible from multiple paths.	Nominal rotational speed in revolutions per minute while the current Power State is 0
LongDesc ription	This property shall indicate whether the drive is accessible by an initiator from multiple paths allowing for failover capabilities upon a path failure.	This log page provides rotational media information (refer to section 8.20) for Endurance Groups that store data on rotational media. The information provided is retained across power cycles and resets.
Mandator y	Optional If MediaType == SSD, Do Not Implement.	I/O Controller: OptionalAdmin Controller: ProhibitedDiscovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes		Nominal rotational speed in revolutions per minute while the current Power State is 0 Supported Values /
		Descriptions:0000h Not reported0001h This value shall not be used.FFFFh ReservedAll other values Nominal rotational
		speed in revolutions per minute while the current Power State is 0

## **6.8.2.33 SKU** The mapping for SKU is summarized in Table 269.

Table 269: SKU mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SKU	N/A
Туре	String	N/A
Descript ion	The SKU for this drive.	N/A
LongDesc ription	This property shall contain the N/A stock-keeping unit (SKU) number for this drive.	
Mandator y	Mandatory	
Notes	The drive should support this property to be filled in by a layered process (e.g., OEM manufacturing).	

# **6.8.2.34 SerialNumber** The mapping for SerialNumber is summarized in Table 270.

Table 270: SerialNumber mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SerialNumber	NVM Spec Property / Field: Identify Command / Identify Controller Data Structure (CNS 01h): Serial Number (SN) NVM Spec: Section:Figure NVMe 2.0: section 5.17.2.1: Figure 275: Bytes 04:23
Туре	String	String
Descript ion	The serial number for this drive.	Contains the serial number for the NVM subsystem that is assigned by the vendor as an ASCII string.
LongDesc ription	This property shall contain the manufacturer-allocated number that identifies the drive.	Contains the serial number for the NVM subsystem that is assigned by the vendor as an ASCII string.
Mandator y	Mandatory	I/O Controller: Mandatory Admin Controller: MandatoryDiscovery Controller: Restricted
Notes		Each identifier is in big endian format. Refer to NVMe 2.0 Base specification section 4.5.1 for unique identifier requirements. Refer to NVMe 2.0 Base specification section 1.4.2 for ASCII string requirements

## **6.8.2.35 Status.State** The mapping for Status.state is summarized in Table 271.

**Table 271:** Status. State mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.State	NVM Spec Property / Field:
		Property Get Command / CSTS
		(Offset 1Ch) – Controller Status:
		Ready (RDY) - <b>NVM Spec:</b>
		Section:Figure NVMe 2.0:
		section 3.1.3.6: Figure 47: Bit 00
Туре	Resource.State (enum)	Enum
Descript ion	The known state of the resource, such as, enabled.	This bit is set to "1" when the controller is ready to process submission queue entries after CC.EN is set to "1". This bit shall be cleared to "0" when CC.EN is cleared to "0" once the controller is ready to be re-enabled

	Redfish/Swordfish	NVMe / NVMe-oF
LongDesc	This property shall indicate whether and why this component is available. Enabled indicates the resource is available. Disabled indicates the resource has been intentionally made unavailable but can be enabled. Offline indicates the resource is unavailable intentionally and requires action to make it available. InTest indicates that the component is undergoing testing. Starting indicates that the resource is becoming available. Absent indicates the resource is physically unavailable.	This bit is set to "1" when the controller is ready to process submission queue entries after CC.EN is set to "1". This bit shall be cleared to "0" when CC.EN is cleared to "0" once the controller is ready to be re-enabled
Mandator y	Optional Mandatory for NVM Drives	Mandatory
Notes	Possible values: Enabled / Disabled / StandbyOffline / StandbySpare / InTest / Starting / Absent / UnavailableOffline / Deferring / Quiesced / Updating / Qualified	The drive should support this property to be filled in by a higher level client (e.g., BMC). The drive can self-set this drive to Enabled / Disabled / InTest /Updating. If any controller in the drive is set to Enabled, set to "Enabled". If all controllers are set to disabled, set to "Disabled". If a firmware update is in progress, set to "Updating". If the drive is running a self-test, set to "InTest".

**6.8.2.36 Status.Health** The mapping for Status.Health is summarized in Table 272.

Table 272: Status. Health mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	Status.Health	NVM Spec Property / Field: Get Log Page – SMART / Health Information Log (Log ID 02h) / Critical Warning NVM Spec: Section:Figure NVMe 2.0: Section 5.16.1.3, Figure 207: Byte 00
Туре	Resource.Health	Byte field
Descript ion	The health state of this resource in the absence of its dependent resources.	This field indicates critical warnings for the state of the controller. Each bit corresponds to a critical warning type
LongDesc ription	This property shall represent the health state of the resource without considering its dependent resources. The values shall conform to those defined in the Redfish Specification.	This field indicates critical warnings for the state of the controller. Each bit corresponds to a critical warning type; multiple bits may be set to "1". If a bit is cleared to "0", then that critical warning does not apply. Critical warnings may result in ar asynchronous event notification to the host. Bits in this field represent the current associated state and are not persistent.
Mandator y	Optional Mandatory for NVM Drives.	I/O Controller: MandatoryAdmin Controller: OptionalDiscovery Controller: Prohibited

	Redfish/Swordfish	NVMe / NVMe-oF
Notes	Possible Values: OK / Warning /	Report to same value as set for
	Critical	worst-case controller
		Status.Health. Bits /
		Definitions7:6 Reserved5 If set to
		"1", then the Persistent Memory
		Region has become read-only or

		volatile memory backup device
		has failed. This field is only valid
		if the controller has a volatile
		memory backup solution.3 If se
		to "1", then all of the media has
		been placed in read only mode.
		The controller shall not set this
		bit to "1" if the read-only
		condition on the media is a resu
		of a change in the write
		protection state of a
		namespace.2 If set to "1", then
		the NVM subsystem reliability
		has been degraded due to
		significant media related errors
		or any internal error that
		degrades NVM subsystem
		reliability.1 If set to "1", then a
		temperature is: a) greater than o
		equal to an over temperature
		threshold; or b) less than or
		equal to an under temperature
		threshold.0 If set to "1", then the
		available spare capacity has
		fallen below the threshold.

**6.8.2.37 StatusIndicator** The mapping for StatusIndicator is summarized in Table 273.

Table 273: StatusIndicator mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	StatusIndicator	N/A
Туре	enum (StatusIndicator)	N/A
Descript ion	An indication of whether the drive is accessible from multiple paths.	N/A
LongDesc ription	This property shall indicate whether the drive is accessible by an initiator from multiple paths allowing for failover capabilities upon a path failure.	N/A
Mandator y	Mandatory	
Mandator y Mandatory  Notes Multiple values possible. Relevant values for NVMe standalone drives: OK, Fail, PredictiveFailureAnalysis.		The drive should support this property to be filled in by a higher level client (e.g., BMC).  The drive can self-set this drive only to OK (or potentially fail, but only if the property has not been set by higher-level software).

**6.8.2.38 WriteCacheEnabled** The mapping for WriteCacheEnabled is summarized in Table 274.

Table 274: WriteCacheEnabled mapping

	Redfish/Swordfish	NVMe / NVMe-oF
Property	SerialNumber	NVM Spec Property / Field: Get
		Features / Volatile Write Cache
		(Feature Identifier 06h) / Volatile
		Write Cache Enable (WCE) <b>NVM</b>
		Spec: Section: Figure NVMe 2.0:
		Section 5.27.1.4: Figure 321: Bit
		00
Туре	Boolean	Boolean
Descript ion	An indication of whether the	This property shall indicate
	drive write cache is enabled.	whether the drive write cache is
		enabled.
LongDesc	This property shall indicate	This property shall indicate
ription	whether the drive write cache is	whether the drive write cache is
	enabled.	enabled.
Mandator y	Optional Mandatory for NVMe	Optional
	Drives.	
Notes		If set to "1", then the volatile
		write cache is enabled. If cleared
		to "0", then the volatile write
		cache is disabled

#### 7 Other Feature Mapping

#### 7.1 Introduction

There are additional features and functionality that are also desirable to be exposed via the Redfish/Swordfish management ecosystems; however, there is not necessarily a clear mapping for these to a specific portion of the NVMe specification, or the functionality has a large component provided by the NVMe device implementer. This section provides an overview of the required functionality and presentation required to present a common, standardized interface to the Redfish/Swordfish clients.

#### 7.2 Firmware Update

Firmware update is a required function to present comprehensive management. This is presented in Redfish through the "Update" service. The Update Service provides a standardized interface to all software and firmware update mechanisms throughout the server, storage, and networking environment, and as such, provides an abstracted, standardized interface that largely manages the acquisition from the client of the image files (and subsequent distribution of those to the designated targets), as well as very coarsegrained scheduling.

Note that this mechanism does not include any "active image" management capability (e.g., rollback).

#### 7.2.1 Firmware update for NVMe Drives

NVMe drives shall support a standard implementation of the Redfish Update service. This is fundamentally a single-step invocation process on the update service that gets the image file from a specified URI using the SimpleUpdate action.

One parameter that shall be specified is the OperationApplyTime; this indicates when to apply the image. If not explicitly specified, the implementation should assume the request is to be applied immediately.

The values of the OperationApplyTime that shall be supported by NVMe drives are: - Immediate - OnReset

Example simple update request:

The username and password parameters summarized in Table 275 may be required to access the image. Implementations should support these. Additionally, the implementation may support the Targets parameter to specify the list of devices on which to apply the image. If Targets is not specified, the image will be applied to all applicable devices.

Table 275: Additional parameters

Parameter	Туре	Description
Username	String	The user name to access the URI specified by the ImageURI parameter.
Password	String	The password to access the URI specified by the ImageURI parameter.
Targets	Array	An array of strings that are URIs to resources that indicate where to apply the image.

The SimpleUpdate mechanism is fundamentally a "pull" mechanism (the implementation pulls a file from a target); the UpdateService also supports a "push" mechanism (the client "pushes" the image to the implementation as part of the request payload) that may also be implemented. For more information this mechanism, using the MultipartHttp-PushUri property, is documented in the Redfish Specification.

**7.2.1.1 Mapping Images to NVMe Capabilities** It will be up to the implementation to determine the NVMe specific parameters to use upon receipt of the image from the up-

date service. However, the following general guidelines should be used to ensure behavioral consistency across implementations:

When receiving image: - If open slots, the implementation can choose what open slot to use, and load the image to that slot. - If all slots are full, the implementation can choose (typically any slot except the currently active image).

After loaded to a slot, the implementation will mark the image as active. Based on the "apply time" setting, the implementation setting will activate the image either immediately, or set to activate on (the next) reset.

#### 7.3 Security Management Protocols

NVMe specifies an optional channel for security protocol communication with controller devices, implemented as a pair of send and receive functions: Security Send (described in section 5.26 of NVMe) and Security Receive (section 5.25). These provide functionality equivalent to the SPC-5 SECURITY PROTOCOL IN and SECURITY PROTOCOL OUT commands.

Swordfish maps these Security Send and Security Receive commands to two StorageController actions:

- #StorageController.SecuritySend
- #StorageController.SecurityReceive

Swordfish restricts the allowable security protocol numbers to 0, 1 or 2 for the Security Receive action, and 1 or 2 for the Security Send action.

Where the security protocol data is passed as a base64-encoded string, opaque to the Swordfish/Redfish implementation.

# Appendix A: Objects without a direct mapping to the NVMe model

#### A.1: Overview

There are a number of objects that are required for the proper integration of NVMe support within Redfish and Swordfish, but which are not supported by an entity that can be mapped directly from the various NVM Specifications. Information about these related but un-mapped objects are defined elsewhere in the documentation provided with each Swordfish release.

They are summarized in Table A.1 for ease of use, including:

- Object Name
- NVMe Device Expected Usage

Table A.1: Related Objects

Object	NVMe Device Expected Usage
NetworkAdapter	NVMe-oF Subysystems, Network-Attach Drives
Port (on NetworkAdapter)	NVMe-oF Subysystems, Network-Attach Drives
NetworkDeviceFunc tion	NVMe-oF Subysystems, Network-Attach Drives
Fabric	NVMe-oF Subysystems, Network-Attach Drives and arrays
Connection	NVMe-oF Subysystems, Network-Attach Drives and arrays
Endpoint	NVMe-oF Subysystems, Network-Attach Drives and arrays
Endpoint Group	NVMe-oF Subysystems, Network-Attach Drives and arrays
Switch	NVMe-oF Subysystems, Network-Attach Drives and arrays
Port (on switch)	NVMe-oF Subysystems, Network-Attach Drives and arrays
EthernetInterface	NVMe-oF Subysystems, Network-Attach Drives and arrays, EBOF/JBOF
Manager	EBOF/JBOF, Complex devices, Arrays

Object	NVMe Device Expected Usage
NetworkProtocol	EBOF/JBOF, Complex devices, Arrays

Required usage of objects and their properties are contained in the relevant Swordfish profiles.

For example, for Ethernet-Attach drives, the NetworkAdapter, Port, and NetworkDevice-Function required properties are specified as part of the "Ethernet-Attach NVMe Drive" profile.

#### A.2: Related Use Cases

The Swordfish Scalable Storage Management API User's Guide contains real-world examples of how clients will interact with an implementation. Table A.2 summarizes the NVMe use cases as of 9 April 2024.

Table A.2: NVMe Use Case Summary

Title	Description
Attach a Namespace	Attach a Namespace
Deprovision a Namespace	Deprovision a Namespace
Detach a Namespace	Detach a Namespace
Provision a Namespace	Provision a Namespace
Provision an NVM Set with a Namespace	Provision an NVM Set associated with a Namespace
Report capacity for a Namespace	Report capacity for a Namespace
Report remaining life for a Namespace	Report remaining life for a Namespace

## **Annex B: Bibliography**

#### **B.1 Overview**

The following referenced documents provide important support for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

#### **B.2 Informational references**

The informational references are summarized in Table B.1.
